Joint Permit Application

For Work Within the Louisiana Coastal Zone

What is the purpose of the Joint Permit Application?

This Joint Permit Application was developed to facilitate the state and federal permit application process administered by the Louisiana Department of Natural Resources/Office of Coastal Management (OCM) and the U.S. Army Corps of Engineers (COE) for work within the Louisiana Coastal Zone.

To simplify the permit application process, the Joint Permit Application is a multi-purpose application. It may be used to apply for a Coastal Use Permit (CUP) and/or a Department of the Army Permit under Section 10 of the Rivers and Harbors Act and/or Section 404 of the Clean Water Act. This application may also be used to apply for a Solicitation of Views (SOV) or an OCM Request for Determination (RFD). Review the instructions below, then proceed to Step 1.

Instructions

How do I complete the Joint Permit Application?

There are two parts to the Joint Permit Application package:

1. Joint Permit Application, and
2. Maps and Drawings.

An accurate/complete application is required for processing; inaccurate/missing information may delay processing. Follow the instructions below to complete the application. Specific instructions are provided with each step.

- Type or print clearly using black or blue ink;
- Steps 1 through 16 must be completed; write “N/A” if information does not apply to your proposed project. It is not necessary to write “N/A” on the Steps that you have been asked to skip;
- When additional space is needed, include an 8½ x 11 sheet of paper identifying the Step number.

When you have questions or need assistance in completing the application package:

- Refer to the “Glossary of Terms” (See page 10.);
- Refer to “Frequently Asked Questions” (See page 11.);
- Contact the Office of Coastal Management at 1-800-267-4019 or 225-342-7591; or
- Contact your local coastal parish program (See page 11.). (http://dnr.louisiana.gov/CRM/coastmgt/interagencyaff/lcp/lcp.asp)

Step 1 of 16

Who is the applicant for the proposed project?

Note: *Applicants may be either the landowner, person or company that is responsible for the proposed project.*

Complete the following information about the applicant.

Applicant/Company Name: Blue Marlin Offshore Port LLC
Individual Person or Corporation/Company

Mailing Address:
8111 Westchester Drive
Street Address or P.O. Box
Suite 600
Unit/Apartment #
Dallas
City
TX
State
75225
Zip

Contact Information:
Justin Minter
Name of Contact Person *(not the agent)*
JUSTIN.MINTER@energytransfer.c
E-Mail Address
(409) 749-3902
Area Code Daytime Telephone Number
(_______) ________________
Area Code Fax Number

Continue to page 2 for step 2.

Internal Office Use Permit #

Step 2 of 16

Is an agent being used for the proposed project?

***Note**: An agent is not required.*

Is an agent being used for the proposed project?

☐ **NO** (If NO, proceed to Step 3.)
☑ **YES** (If YES, complete the following information.)

Company Name: EXP Energy Services
Corporation/Company

Mailing Address: 1800 West Loop South
Street Address or P.O. Box
Unit/Apartment #:
Houston
City
TX
State
77027
Zip

Contact Information: Michael Aubele
Name of Contact Person
Mike.Aubele@exp.com
E-Mail Address
(713) 985-9914
Area Code Daytime Telephone Number
(______) ________________
Area Code Fax Number

Step 3 of 16

What type of permit or action would you like to request?

***Note:** You may need the approval of other federal, state or local agencies for your project.*

***Note:** For questions concerning the CUP, SOV or RFD, call OCM at:*

- *1-800-267-4019*
  or
- *225-342-7591*

Check ☑ the appropriate box(es) to indicate the type of permit or action that you would like to request.

☑ **Coastal Use Permit (CUP), Clean Water Act Permit (Section 404), Rivers and Harbors Act (Section 10)**

The purpose of the CUP is to ensure that any activity affecting the Coastal Zone is completed in a manner that is consistent with the Louisiana Coastal Resource Program.

The purpose of the Department of the Army permit program under Section 10 of the Rivers and Harbors Act and Section 404 of the Clean Water Act is to review and evaluate proposals for dredging, filling, and/or placement of structures in waterways and wetlands in order to determine whether a permit should be granted or denied based on expected impacts to the overall public interest.

☐ **Solicitation of Views (SOV) – OCM only**

If you wish to find out if your project is in the Coastal Zone or if you wish to determine if there are special features of the area that may impact your project design you may request a SOV. No application fee is assessed for SOV requests. The following Steps must be completed to obtain an informal determination.

- Step 1, Step 2, Step 6, Step 14, Step 16; and
- Step 13 - (Vicinity plat showing project location and extent is required; cross section and plan views are useful, if available.)

☐ **Request for Determination (RFD)**

If you wish to obtain a formal determination as to whether or not a CUP would be required for a particular activity, you may submit a RFD. The appropriate application fee will be assessed for RFD requests. The following Steps must be completed to obtain a RFD.

- Step 1, Step 2, Step 5, Step 6, Step 8, Step 10, Step 14, Step 16; and;
- Step 13 - (Vicinity plat showing project location and extent is required; cross section and plan views are useful, if available.)
- If you think that no permit is required, you must provide a statement explaining why you think a permit is not required.

Step 4 of 16

Have you participated in a Pre-Application or Geological Review Meeting or obtained a wetland determination?

***Note:** To schedule a Pre-Application and/or a Geological Review Meeting, call OCM at 1-800-267-4019.*

***Note:** To apply for a wetland determination, call the COE at 504-862-1627.*

a. Have you participated in a Pre-Application or Geological Review Meeting for the proposed project?

☑ **NO** (If NO, proceed to Step 4b.) (If you would like to schedule a pre-application meeting, please call 1-800-267-4019)
☐ **YES** (If YES, complete the following information.)

Date meeting was held: ____/____/______

Attendees: ________________ ________________ ________________
Individual or Company Representative OCM Representative COE Representative

b. Have you obtained an official wetland determination from the COE for the project site?

☑ **NO** (If NO, proceed to Step 4c.)
☐ **YES** (If YES, include a copy with this application.)

JD Number:________________________________

c. Is this application a mitigation plan for another CUP?

☑ **NO** (If NO, proceed to Step 5.)
☐ **YES** (If YES, identify the permit number of the project requiring mitigation.)

OCM Permit Number: _________________________

Continue to page 3 for step 5. ↳

Step 5 of 16

What permits/ certifications have you previously requested for the proposed project?

Note: Additional sheets may be required for agency name, permit number and status information.

a. **Describe the project.**

See Sections 1.0, 1.2, 1.3, and 1.4 of the narrative

b. **Is this application a change to an existing permit?**

☑ **NO** (If NO, proceed to Step 5c.)
☐ **YES** (If YES, identify the existing permit number.)

OCM Permit Number: ____________

↘ Please explain

c. **Have you previously applied for a permit or emergency authorization for all or any part of the proposed project?**

☐ **NO** (If NO, proceed to Step 6.)
☐ **YES** (If YES, complete the following information for the proposed project.)

Agency Name	Permit Number	Decision Status Approved	Decision Status Denied	Decision Status Pending	Decision Date
OCM	P20200451	☐	☐	☐	
COE		☐	☐	☐	
Other		☐	☐	☐	

Step 6 of 16

Where will the proposed project be located?

Note: The following websites may provide assistance in completing the latitude/longitude and directions:

- *Sonris on OCM website*
- *MapQuest.com*
- *Topozone.com.*

Note: Directions may include the following:

- *Nearest town/city*
- *Highways*
- *Intersections*
- *Street names*
- *Landmarks*
- *Start/end point*

Complete the following information to identify the exact location of the proposed project.

a. **Physical Location:**

Parish: See Figure 1-1 in the narrative
City:
Zip:
Street Address (If known):
Water Body (if known):

b. **Latitude and Longitude:**

⚠ Must be included in all applications.

	Degrees	Minutes	Seconds
Latitude:	30	0	7.830
Longitude:	93	59	42.870

c. **Section, Township, Range:** *(if available)*

Section #(s)	Township # (Specify North or South)	Range # (Specify East or West)
N/A		

d. **Lot #, Tract #, Parcel # or Subdivision Name:** *(if known)*

Lot #: N/A
Parcel #:
Tract #:
Subdivision Name:

e. **Site Directions:** Directions to the proposed project site must be identified in order to process the application.

Example: **START - I-10 toward Baton Rouge. Exit #153 toward Port Allen. US-190 West/LA-1 North ramp. RIGHT onto LA-987 1/Bridge Side Road. RIGHT onto LA-986/North River Road to Popular Grove Plantation directly behind guest parking lot in rear. –END**

Start - From Baton Rouge, take I10 west towards Texas. Take Exit 873 and follow TX-73 West towards Nederland, Take right on Pure Atlantic Road (FM 366). Continue to follow FM 366, as the road name will change from Pure Atlantic Road to Magnolia Avenue. Turn right into the Nederland Terminal facility. The driveway to the facility is directly across from Spring Street in Nederland, Texas. - End

Continue to page 4 for step 7. ↳

Step 7 of 16

Who are the adjacent landowners?

Note: Adjacent landowner information is usually available through the office of the tax assessor in the parish where the project is to be developed.

Note: Additional information may be included in the area provided on page12. Also, extra sheets may be required if there are more than eight adjacent landowners.

Complete the following information to notify adjacent landowners whose property adjoins the proposed project site.

Adjacent Landowner #1: See Appendix C - Adjoining Property Owners
Name of Adjacent Landowner

Mailing Address:
Address
Unit/Apartment #
City
Parish
State
Zip

Adjacent Landowner #2:
Name of Adjacent Landowner

Mailing Address:
Address
Unit/Apartment #
City
Parish
State
Zip

Adjacent Landowner #3:
Name of Adjacent Landowner

Mailing Address:
Address
Unit/Apartment #
City
Parish
State
Zip

Adjacent Landowner #4:
Name of Adjacent Landowner

Mailing Address:
Address
Unit/Apartment #
City
Parish
State
Zip

Step 8 of 16

What is the purpose of the proposed project?

Note: We are required to review the justifications and needs for your project. Providing detailed information at the time of application may expedite processing of your proposal.

Note: Additional sheets may be required to explain why the proposed project is needed.

Complete the following information to identify the purpose and need for the proposed project.

a. Project Name and/or Title: Blue Marlin Offshore Port (BMOP) Project

b. Project Type: *(Check ☑ the appropriate box. See the "Glossary" on page 10 for the definitions of terms.)*
☐ **Non-Residential**
☐ **Residential**

c. Source of Funding ☐ ***Federal*** ☐ ***State*** ☐ ***Local*** ☑ ***Private***

d. Check ☑ the appropriate box(es) to identify what will be done for the proposed project.

☑ Bridge/Road
☐ Bulkhead/Backfill
☐ Drainage Improvements
☑ Dredging
☑ Drill Barge/Structure
☐ Other
↘ (Please specify)

☐ Drill site
☑ Fill
☐ Home Site/Driveway
☐ Levee Construction
☑ Major Industrial Commercial
☐ Marina

☐ Pilings
☑ Pipeline/Flow line
☐ Plug/Abandon
☐ Production Barge/Structure
☐ Prop Washing
☐ Remove Structures

☑ Riprap/Erosion Control
☑ Site Clearance
☐ Subdivision
☐ Vegetative Plantings
☐ Wharf/Pier/Boathouse

e. Why is the proposed project needed?

See Section 1.1 of the Narrative

Continue to page 5 for step 9. ↳

Step 9 of 16

What is the status of the proposed project?

Note: Show and identify planned, in progress, completed work and dimensions for excavations and fill on the Plan View and Cross Section Drawings.

Complete the following information to indicate the start/end dates and the current status of the proposed project.

a. Proposed project start date: 8 / 1 / 2022 **Proposed project completion date:** 3 / 1 / 2023

b. Is any of the project work in progress?

☑ **NO** (If NO, proceed to Step 9c.)

☐ **YES** (If YES, show and identify the work in progress on the Plan View and Cross Section Drawings.)

➘ Please explain

c. Is any of the project work complete?

☑ **NO** (If NO, proceed to Step 10.)

☐ **YES** (If YES, show and identify the work completed on the Plan View and Cross Section Drawings.)

➘ Please explain

Step 10 of 16

How would you describe the proposed project?

Note: To apply for a wetland determination, call the COE at 504-862-1627.

Note: Information provided in this Step must be consistent with Maps and Drawings.

Note: For any equipment used, show the access route and construction right of way on the Maps and Drawings.

Complete the following information to describe structures, materials and methods for the proposed project.

Cubic yards are determined by using this formula. *(Length (ft.)* ***X*** *Width (ft.)* ***X*** *Depth (ft.) divided by 27 = Cubic Yards)*

Example: **25 ft. X 25 ft. X 5 ft. divided by 27 = 115.7 Cubic Yards**

Acres are determined by using this formula. *(Length (ft.)* ***X*** *Width (ft.) divided by 43,560 = Acres)*

Example: **250 ft. X 250 ft. divided by 43,560 = 1.43 Acres**

a. Excavation: 1,707,775.50 **Cubic Yards** 223.13 **Acres**

b. Fill: 1,710,143.40 **Cubic Yards** 223.13 **Acres**

c. What fill materials will be used for the proposed project?

(Check ☑ the appropriate box(es) and indicate the cubic yards for each type of fill material.)

☑ Concrete	1,085.70 Cubic Yards	☑ Rock (rip/rap)	934.50 Cubic Yards
☑ Crushed Stone or Gravel	1,048.80 Cubic Yards	☐ Sand	Cubic Yards
☑ Excavated & Placed on site	1,695,264. Cubic Yards	☑ Hauled in Topsoil/Dirt	11,809.90 Cubic Yards
☑ Excavated & Hauled off site	6,511.00 Cubic Yards		
☐ Other *(Please specify)*:			Cubic Yards

d. What equipment will be used for the proposed project? *(Check ☑ the appropriate box(es).)*

☑ Airboat

☑ Backhoe

☑ Barge Mounted Bucket Dredge

☐ Barge Mounted Drilling Rig

☑ Bulldozer/Grader

☐ Dragline/Excavator

☐ Handjet

☐ Land Based Drilling Rig

☑ Marsh Buggy

☑ Other Tracked or Wheeled Vehicles

☐ Self Propelled Pipe Laying Barge

☑ Tugboat

☐ Other (Please specify.)

Continue to page 6 for step 11. ➩

Step 11 of 16

What impact will the proposed project have?

Note: *You will be notified by OCM if a field investigation is required to determine if the proposed project will impact wetlands.*

Note: *Additional sheets may be required to adequately respond to 11b, 11c, 11d and/or 11e.*

Note: *Providing detailed information at the time of application may expedite processing of your proposal.*

a. Total acres of wetlands and/or waterbottoms filled and/or excavated: Perm. 2.22 acres
Temp 779.5 acres

b. What alternative locations, methods and access routes were considered to avoid impact to wetlands and/or waterbottoms?

See Section Section 2.0 of the narrative

c. What efforts were made to minimize impact to wetlands and/or waterbottoms?

See Sections 1.5, 3.0, and 4.0 of the narrative.

d. How are unavoidable impacts to vegetated wetlands to be mitigated? (Please note that a willingness to perform mitigation does not relieve the applicant from adequately addressing justification for (step 8e) and alternatives to (step 11b & 11c) the proposed activity)

A Compensatory Mitigation Plan has been completed for the Project. See Attachment J.

Landowner Rights

- The affected landowner(s) whose property may be impacted by the proposed project has (have) the option of requesting that compensatory mitigation be done on their property.
- Once OCM determines that mitigation is required, they will notify the applicant and all affected landowners of the extent and type of habitat impacted. The landowner(s) will be given thirty (30) days to formally request or waive their mitigation option. (This can cause substantial delays in processing of the application.)

Applicant Responsibilities

- Coordinate with the affected landowner(s) to develop a conceptual compensatory mitigation plan. This plan should be designed to offset the adverse impacts to vegetated wetlands which will occur from the proposed project. (This can also cause substantial delays in processing of the application.)
- To avoid delays, it is recommended that, prior to sending the application to OCM, you contact affected landowner(s) to:

  – Inform them of possible wetland impacts and discuss their compensatory mitigation rights; and
  –Ask them to indicate their intentions regarding compensatory mitigation on the form.
- Submit the Landowner Compensatory Mitigation Request/Waiver form along with your application.

Continue to page 7 for step 12. ⮡

Step 12 of 16

What are the requirements for notification of landowners and oyster lease holders of the proposed project site?

Note: OCM and COE both have mitigation requirements under different laws, rules and regulations; therefore, specific agency requirements may vary.

Note: If a property has multiple owners with undivided interest in the property, each person owning an interest is considered to be a landowner and must be notified.

Note: Additional sheets may be required if there are more than two landowners.

Note: Compensatory mitigation is not a monetary settlement to be used at the discretion of the landowner(s).

Note: A copy of the "Landowner Compensatory Mitigation Request/ Waiver" form is included with this application. To obtain additional copies, visit the OCM website or call:
- *1-800-267-4019*
  Or
- *225-342-7591*

a. Are you applying for a Coastal Use Permit?

☐ **NO** (If NO, proceed to Step 12b.)
☑ **YES** (If YES, read the following information.)

Requirements for Notification of Landowners

It is the responsibility of the applicant to notify the landowner(s) of the property about this proposed project. Notification must include providing each impacted landowner with a copy of the permit application (form and plats) at the time the application is submitted to the Office of Coastal Management.

Requirements for Notification to Oyster Lease Holders

It is the responsibility of the applicant to notify all affected oyster lease holders about this proposed project. Notification must include providing each affected oyster lease holder with a copy of the permit application (form and plats) at the time the application is submitted to the Office of Coastal Management. The location of leases, and the name and contact information of the lessee can be obtained by contacting the LDWF Oyster Lease Survey Section at 504-284-5279. You also can use the OCM GIS interactive map on our website at http://sonris-www.dnr.state.la.us/www_root/sonris_portal_1.htm. Please note that copies of the lease holder notification letters must be included with your application packet at the time of submittal. For more information regarding notification requirements please contact the Oyster Lease Survey Section or visit our website at http://dnr.louisiana.gov/crm/coastmgt/permitsmitigation/oyster.asp.

While these are legal requirements to ensure that property owners/oyster lease holders are aware of proposals which might impact their land/oyster lease, it also serves as a proactive measure to initiate communication between the applicant and the landowner(s)/lease holders, especially when mitigation might be necessary. Since mitigation can be a lengthy process, taking proactive steps early in the process may significantly reduce the time necessary to receive an authorization.

b. Are you the sole owner of the property on which the proposed activity is to occur?

☐ **YES** (If YES, proceed to Step 12c.)
☑ **NO** (If NO, follow the instructions below.)

Check ☑ the appropriate box(es) and complete the landowner information to attest to OCM that a copy of this application has been sent to all landowners whose property will be impacted by the project.

☐ The applicant is an owner of the property on which the proposed described activity is to occur.
☑ The applicant has made every reasonable effort to determine the identity and current address of the owner(s) of the land on which the proposed described activity is to occur, which included, if necessary, a search of the public records of the parish in which the proposed activity is to occur.
☐ The applicant hereby attests that a copy of the application has been distributed to the following landowners.

Landowner/Lease Holder #1: ______________________
Name of Landowner / Lease Holder

Mailing Address: ______________________ ________
Street Address or P.O. Box — Unit/Apartment #

________ ________ ____ ________
City — Parish — State — Zip Code

Landowner/Lease Holder #2: ______________________
Name of Landowner / Lease Holder

Mailing Address: ______________________ ________
Street Address or P.O. Box — Unit/Apartment #

________ ________ ____ ________
City — Parish — State — Zip Code

Note: See our FAQ for a list of regulations that may be applicable. Be aware that this list is for example proposes and does not purport to be complete or indicate applicability in any particular situation or project. It is the applicant's responsibility to be fully aware of all regulatory requirements, to list those requirements and certify that thy will be in compliance.

c. Does the project involve drilling, production, and/or storage of oil and gas?

☑ **NO** (If NO, proceed to Step 13.)
☐ **YES** (If YES, review and complete the certification below. You must attach a list of all state and federal laws and rules and regulations dealing with spill prevention and containment. Your signature on step 14 certifies that you are aware of the terms and conditions of each requirement and that you will remain in compliance at all times.)

I, ______________________ hereby certify that I am the ______________________ of
(Name of officer) *(Name of Office)*

______________________, hereinafter referred to as the Applicant and that I have authority to
(Full legal name of the entity seeking a permit)

act on behalf of and bind that legal entity, and by my signature below I certify that the information in the application is true and correct to the best of my knowledge, that Applicant has provided a complete list of the requirements for protection of health, safety and the environment, and that Applicant is in full compliance with all applicable safety and environmental regulations as listed on the attached sheet, specifically including when applicable, LAC 43:XIX.111 Diverter Systems and Blowout Preventers.

Continue to page 8 for step 13. ↳

Step 13 of 16

Why are Maps and Drawings required to obtain a permit?

Note: The following websites may provide assistance in completing the Vicinity Map:
•Sonris on OCM website
•MapQuest.com
•Topozone.com

Note:
For additional assistance with specific requirements, refer to the samples provided in this application package.

Quality Maps and Drawings are required to process the Joint Permit Application and for Public Notice. They must visually reflect what will be done in the proposed project and are key to the overall evaluation.

The following Maps and Drawings must be submitted with the Joint Permit Application and must show both existing and proposed conditions.

- **Vicinity Map** - Illustrates access to and the location of the proposed project relative to surrounding areas;
- **Plan View Drawing** - Illustrates an overhead view of the proposed project; and
- **Cross Section Drawing** - Illustrates a side view of the proposed project.

In general, all Maps and Drawings should be:

- Legible and clearly labeled on single sided 8½ x 11 size paper; (large drawings that are reduced in size to fit the 8½ x 11 format are not acceptable if the scale is no longer accurate and if the dimensions and details are not clear and easy to read after reproduction in the Public Notice);
- Drawn to scale with the scale identified graphically on each drawing; (if you cannot provide Maps and Drawings to scale, you may submit the dimensions of the proposed and existing features of the work area displayed);
- Black and white **ONLY** (Colored Maps and Drawings will **NOT** be accepted);
- Accurate and reproducible;
- Placement of the north arrow, title, legend and scale bar must be consistent on Maps and Drawings; and
- Information provided in Steps 1 through 12 must be consistent with the Maps and Drawings.

Inadequate or poor Maps and Drawings are the primary reason for delays in the permitting process.
Sample Maps and Drawings are provided with this Joint Permit Application package for your assistance.
Link to sample plats:
http://dnr.louisiana.gov/crm/coastmgt/cup/sampleplats.asp

Step 14 of 16

Who needs to certify and sign this application?

Note:
The application must be signed and dated by the applicant who desires to undertake the proposed activity.

Read the following information. Print your name, sign and date to certify this application for processing.

- Application is hereby made for a permit or permits to authorize the work described in this application.
- To the best of my knowledge the proposed activity described in this permit application complies with and will be conducted in a manner that is consistent with the Louisiana Coastal Resources Program.
- I certify that the information in this application is complete and accurate.
- If applicable, I also certify that the declarations in Step 12, notification to landowner(s), are complete and accurate.
- If applicable, I also certify that the declarations in Step 12c, oil spill response, are complete and accurate.
- I will abide by the conditions of the permit or license if issued and will not begin work without the appropriate authorization.
- Permission is granted to the agencies responsible for authorization of this work, or their duly authorized representative, to enter the property site during working hours for inspection purposes.
- If applicable, I authorize the agent identified in Step 2 to act in my behalf as agent for this application and the agent will furnish, upon request, information in support of this application.

Justin Minter
Clearly Print Name of Applicant

Justin Minter Digitally signed by Justin Minter Date: 2020.09.17 15:32:55 -05'00'
Applicant Signature

9 / 17 / 20
Date

Note: If an agent is being used, the applicant and agent must sign and date this application.

- As the agent, I further certify that I possess the authority to undertake the work described herein or am acting as the duly authorized agent of the applicant.

Michael Aubele
Clearly Print Name of Authorized Agent

Michael Aubele Digitally signed by Michael Aubele DN: C=US, E=Mike.Aubele@exp.com, CN=Michael Aubele Date: 2020.09.17 16:10:56-04'00'

Date

18 U.S.C. Section 1001 provides that: Whoever, in any manner within the jurisdiction of any department or agency of the United States knowingly and willfully falsifies, conceals, or covers up by any trick, scheme, or disguises a material fact or makes any false, fictitious or fraudulent statements or representations, or makes or uses any false writing or document knowing same to contain any false, fictitious or fraudulent statements or entry, shall be fined not more than $10,000 or imprisoned not more than 5 years or both.

Continue to page 9 for step 15.

Step 13 of 16

Why are Maps and Drawings required to obtain a permit?

Note: *The following websites may provide assistance in completing the Vicinity Map:*
•Sonris on OCM website
•MapQuest.com
•Topozone.com

Note:
For additional assistance with specific requirements, refer to the samples provided in this application package.

⚠ **Quality Maps and Drawings are required to process the Joint Permit Application and for Public Notice. They must visually reflect what will be done in the proposed project and are key to the overall evaluation.**

The following Maps and Drawings must be submitted with the Joint Permit Application and must show both existing and proposed conditions.

- **Vicinity Map** - Illustrates access to and the location of the proposed project relative to surrounding areas;
- **Plan View Drawing** - Illustrates an overhead view of the proposed project; and
- **Cross Section Drawing** - Illustrates a side view of the proposed project.

In general, all Maps and Drawings should be:

- Legible and clearly labeled on single sided 8½ x 11 size paper; (large drawings that are reduced in size to fit the 8½ x 11 format are not acceptable if the scale is no longer accurate and if the dimensions and details are not clear and easy to read after reproduction in the Public Notice);
- Drawn to scale with the scale identified graphically on each drawing; (if you cannot provide Maps and Drawings to scale, you may submit the dimensions of the proposed and existing features of the work area displayed);
- Black and white **ONLY** (Colored Maps and Drawings will **NOT** be accepted);
- Accurate and reproducible;
- Placement of the north arrow, title, legend and scale bar must be consistent on Maps and Drawings; and
- Information provided in Steps 1 through 12 must be consistent with the Maps and Drawings.

Inadequate or poor Maps and Drawings are the primary reason for delays in the permitting process.
Sample Maps and Drawings are provided with this Joint Permit Application package for your assistance.

Step 14 of 16

Who needs to certify and sign this application?

Note:
The application must be signed and dated by the applicant who desires to undertake the proposed activity.

Read the following information. Print your name, sign and date to certify this application for processing.

- Application is hereby made for a permit or permits to authorize the work described in this application.
- To the best of my knowledge the proposed activity described in this permit application complies with and will be conducted in a manner that is consistent with the Louisiana Coastal Resources Program.
- I certify that the information in this application is complete and accurate.
- If applicable, I also certify that the declarations in Step 12, notification to landowner(s), are complete and accurate.
- If applicable, I also certify that the declarations in Step 12c, oil spill response, are complete and accurate.
- I will abide by the conditions of the permit or license if issued and will not begin work without the appropriate authorization.
- Permission is granted to the agencies responsible for authorization of this work, or their duly authorized representative, to enter the property site during working hours for inspection purposes.
- If applicable, I authorize the agent identified in Step 2 to act in my behalf as agent for this application and the agent will furnish, upon request, information in support of this application.

Justin Minter	Justin Minter Digitally signed by Justin Minter Date: 2020.09.17 15:32:55 -05'00'	9 / 17 / 20
Clearly Print Name of Applicant	Applicant Signature	Date

Note: *If an agent is being used, the applicant and agent must sign and date this application.*

- As the agent, I further certify that I possess the authority to undertake the work described herein or am acting as the duly authorized agent of the applicant.

Michael Aubele	Michael Aubele Digitally signed by Michael Aubele DN: C=US, E=Mike.Aubele@exp.com, CN=Michael Aubele Date: 2020.09.17 16:10:56-04'00'	9 / 17 / 20
Clearly Print Name of Authorized Agent	Authorized Agent Signature	Date

18 U.S.C. Section 1001 provides that: Whoever, in any manner within the jurisdiction of any department or agency of the United States knowingly and willfully falsifies, conceals, or covers up by any trick, scheme, or disguises a material fact or makes any false, fictitious or fraudulent statements or representations, or makes or uses any false writing or document knowing same to contain any false, fictitious or fraudulent statements or entry, shall be fined not more than $10,000 or imprisoned not more than 5 years or both.

Continue to page 9 for step 15. ➥

Step 15 of 16

What fees are required for permit processing and what methods are available for payment?

COE and Local Parish Program fees will be assessed separately at the end of the process.

The following fees apply and must be received in order to process the application.

a. Check ☑ the appropriate box to indicate the fee type: *(See the "Glossary" on page 10 for the definitions of terms.)*

☐ **$100.00 - Non-Residential**
☐ **$ 20.00 - Residential**

- If your activity involves dredging or filling, OCM will bill you on the basis of $.04 per cubic yards for residential uses and $.05 per cubic yards for all other uses.
- Fees may not apply if the Joint Permit Application is being processed by the local Parish.
- Additional fees may be assessed for mitigation processing.

b. Check ☑ the appropriate box to indicate payment method:

☑ **Check/Money Order** ☐ **Electronic Transfer**
☐ **Credit Card (Visa or MasterCard only)** ☐ **Escrow Account**

- Make Check/Money Order payable to the Office of Coastal Management.
- To pay by Credit Card, Electronic Transfer or Escrow Account, call OCM at 1-800-267-4019 to provide specific account information or provide account information on a separate sheet of paper and include with application.
- Cash is not accepted.

Step 16 of 16

How do I submit the Joint Permit Application and Maps and Drawings for processing?

If your project is in the Galveston or Vicksburg District of the Corps of Engineers, please see page 12.

Note: *Please keep a copy of the completed application for your records.*

To submit this permit application, Maps and Drawings and all supporting documentation, select an option below.

MAIL:

Office of Coastal Management
P.O. Box 44487
Baton Rouge, LA 70804-4487

If you select the MAIL option, submit the original Joint Permit Application, Maps and Drawings and supporting documentation.

EXPRESS MAIL:

Office of Coastal Management
617 North 3rd Street,
Suite 1078
Baton Rouge, LA 70802
Phone: 225-342-7591

If you select the EXPRESS MAIL option, submit the original copies of the Joint Permit Application, Maps and Drawings and supporting documentation.

FAX:

225-342-6760
Attention: Office of Coastal Management, Joint Permit Application Processing

- Include a cover sheet with the total number of pages; and
- If you select the FAX option, follow-up with one of the mail options to prevent delay if the fax is not legible.
- Payment arrangements should be made prior to faxing your application by calling OCM at 1-800-267-4019.

Continue to page 10 for "Glossary of Terms".

Glossary of Terms

The following information may provide a better understanding of terms that are used throughout this application.
If the terms defined in this section do not help you, please contact OCM at one of the following, 1-800-267-4019 or 225-342-7591.

Adjacent Landowner
Property owners or lessees whose property is contiguous or shares a common border with that being developed.

Affected Landowner
The owner of the land on which a proposed activity will occur. If a property has multiple owners with undivided interest, each person owning an interest is considered to be an affected landowner.

Coastal Use Permit
A permit required by 214.30 of the SLCRMA. The term does not mean or refer to, and is in addition to, any other permit or approval required or established pursuant to any other constitutional provision or statute.

Compensatory Mitigation
As defined by OCM, replacement, substitution, enhancement, or protection of ecological values to offset anticipated losses of ecological values caused by a permitted activity.
As defined by the COE, compensating for unavoidable adverse impacts to wetlands by restoring areas to wetlands, creating wetlands, or enhancement of wetlands. Most compensatory mitigation involves purchase of mitigation credits in a private mitigation bank. The amount of credits purchased is dependent on the amount of wetland values that would be lost because of the permitted project.

Cross Section
A side view of a project area illustrating elevations of features such as natural ground; buildings; bulkheads; piers; and depressions such as waterways, ditches, ponds, etc. Cross sections also show side views of proposed work such as dredging and filling.

Discharge
The placement or movement of fill or excavated material using methods including, but not limited to dragline or backhoe buckets, bulldozers, front loaders, dump trucks, hydraulic dredge pipes, wheel-washing or prop-washing, jetting, etc.

Dredged Material (Spoil)
Material that is excavated as part of a specific project.

Ecological Value
The ability of an area to support vegetation, fish and wildlife populations.

Excavate
To dig out, remove or move earthen material, or to form a cavity or hole including linear features. Methods include, but are not limited to, draglines, backhoes, bulldozers, front loaders, hydraulic dredges, wheel-washing or prop-washing, jetting, etc.

Fastlands
Lands surrounded by publicly-owned, maintained, or otherwise validly existing levees or natural formations as of January 1, 1979, or as may be lawfully constructed in the future, which levees or natural formations would normally prevent activities, not to include the pumping of water for drainage purposes, within the surrounded area from having direct and significant impacts on coastal waters.

Fill Material
Any material including, but not limited to, soil, rocks, sand, clay, construction debris, trees, wood chips, broken concrete and asphalt, etc., whose placement replaces any portion of a waterbottom or wetland with dry land or changes the elevation of wetlands or waterbottoms. This material may come from on-site or be imported from an off-site source.

Mean High Water
The average position (elevation) of the high water mark.

Mean Low Water
The average position (elevation) of the low water mark.

Mitigation
All actions taken by a permittee to avoid, minimize, restore, and compensate for ecological values lost due to a permitted activity.

Non-Residential
Includes all actions that do not meet the requirements for the Residential category.

Non-Vegetated Waterbottoms
Waterbottoms that lack the presence of rooted vegetation.

Non-Wet Areas
Any area that has sufficiently dry conditions that indicate hydrophytic vegetation, hydric soils, and/or wetland hydrology are lacking.

Off-site
Not within or adjoining the area directly modified by the permitted activity and not directly related to implementation of the permitted activity.

On-site
Within or adjoining the area directly modified by the permitted activity or directly related to implementation of the permitted activity.

Residential
Any coastal use associated with the construction or modification of one single-family, duplex, or triplex residence or camp. It shall also include the construction or modification to any outbuilding, bulkhead, pier, or appurtenance on a lot on which there exists a single-family, duplex, or triplex residence or camp or on a water body which is immediately adjacent to such lot. Uses which do not fit this definition are non-residential. The Coastal Use Permit application fee for residential projects is $20.

Unavoidable Net Loss of Ecological Values
The net loss of ecological value that is anticipated to occur as the result of a permitted/authorized activity, despite all efforts, required by the guidelines, to avoid, minimize, and restore the permitted/authorized impacts.

Vegetated Waterbottoms
Waterbottoms that exhibit the presence of rooted vegetation.

Wetlands
For the purposes of §724 (as defined in R.S. 49:21.41), Open water areas or areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and under normal circumstances, do support a prevalence of vegetation typically adapted for life in saturated soil conditions.

Continue to page 10 for “Frequently Asked Questions”.

Frequently Asked Questions

The following questions and answers may assist you during the application process. For an expanded version of frequently asked questions, visit our website at http://dnr.louisiana.gov/CRM/faq.asp

---

What gives the Office of Coastal Management (OCM) the right to regulate private property?

OCM does not regulate private property. OCM regulates activities that have a direct and significant impact on state public resources. OCM's authority derives from Louisiana Revised Statute 49:214.21 et seq. Visit the legislative website for additional information at http://www.legis.state.la.us/lss/tsrssearch.htm.

How does the Joint Permit Application process work?

In general, an application is submitted which details the location and scope of the proposed work. OCM – Permits & Mitigation Division, which serves as a central collection point for the applications, distributes the applications to interested parties for their review and comment. OCM - Permits & Mitigation Division and the commenting agencies review the application for conformance with programmatic requirements and look for ways of minimizing impacts to coastal resources (e.g., vegetated wetlands, bird rookeries, endangered species, etc.). If necessary, negotiations are entered into to find locations, technologies or methods of implementing the project which will accommodate the needs of the permit applicant while conforming with the mandates of the various state and federal agencies. Once consensus is reached an appropriately conditioned permit is issued.

Who receives a copy of my Joint Permit Application?

The following agencies/offices receive a copy of your application:

- OCM Permit Section;
- Local Programs Section, (if necessary);
- OCM Support Services Staff;
- OCM Field Investigator;
- The Army Corps of Engineers; and
- State Land Office.

How long does it take to obtain a permit?

The following schedules are offered with the assumption that all of the information required by OCM is included in the application and the plats are adequate, clear and legible. For activities that are exempt from permit requirements, the determination is normally issued in under seven days. Projects that are determined to have no direct or significant impacts to coastal resources are issued in 4 to 10 days depending on location. Authorizations for activities that qualify for a General Permit are issued in 10 to 15 days. For those activities that require full public notice, a minimum of 45 days is required. During review of the permit application, for more complex activities, additional information may be requested. The more promptly the applicant can furnish this information the less time it will require to issue the authorization. The requirement for mitigation of wetland impacts is one of the factors that increases the time required for permit application review, as does coordination with other State agencies for activities affecting resources of concern to that agency

How do I check the status of a submitted Joint Permit Application?

Information regarding submitted permits may usually be obtained on the OCM website: http://sonris.com/direct.asp?server=sonris-www&path=/sonris/cmdPermit.jsp%3Fsid%3DPROD.

How does OCM protect the information that I provide throughout this application?

Information provided on the application is used to evaluate the activity that is proposed for permitting, and this information is generally available for inspection and copying by the public, pursuant to the Louisiana Public Records act. There are some limited exceptions to the public records laws to protect certain types of records or information from public inspection. Please contact our office, **before** you submit any records or information that you would prefer not be available for public inspection or copying. In any case, simply marking a document "CBI" or "confidential business information" will not guarantee that the records or information will be protected from public inspection and copying.

May I submit a Joint Permit Application to the Parish instead of OCM?

Yes, if your project is located in a parish with an approved Local Coastal Program (Calcasieu, Cameron, Jefferson, Lafourche, Orleans, Plaquemines, St. Bernard, St. James, St. Tammany or Terrebonne) then you may submit your application to either the approved local program or the state office. If you submit the application to the state office, it will be input into the system and reviewed at that time. If you submit your application to the local parish office, then that office will forward the application to the state office to be input into the system and reviewed. Please allow additional time to receive a response if you choose the latter option.

What other permits may be required?

If your project involves dredging or filling of wetlands you may need a Water Quality Certification from the Department of Environmental Quality.
Other approvals may be required but are not limited to the following:

- State Land Office;
- Department of Wildlife and Fisheries;
- Department of Culture, Recreation and Tourism;
- Department of Transportation and Development; and/or
- Department of Health and Hospitals.

These agencies will notify you of their requirements as part of the Joint Public Notice process.

When I receive my permit from OCM, may I begin work?

Following the determination from OCM, work may begin only after obtaining any necessary permit(s) from the COE, including any required mitigation, and any approvals or permits required any local authority or agency or by any state or federal agency, as may be required by law for said activity or the construction of the referenced project.

How may I receive an extension for a permit?

If you have not begun work on your project within two years of the date of permit issuance, the initiation period can be extended for an additional two years if you submit a request to OCM no less than sixty days and no more than one-hundred and eighty days before the initial two year period expires. The expiration date can be extended. Follow the same rules. There is an $80.00 extension fee.

If I began my project without a permit, what will happen?

OCM processing of any pending Joint Permit Application for the project will be suspended until the violation is resolved. You may be required to remove any structures installed and restore any impacted habitat. You may be subject to fines of up to $12,000and may be jailed up to six months. The penalties assessed by the Army Corps of Engineers may be significantly more expensive and more complicated.

Did I break the law if I have already done some clearing?

A representative from LDNR will perform a field investigation and project evaluation in order to determine the extent of any impacts and if you have violated any laws.
Contact OCM at 1-800-267-4019 for assistance.

What is Section 10 of the Rivers and Harbors Act?

Section 10 of the Rivers and Harbors Act of 1899 prohibits the obstruction or alteration of navigable water of the United States without a permit from the U.S. Army Corps of Engineers.

What is Section 404 of the Clean Water Act?

Section 404 of the Clean Water Act prohibits the discharge of dredged or fill material into waters of the United States without a permit from the U.S. Army Corps of Engineers.

How do I receive additional information on the Joint Permit Application process?

For additional information regarding the Joint Application Process, contact OCM at 1-800-267-4019 or visit the website at: http://dnr.louisiana.gov/crm/. You may also contact the Army Corps of Engineers at 504-862-2766 or visit the website at: www.mvn.usace.army.mil/ops/regulatory.

1.0 INTRODUCTION

Blue Marlin Offshore Port LLC (the Applicant) is proposing to develop the Blue Marlin Offshore Port (BMOP) Project (Project) in the Gulf of Mexico (GOM) to provide crude oil transportation and loading services for crude oil produced in the continental United States (U.S.). The Project will consist of both onshore supply components and water dependent offshore/marine components, as depicted in **Figure 1-1**. Oil for export will be transported via pipeline from the existing Sunoco Partners Marketing and Terminals, L.P., a terminal and storage facility in Jefferson County, Texas referred to as the Nederland Terminal (NT). This terminal is connected to production from across the U.S. The Deepwater Port (DWP) will be approximately 99 statute miles off the coast of Cameron Parish, Louisiana, within approximate water depth of 162 feet. Crude oil will be routed from storage via pumps at Nederland, through a new 37.02 mile, 42-inch outer diameter (OD) onshore pipeline to the existing Stingray Mainline at Station 501 (see Section 1.2.1) in Cameron Parish, Louisiana, and from there through the existing Stingray Mainline to the DWP. A Project overview map of the onshore Project components is provided in **Figure 1-2**.

Issuing permits for construction of the proposed Project would qualify as a major federal action and, therefore, require a National Environmental Policy Act (NEPA) analysis. The Applicant is filing an application for a license to construct, own, and operate the Project pursuant to the Deepwater Port Act (DWPA) of 1974, as amended, and in accordance with implementing regulations. The initiation of the NEPA under the DWPA will be carried out by the U.S. Coast Guard (USCG) and U.S. Maritime Administration (MARAD) as these agencies have federal jurisdiction over the entire Project. The USCG and MARAD have made the determination that an Environmental Impact Statement (EIS) will be prepared for the proposed Project. Once MARAD deems the Application complete, they will start the NEPA process. Their regulations require that their decision-making process, including the EIS, is completed in 356-days. As part of the NEPA process, the U.S. Army Corps of Engineers (USACE), Louisiana Department of Natural Resources (LDNR), Railroad Commission of Texas (RRC), and other federal and state agencies will be given the opportunity to participate as cooperating agencies for the preparation and development of the EIS.

The Project crosses both the USACE Galveston District and the New Orleans District as shown in **Figure 1-2**. The onshore pipeline and associated facilities from milepost (MP) 0.0 to 34.03 are located within the Galveston District and remaining portion of the onshore pipeline and associated facilities (MP 34.03 to 37.02) and the existing pipeline system to the DWP is located within the New Orleans District.

Based on discussions with Galveston and New Orleans USACE Districts, LDNR, and RRC, it was recommended that the Applicant file LDNR's Joint Permit Application for Work within Louisiana Coastal Zone for the Project's impacts to waters of the U.S. With this Joint Permit Application, the Applicant is seeking approval under Section 404 of the Clean Water Act (CWA), Section 10 of the Rivers and Harbors Appropriation Act (RHA), and Louisiana Coastal Use Permit. This permit application will cover the requirements of LDNR's Joint Permit Application and USACE Form 4345. This application will also be distributed by LDNR to the Louisiana Department of Environmental Quality to initiate review pursuant to Section 401 of the CWA for Louisiana. The Applicant will provide a copy of this application to the RRC to initiate review pursuant to Section 401 of the CWA and for compliance with the Coastal Management Program for Texas.

The construction of the Project will result in both temporary and permanent impacts to waters of the U.S. Impacts to waters of the U.S. that fall under the jurisdiction of Section 404 of the CWA only apply to impacts associated with the installation of the onshore pipeline and its associated facilities as described in Section 1.3. Impacts to waters of the U.S. due to the construction of the Project fall under the jurisdiction of both the Galveston and New Orleans USACE Districts as discussed in Sections 3.0 and 4.0 of this application.

Section 10 of the RHA applies to portions of the onshore pipeline and all of the proposed new offshore facilities for the Project as described in Section 1.2. These structures and impacts, subject to Section 10 of the RHA, are located within both the Galveston and New Orleans District jurisdictions, but all structures associated with the DWP in federal waters are within the jurisdiction of the New Orleans District. Impacts to Section 10 waters are described in Section 4.2 of this application.

To identify the waters of the U.S. within the onshore pipeline footprint, the Applicant conducted field surveys of wetlands and waterbodies within the entire onshore pipeline project area, including those areas on the existing Stingray Mainline between existing Stations 501 and 701, during March, May, and June of 2020. Field delineations followed guidelines from the 1987 U.S. Army Corps of Engineers Wetlands Delineation Manual and the Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Atlantic and Gulf Coastal Plains Region (Version 2.0). During the surveys, an approximate 300-foot survey corridor centered along the proposed pipeline centerline (150 feet from each side of the centerline) was evaluated in March, May, and June of 2020. In addition, the entire footprint of the proposed workspace for the existing and proposed stations, and access roads which require improvement was surveyed. The wetland and waterbody field survey report is provided in **Appendix A.** To note, the development of the BMOP Pump Station will be within the operational limits of the existing NT site. Impacts to waters of the U.S. associated with the development of the NT site is being permitted as part of the "Nederland Terminal Buildout Project" which is anticipated to commence construction in January 2021 and is being permitted under a separate USACE permit currently under review by the Galveston District and therefore not addressed in this application. Impacts to convert the existing Stingray Mainline to oil service will entail impacts to existing stations in Cameron Parish, LA (Station 501 and 701) and conversion of existing platforms in federal waters in West Cameron Lease Block (WC) 148 and WC 509.

FIGURE 1-1 Project Overview Map

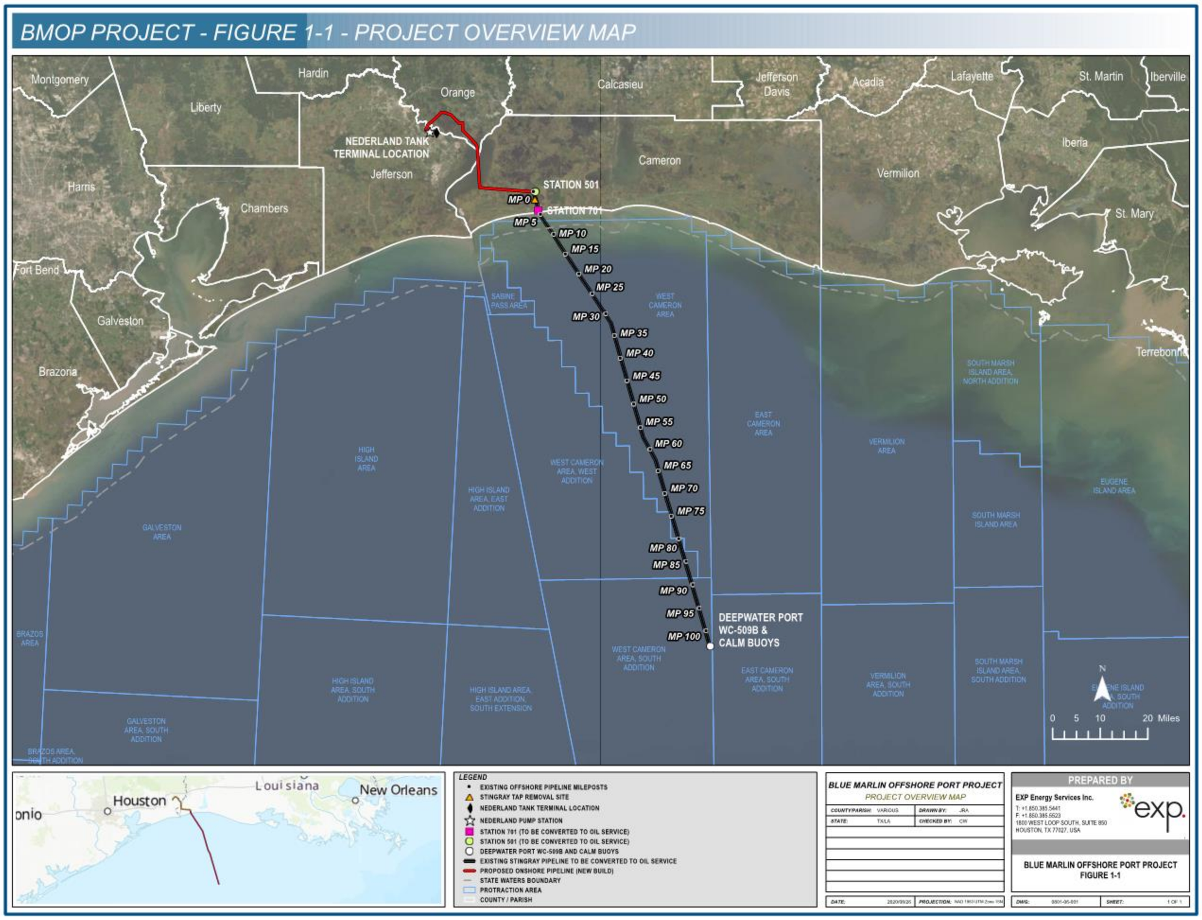

FIGURE 1-2 Onshore Project Component Overview Map

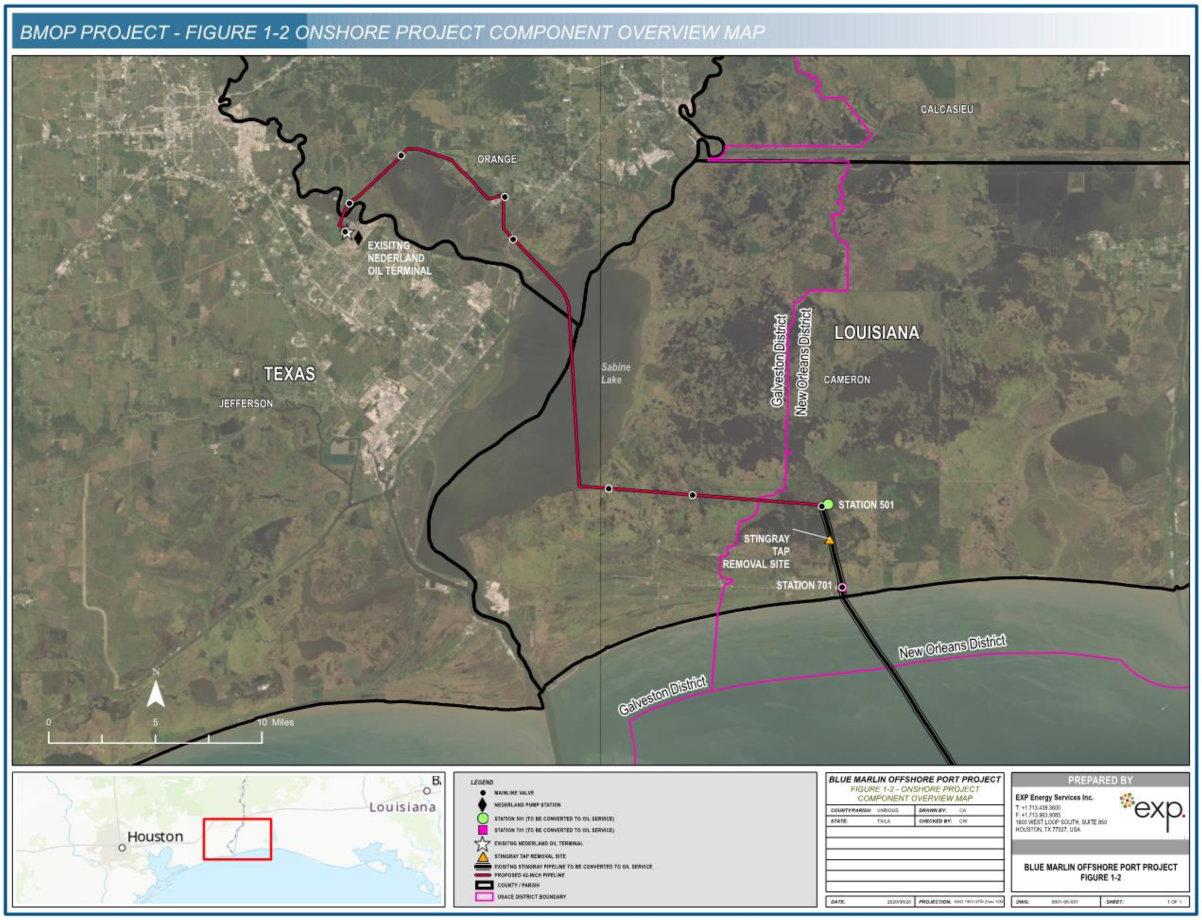


1.1 PURPOSE AND NEED

The Applicant proposes to construct, own, operate, and eventually decommission a DWP in the northern GOM off of the Louisiana coast to be able to fully load very large crude carriers (VLCCs) without the need for ship-to-ship transfers, expansion of already congested GOM ports, and to enable export of domestically produced light to heavy grade crude oil to foreign global markets.

The Applicant has examined the current market and projected condition in the northern GOM and has determined that there are insufficient outlets for U.S. oil production. Based on the businesses that the Applicant's parent and affiliate entities are engaged in (oil and gas transportation, storage, and port facilities) and the increasing volume of oil being produced in the U.S., there are limited shipping options available in the GOM. Most ports are constrained in one or more ways. Access to onshore ports in the northern GOM is constrained due to navigation channel access not being deep enough to handle VLCC-sized oil carriers; insufficient dock space for either additional smaller carriers or larger oil carriers; and existing storage capacity to allow product to wait for refinery space, or ability to be exported.

Fully loaded VLCCs have drafts of approximately 71 feet, which would preclude the use of coastal loading facilities. Although the inland waterways (navigation channels and rivers) are regularly dredged to maintain depth (approximately 45 feet) and enable safe navigation for most ships, they are not deep enough for deep-draft vessels such as fully loaded VLCCs. To circumvent depth restrictions, VLCCs transporting crude oil to or from the GOM coast have typically used partial loadings and ship-to-ship transfers. The ship-to-ship transfer process, known as lightering, requires the use of multiple smaller vessels to ferry oil from ports to offshore VLCCs to fully load/unload a larger vessel (EIA, 2018; MARAD and USCG, 2020).

The Applicant, and affiliate companies, examined existing infrastructure as well as building a new purpose-built system to facilitate export of oil from the U.S. Because of the myriad of abandoned, or under-utilized pipeline systems in the northern GOM, the Applicant has focused on developing a solution that would avoid the impacts of building a completely new export facility in the GOM. The Project is designed to provide a DWP, at a distance from shore and current shipping congestion, to facilitate U.S. producer access to international shipping interests with the capability for full loading of VLCCs. By providing for full loading of VLCCs, the proposed DWP will reduce the need for lightering offshore. In addition, it will reduce the number of required oil carriers as each VLCC is designed to carry approximately two million barrels of crude oil. By comparison, four Aframax vessels or two Suezmax vessels (both of which are used in port or for lightering) would be needed to carry the same amount of crude oil as a single VLCC (EIA, 2018; MARAD and USCG, 2020). With the conversion of an underutilized natural gas pipeline and offshore platform to oil service, the Applicant can meet the objectives of the need for oil export capacity while minimizing impacts to the environment.

U.S. refineries can process a wide range of crude oil qualities; however, there are optimum qualities for each refinery based on its current design. In addition, refinery acquisition costs of a particular crude oil quality can differ for domestic versus imported oil. With U.S crude oil production growing significantly, U.S. refineries cannot accommodate the additional large volumes that are being produced. Therefore, crude oil exports have continued to increase since the restrictions on exporting domestically produced crude were lifted in December 2015, increasing from 591,000 barrels per day (bpd) in 2016 to 3.0 million bpd in 2019 (EIA, 2020a).

According to the U.S. Energy Information Administration (EIA), in May 2020, the U.S. exported and imported nearly equal amounts of energy. However, the U.S. had been a net exporter of energy in several months previously in 2020. The reduction in export is due to changes in domestic production and declines in global demand for energy since mid-March of 2020 in response to the 2019 Novel Coronavirus (COVID-

19) which shifted energy trade balances back in the direction of net imports, especially for U.S. crude oil and petroleum products (EIA, 2020b). Prior to the COVID-19 response, the EIA's 2020 Annual Energy Outlook reference case projected production of U.S. crude oil to grow with production reaching 14.0 million bpd by 2022, remaining near that level until 2045. With such strong production growth, and decreasing domestic demand, the U.S. was projected to continue to export high volumes of crude oil, resulting in increased export from 2020 to 2033 (EIA, 2020c). COVID-19 and its mitigation efforts are significantly affecting energy demand in the short term and EIA projects that it could continue to do so in the medium and even long term which will be addressed in the upcoming 2021 Annual Energy Outlook (EIA, 2020d).

In accordance with the U.S.'s energy outlook, U.S. production increases, combined with refinery capacities for specific oil types, crude oil production will need to be shipped or shut in. In addition to reducing the need for lightering, the proposed DWP Project will provide a safe, efficient, and reliable facility for the export of crude oil excess to satisfy global market demands at competitive prices.

1.2 PROJECT OVERVIEW

The DWP will be located in federal waters within and adjacent to the WC 509, WC 508, and East Cameron Lease Block (EC) 263 (see **Figure 1-3**).

The following is a description of the primary components of both the offshore and onshore portions of the Project. The Project will include both the construction of new facilities and the repurposing and abandonment of existing facilities.

1.2.1 New Offshore Facilities

The following are the new facilities that will be constructed to support the offshore portion of the Project.

- Two new Catenary Anchor Leg Mooring (CALM) Buoys installed, one in WC 508 (CALM Buoy No. 1) and the other in EC 263 (CALM Buoy No. 2). The CALM Buoys will be anchored to the seafloor via an engineered mooring system capable of accommodating mooring forces exerted by a VLCC or other large seafaring vessels during loading operations. Two 24-inch diameter floating hoses will be connected to each CALM Buoy. They will be approximately 1,500 feet long and used for loading operations.
- Two new pipeline end manifolds (PLEMs) installed and anchored on the seafloor under the CALM Buoys. Two 24-inch undersea flexible hoses will be connected to each PLEM and associated CALM Buoy.
- Two Crude Oil Loading Pipelines, approximately 4,710 feet long to PLEM / CALM Buoy No. 1 and 6,085 feet long to PLEM / CALM Buoy No. 2, installed from the WC 509 Platform Complex to the PLEM and CALM locations, one for each PLEM and CALM Buoy. The pipelines will be installed with the top of pipe at least three feet below the natural seafloor.
- New mainline valve (MLV) at WC 148 Platform;
- Two new 36-inch risers connected to the Crude Oil Loading Pipelines on WC 509B Platform;
- New control room on WC 509B Platform;
- Three new pig barrels, one on WC 509A Platform and two on WC 509B Platform;
- Meter station for crude oil on WC 509B Platform;
- New living quarters and heliport on WC 509C Platform;

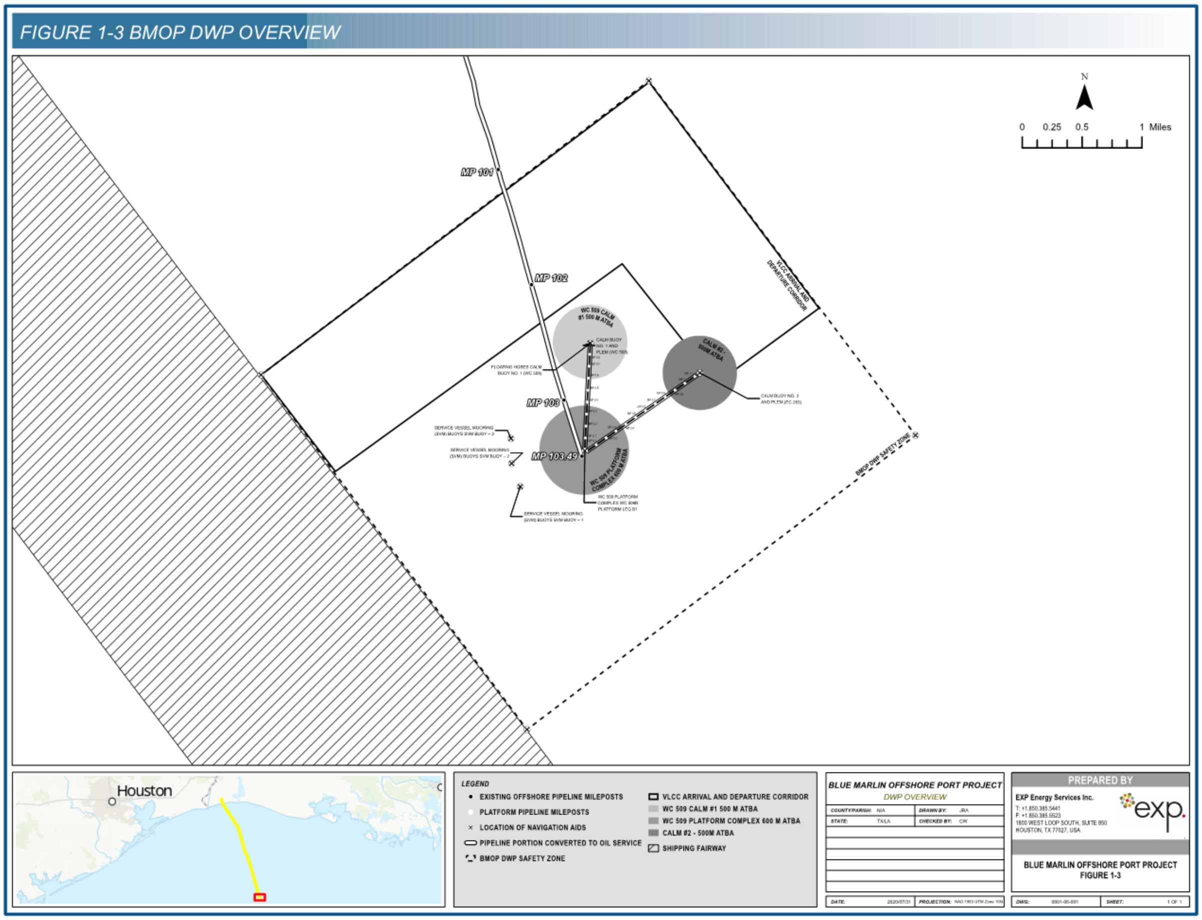
- Surge valves and tank on WC 509B Platform; and
- New ancillary equipment for the WC 509 Platform Complex (e.g., power generators, instrument/utility air system, fuel tanks, ac units, freshwater makers, firewater system, seawater and freshwater system, sewage treatment unit, fuel gas system, diesel system, closed drain system, open drain system, hydraulic power unit, hypochlorite system, cranes, communications tower and system, radar) to support operation of the offshore facilities.

1.2.2 New Onshore Facilities

The following are the new facilities that will be constructed to support the onshore portion of the Project.

- A new, approximate 37.02-mile, 42-inch OD pipeline connecting the existing NT to the existing 36-inch OD Stingray Mainline at Station 501 in Cameron Parish, Louisiana.
- A new pump station (BMOP Pump Station) will be located in Jefferson County, Texas, adjacent to the existing NT in Jefferson County, Texas at MP 0.0. The land where the BMOP Pump Station site is located is to be filled as part of the “Nederland Terminal Buildout Project,” which is anticipated to commence construction in January 2021, prior to construction of the BMOP Project.
- Six new MLVs will be installed within the permanent pipeline right-of-way (ROW) of the new build pipeline. MLVs will also be installed at the BMOP Pump Station, Station 501, and Station 701. These valves will be used for isolation and spill control purposes.

FIGURE 1-3 DWP Overview Map



1.2.3 Conversion of Existing Onshore and Offshore Facilities

The following are the existing facilities that will be repurposed to support the offshore and onshore portions of the Project.

- The existing Station 501 is located at approximate MP 37 of the new 42-inch OD pipeline in Cameron Parish, Louisiana. All existing natural gas-related equipment owned by BMOP will be removed from the Station and new pipeline facilities will be installed. The new 42-inch OD pipeline will tie into the existing 36-inch OD Stingray Mainline at the site. The converted Station 501 will be expanded to include new pig receiver for the new 42-inch OD pipeline termination, new pig launcher for existing 36-inch OD Stingray Mainline, and a new MLV. [*onshore facility*]
- The existing compressor Station 701 in Cameron Parish, Louisiana, will be demolished. All existing natural gas equipment will be removed from the Station except for two large 10,000-barrel storage tanks. The new facility will maintain office space, a natural gas interconnect, and surge tanks. Approximately 1,000 feet of new pipe, surge tanks, surge valves, and a new MLV will be installed. The existing 10,000-barrel tanks located at Station 701 will be converted to surge relief tanks. [*onshore facility*]
- The existing Stingray Mainline from Station 501 to the WC 509 Platform Complex will be converted to crude oil service. [*onshore and offshore facilities*]
- The existing ANR Tap (Stingray Tap Removal Site) is located at approximately MP 1.61 on the Stingray Mainline in Cameron Parish, Louisiana (approximate MP 38.6 on the BMOP pipeline system). BMOP will install a 36-inch OD pipe segment following removal of the tap. [*onshore facility*]
- The WC 148 Platform will be converted to crude oil service and a new MLV installed. [*offshore facility*]
- The existing WC 509 Platform Complex will be converted from a gas transmission facility to a dual-purpose gas transmission and crude oil export facility. The existing equipment that will remain at the Converted Complex will include the following. [*offshore facility*]
  - Existing natural gas piping and risers on WC 509A Platform;
  - Natural gas Vent Boom on WC 509 Vent Bridge Tripods;
  - Natural gas separation facilities on WC 509B Platform; and
  - Heliport and helicopter fuel tank on WC 509A Platform.

1.2.4 Offshore Support Facilities

Support facilities for the offshore portion of the Project will include:

- Anchorage area – Established USCG-designated anchorage areas will be utilized for VLCCs (or other crude carriers) awaiting mooring at a CALM Buoy or if they must disconnect from the CALM Buoys for safety reasons.
- Support vessel mooring area – A designated Service Vessel Mooring Area will be established in proximity to the offshore WC 509 facilities.
- Temporary pre-fabrication yards – Component fabrication will occur at multiple existing fabrication facilities within the GOM coastal region.

- Support facilities – Facilities within the GOM coastal region providing support for offshore operations and maintenance activities (e.g., helicopters, supply vessels, work boats, equipment suppliers, and maintenance workers).

1.2.5 Onshore Support Facilities

Support facilities for the onshore portion of the Project will include temporary use of existing pipe and contractor yards as well as use of existing access roads and canals.

1.2.6 Abandonment and Conversion of Existing Facilities

The Stingray Pipeline system is currently comprised of multiple lateral pipelines from various suppliers and producers that feed natural gas into the Stingray Mainline. Stingray transports natural gas and liquids on this 36-inch OD pipeline from the offshore WC 509 Platform Complex to the onshore compressor station facility (Station 701) near Holly Beach in Cameron, Louisiana, and northward approximately four additional miles to the Natural Gas Pipeline Co./Stingray interconnect (Station 501). The Stingray facilities from the WC 509 Platform Complex to Station 501 will be abandoned through a Federal Energy Regulatory Commission (FERC) 7(b) Order and converted to use as DWP facilities. The Applicant intends to use all existing records and inspection data and perform additional engineering studies to obtain the appropriate agency approvals for converting all existing, reusable facilities. This includes updating the facilities to meet current regulations and guidelines where appropriate. Abandonment under FERC 7(b) will be considered complete when the Stingray Mainline is completely isolated from all-natural gas sources and all-natural gas and produced liquids have been removed from the pipeline. The Applicant intends to operate the new facilities under 49 Code of Federal Regulations (CFR) Part 195.

Conversion of the Stingray facilities involves converting service to crude oil and changing flow direction in the Mainline; converting the platform at WC 148, herein referred to as the WC 148 Platform, to crude oil service from natural gas service; and converting the platform complex at WC 509, herein referred to as the WC 509 Platform Complex, to crude oil and natural gas service.

1.3 OFFSHORE FACILITIES

The existing WC 509 Platform Complex will be converted to a dual-purpose gas transmission and oil export facility. The WC 509A Platform will continue its purpose as a gas transmission platform after being reconfigured to redirect the gas to the Sea Robin Pipeline. The majority of the natural gas pipeline facilities on the WC 509B Platform (compressor station and auxiliary equipment) will be removed and new oil export facilities installed. The new facilities will consist of 36-inch piping, oil metering facility, new control room, new workshop, new electrical building, lab for custody transfer analysis, pig traps, cranes, surge tank, and other auxiliary equipment that support the operation. Natural gas pipeline facilities on the WC 509A Platform will be reconfigured and redirected to another pipeline system and will remain under the jurisdiction of the FERC.

The Stingray Mainline that is being converted from natural gas to crude oil comes up from the seafloor onto the WC 509A Platform and will be routed above the waterline to the WC 509B Platform. Piping and liquid separation facilities, related to planned and unplanned natural gas venting, will remain on the WC 509A and WC 509B Platforms with the natural gas releases occurring at the end of the Vent Bridge Tripod located approximately 660 feet south and east of the WC 509B Platform. On the WC 509B Platform, crude oil will be metered and then piped to two CALM Buoys located approximately 4,710 feet and 6,085 feet from the Platform.

The Applicant has designed the Project with two, anchored CALM Buoys to which VLCCs (or other crude oil carriers) will moor for loading. A mooring hawser will be used to moor the vessel to the CALM Buoy. The intent is for only one CALM Buoy to be used for loading at any one time but there could be a possibility that both CALM Buoys could be used at the same time.

The CALM Buoys will be moored with chains to the seafloor where driven pile anchors (or an engineered equivalent for the sedimentary conditions at the site) will provide the necessary holding ability for mooring of up to a VLCC class tanker. Anchors and associated anchor chain will be installed to provide the mooring for each of the CALM Buoys. Conservatively, for each CALM mooring system there will be eight 36-inch OD pin piles driven to 150 feet below the seafloor, using an underwater piling hammer (Menck 150 kilojoules or similar), and associated anchor chain installed to provide the mooring for each of the CALM Buoys. Final anchor locations, the size of the chains, pile diameter, and piling depth will be determined by the CALM Buoy provider during detailed design.

Each CALM Buoy system will have a PLEM. Each PLEM will be connected to their respective CALM Buoy with flexible underwater hoses. Two Crude Oil Loading Pipelines, approximately 4,710 and 6,085 feet in length, will be installed from the WC 509B Platform to the PLEM locations, one pipeline to each PLEM. The pipe will have a corrosion resistant outer coating and a Concrete Weight Coating. Each PLEM system will have pigging capabilities between the WC 509B Platform and the PLEM. The PLEMs will be installed on foundation piles or mudmats to distribute the weight of the PLEM to the seafloor. Details will be developed by the CALM Buoy provider during the Project's detailed engineering phase, including piling diameter and depth or mudmat design.

Floating and flexible 24-inch diameter hoses approximately 1,500 feet long will be installed for loading from the CALM Buoy to the VLCC (or other large seafaring crude carrier). During loading, the floating hoses will be recovered by one of the DWP support vessels, lifted to the VLCC (or other crude carrier) loading manifold, and connected to the receiving flange. The floating hoses will simply float on the surface of the water and will weathervane dependent on the current when not being used for loading. The floating hoses will contain a butterfly valve on the end that will be utilized to isolate the hose after loading is complete and prior to placing the hoses back in the water. Additionally, a blind flange will be installed to further prevent any potential contamination or leakage while the hose is floating and waiting for the next VLCC (or other large seafaring crude carrier) to be loaded.

The construction of the offshore facilities will not result in impacts to waters of the U.S., but will be structures within Section 10 waters and are described in Section 4.0 of this application.

1.4 ONSHORE FACILITIES

1.4.1 Onshore Pipeline

The Project will consist of a new build approximately 37-mile, 42-inch OD pipeline connecting the existing NT in Jefferson County, Texas, to the existing Stingray Mainline at Station 501 in Cameron Parish, Louisiana. The new build pipeline route begins at the proposed BMOP Pump Station and proceeds north across the Neches River continuing almost to Bridge City, Texas, before turning east/southeast and crossing Sabine Lake. After leaving Sabine Lake in Cameron Parish, Louisiana, the route proceeds east for approximately 11 miles to Station 501 where it ties into the existing Stingray Mainline.

The Applicant proposes to use a 150-foot-wide construction ROW in upland and wetland areas and a 300-foot-wide ROW for in-water construction in Sabine Lake to provide a safe work site and promote effective implementation of erosion control measures. In wetlands, the use of a 150-foot-wide ROW is necessary to avoid the potential safety hazards associated with saturated and/or granular soils, including shifting soils and trench wall collapse. Additionally, excavated spoil material typically will not stack and a wider area of temporary workspace (TWS) is required for spoil placement to avoid off-ROW areas. Following construction, the Applicant will retain a 50-foot-wide permanent ROW over the pipeline. The existing 36-inch OD pipeline maintains a 50-foot-wide permanent ROW.

The Project will utilize nine horizontal directional drills (HDDs) along the pipeline route to cross selected existing foreign pipelines, major roadways, federal channels, and major waterbodies, and also as a mitigating measure to avoid impacts to wetlands and/or sensitive resources. A description of the HDD method and the location of each HDD is included in Section 3.0 and **Table 1-2** and of this application.

Collocation of the new build pipeline will minimize impacts on vegetation communities during construction and operation of the pipeline system. Approximately 11.86 miles (32 percent) of the pipeline route is collocated with existing powerline, road, canal and/or foreign utility ROW. In addition, conversion of the approximate 103.4 miles of Stingray Mainline from natural gas to oil service will minimize impacts to onshore and offshore communities.

The construction of the onshore pipeline will result in temporary and permanent fill of waters of the U.S. Impacts to wetlands and waterbodies due to the construction of the onshore pipeline are discussed in Sections 3.1 and 4.1, respectively.

TABLE 1-1
Location of Proposed Onshore Project Facilities

Facility	Location (County/Parish, State)	Approximate Milepost	Approximate Length (miles)

Key:
LA – Louisiana
N/A – not applicable
PAC – permanent access canal
PAR – permanent access road
TAC – temporary access canal
TAR – temporary access road
TX – Texas

Notes:

[a] MLV-1 through MLV-6 are located along the pipeline permanent ROW. MLVs will also be installed within the facility boundaries of the BMOP Pump Station (MP 0.00), Station 501 (MP 37.02), and Station 701. Offshore, there will be one MLV at WC 148 and WC 509 as discussed in Topic Report 1 of Volume IIa of the Project's DWP Application.

[b] The four new permanent access roads (i.e., PAR-03, PAR-05, PAR-13, and PAR-15) will be required to extend existing roads to MLV sites.

[c] One new temporary access road (TAR-05-A) will be required to access the construction ROW in Orange County, TX. This temporary access road will be returned to pre-construction conditions following construction.

1.4.2 Aboveground Facilities

1.4.2.1 *BMOP Pump Station*

The BMOP Pump Station is located on approximately 8.2 acres in Jefferson County, Texas, adjacent to the existing NT on land that is currently being permitted for development in Jefferson County, Texas. The BMOP Pump Station site is proposed to be filled and developed as part of the "Nederland Terminal Buildout Project," which is anticipated to commence in January 2021, prior to construction of the BMOP Project. Therefore, the site will consist of developed land and will not result in wetland impacts. The pump station will include:

- 42-inch OD pipeline header;
- MLV;
- 48-inch OD pig launcher;
- Six 9,000 horsepower mainline electrical pumps;
- Metering equipment;
- Two electrical transformers in existing electrical substation (An existing substation owned by Entergy is located at NT that will supply the electrical power source for the BMOP Pump Station); and
- Permanent access road.

There will be no new temporary or permanent fill of waters of the U.S. for construction of BMOP Pump Station.

1.4.2.2 *Station 501*

The existing Station 501 is located at approximate MP 37 of the new 42-inch OD pipeline on approximately 0.5 acre in Cameron Parish, Louisiana. The new 42-inch OD onshore pipeline will tie into the existing 36-inch OD Stingray Mainline at this site. Station 501 will be expanded 1.6 acres to include a new pig receiver for the 42-inch OD pipeline termination, a new pig launcher for the existing 36-inch OD Stingray Mainline, and a new MLV. Approximately 0.8 acre of ATWS will be required outside of the existing facility during construction. All of Stingray's owned existing natural gas-related equipment will be removed from the Station and new crude oil pipeline facilities will be installed. The new 42-inch OD pipeline will tie into the existing 36-inch OD Stingray Mainline at the site.

The expansion of Station 501 will result in temporary and permanent fill of waters of the U.S. Impacts to wetlands and waterbodies due to the conversion of the existing facilities and installation of new facilities at Station 501 are discussed in Sections 3.1 and 4.1, respectively.

1.4.2.3 *Station 701*

The existing 32.1-acre Compressor Station 701 is located at MP 3.9 of the existing 36-inch OD Stingray Mainline in Cameron Parish, Louisiana. All of the existing natural gas equipment will be removed from the site except for two 10,000-barrel storage tanks. BMOP will maintain the office space, a natural gas interconnect (owned by others), and surge tanks. Approximately 1,000 feet of new 36-inch OD pipe will be installed across the Station to connect the 36-inch onshore pipeline segment from Station 501 to the 36-inch OD Mainline going to WC 509. Surge tanks, surge valves, and a new MLV will also be installed. The existing 10,000-barrel storage tanks located at Station 701 will be utilized as the surge relief tanks. Approximately 0.9 acre of ATWS will be required along the existing Mainline on the north side of the station for installation of the 36-inch OD pipe. Following construction, ATWS areas will be restored, as closely as practical, to pre-construction contours and allowed to naturally revegetate.

The conversion of the existing pipeline and installation of new facilities at Station 701 will result in temporary fill in waters of the U.S., but no permanent fill of waters of the U.S. Temporary impacts to wetlands due to conversion of Station 701 are discussed in Section 3.1.

1.4.2.4 *Stingray Tap Removal Site*

The existing ANR Tap (Stingray Tap Removal Site) is located at approximately MP 1.6 on the existing Stingray Mainline between Stations 501 and 701 in Cameron Parish, Louisiana. BMOP will install a new 36-inch OD pipeline segment following removal of the tap.

The construction activities for the Stingray Tap Removal will result in temporary fill in waters of the U.S., but no permanent fill of waters of the U.S. Temporary impacts to wetlands and waterbodies due to the construction activities for the Stingray Tap Removal are discussed in Sections 3.1 and 4.0, respectively.

1.4.2.5 *Mainline Valves*

MLVs are designed to divide a pipeline into segments for safety reasons, including shutting down product flow and allowing access to the pipeline from the surface. Six new MLVs will be installed within the permanent pipeline ROW of the new build pipeline. MLVs will also be installed at the BMOP Pump Station, Station 501, and Station 701. The sites for MLV-1 through MLV-4 in Orange County, Texas will be graded with gravel and/or shell. MLV-5 and MLV-6 in Cameron Parish, Louisiana will be installed on platforms due to the inundated and saturated conditions within the marsh. These valves will be used for isolation and spill control purposes and will be Emergency Flow Restricting Device valves.

MLVs will be installed in locations along the pipeline system that are accessible to authorized employees and that are protected from damage and tampering in accordance with U.S. Department of Transportation (USDOT) standards described in 49 CFR Part 195. The MLVs will also be installed in locations along the pipeline system that will minimize damage or pollution from accidental hazardous liquid discharges in accordance USDOT standards. The MLVs will be located in fenced sites and will have electric motor operators installed for operation either locally or remotely.

The construction of the MLVs will result in temporary and permanent fill of waters of the U.S. Impacts to wetlands and waterbodies due to the construction of the MLVs are discussed in Sections 3.1 and 4.1, respectively.

1.4.3 Temporary Facilities

1.4.3.1 *Staging Areas*

The Applicant is proposing to use staging areas during onshore construction to support HDD operations and equipment off-loading. The locations of the temporary staging areas are depicted on the mapping provided in **Appendix G**. Use of these staging areas will result in temporary impacts and will be restored to preconstruction conditions following construction.

The construction of temporary staging will result in temporary fill in waters of the U.S., but no permanent fill of waters of the U.S. Impacts to wetlands and waterbodies due to the construction of the temporary staging areas are discussed in Sections 3.0 and 4.0, respectively.

1.4.3.2 *Contractor and Pipe Storage Yards*

The Applicant plans to utilize existing pipe and contractor yards in the Project area that have been used on previous projects. Locations will be finalized once construction contractors are under contract.

It is anticipated that there will be no temporary or permanent fill of waters of the U.S. as a result of using the existing pipe and contractor yards.

1.4.4 Access Roads and Canals

The Applicant intends to utilize existing public roads, highways, and canals to access the sites during construction. Details of the planned temporary access roads and canals are provided in **Table 1-1**. Limited improvements (i.e., grading and gravel refresh) are planned for some existing private roads to support Project construction; however, widening of access roads is not anticipated to be required. One new temporary access road (i.e., TAR-05-A) will be required to access the construction ROW in Orange County, Texas. Access roads that will not be used for facility operations will be returned to pre-construction conditions or per landowner agreement following construction.

The construction of temporary road TAR-05-A will result in temporary fill in waters of the U.S., but no permanent fill of waters of the U.S. Temporary impacts to wetlands due to the construction of the TAR-05-A are discussed in Section 3.1.

Four new permanent access roads will be required to extend existing roads to MLV 1 through MLV 4 (i.e., PAR-03, PAR-05, PAR-13, and PAR-15). The existing facility sites have permanent gravel/paved access roads leading to the facilities as shown on the mapping provided in **Appendix G**.

The construction of permanent access roads will result in temporary fill and permanent fill of waters of the U.S. Impacts to wetlands due to the construction of the temporary staging areas are discussed in Section 3.1.

Existing canals to be used for construction equipment are necessary for HDD equipment, mats, and other materials necessary for pipeline construction to be brought to the work site. The access canals will not require improvements (i.e., dredging) for channel deepening or widening.

1.5 AVOIDANCE AND MINIMIZATION

1.5.1 Onshore Pipeline

Construction, operation, and maintenance of the Project facilities will be in accordance with all applicable rules and regulations, permits, and approvals.

In the development of the pipeline route the Applicant integrated the following Project designs to minimize and avoid potential impacts to wetlands and waterbodies:

- Minimized the footprint by using the existing NT site for the construction of the BMOP Pump Station;
- Conversion of existing facilities (Stingray Mainline, Station 501, and Station 701) to minimize footprint of new disturbance;
- Collocated the onshore pipeline to the extent possible (approximately 32 percent) with existing ROW to minimize impacts on vegetation communities during construction pipeline system;

- Conversion of the approximate 103.4 miles of Stingray Mainline from natural gas to oil service will minimize impacts to onshore and offshore communities;
- Crossed sensitive environmental land (i.e., Lower Neches Wildlife Management Area Nelda Stark Unit) and wetlands and waterbodies (i.e., Neches River) by using the HDD construction method. See **Table 1-2** for list of the nine proposed HDD crossings. The HDD crossings will avoid impacts to 10.6 acres of wetlands and 2.7 acres of waterbodies;
- Use "push/pull" or "float" techniques to place the pipe in the trench where water and other site conditions allow; and
- Use of existing roads and canals for Project access during construction.

To minimize and avoid potential impacts to wetlands and waterbodies during construction, the Applicant would adhere to measures in the Onshore Construction Best Management Practice (BMP) Plan (Onshore Construction BMP Plan [**Appendix B**]), Revegetation Plan (Appendix C-2 of Volume IIb of the Project's DWP Application), Spill Prevention and Response Plan (SPAR Plan [Appendix C-3 of Volume IIb of the Project's DWP Application]), and HDD Contingency Plan (Appendix C-5 of Volume IIb of the Project's DWP Application). During construction, the following best management practices (BMPs) will be implemented to minimize and avoid impacts to wetlands and waterbodies.

- Minimized the footprint of the proposed work activities and the duration of disturbances to the extent practicable to reduce impacts on wildlife resources and habitat;
- Equipment on the construction ROW will be minimized and, when used, would be of the type having the least environmental impact in saturated ground conditions. This equipment includes mats, marsh buggies, airboats, amphibious equipment, tracked equipment, and barges. The contractor will use discretion in choosing the equipment that would create the least ground pressure for the specific application; and
- ATWS areas are to be limited to the minimum needed to construct wetland and waterbody crossings.
- Installation and maintenance of erosion and sediment controls during construction in accordance with the Onshore Construction BMP Plan.
- Wetland and waterbody buffers (e.g., extra work area setbacks, refueling restrictions) are to be clearly marked in the field with signs and/or highly visible flagging until construction-related ground disturbing activities are complete.

During and after construction, erosion and sediment control measures will be installed and maintained until stabilization/revegetation of the Project. Temporary equipment or materials installed to provide access (e.g., timber mats or timber rip-rap) will be removed from wetlands and waterbodies at the completion of construction. Disturbances associated with temporary equipment access methods will be restored and stabilized after the bridging equipment and access materials are removed. Wetlands and waterbodies that are temporarily disturbed during construction will be restored to pre-construction conditions in accordance with the Onshore Construction BMP Plan (**Appendix B**) and Revegetation Plan (Appendix C-2 of Volume IIb of the Project's DWP Application).

TABLE 1-2
Listing of HDD Crossings to Minimize Impacts to Wetlands and Waterbodies

HDD ID Number	Start MP – End MP	Approximate Length (feet)	Feature Crossed[a]
HDD-01	1.60 – 1.25	3,457	Neches River
HDD-02	2.50 – 2.89	2,052	Foreign Pipelines and Canal
HDD-03	8.17 – 8.81	3,394	TPWD Lower Neches WMA Nelda Stark Unit
HDD-04	9.43 – 9.86	2,272	Foreign Pipeline
HDD-05	10.13 – 10.52	2,101	Gulf State Utilities Road, Powerhouse Road and Canal
HDD-06	12.35 – 12.99	3,384	SH 73/87
HDD-07	13.64 – 14.10	2,460	Sabine Lake North Shoreline
HDD-08	14.85 – 15.75	4,766	Gulf Intracoastal Waterway
HDD-09	20.41 – 20.81	2,109	Pipeline Crossing in Sabine Lake

Key:
HDD – horizontal direction drill
MP – milepost
SH – Texas State Highway
TPWD – Texas Parks and Wildlife Department
WMA – Wildlife Management Area

Notes:
[a] Waters of the U.S. will be avoided by all HDD crossing

1.6 CONSTRUCTION SCHEDULE

Construction of the Project is planned to begin in November 2021 for onshore fabrication and August 2022 for offshore installation with Project completion and commissioning scheduled for July 2023. Procurement of major platform equipment is expected to take 10 months. Deck fabrication, outfitting, and onshore pre-commissioning are expected to take 11 months with delivery to the offshore sites staggered to accommodate the tasks of the primary installation vessels. Loadout, transport, and installation will take approximately three months. Conversion of the Mainline to oil service, which will occur concurrently with prefabrication and construction of the other DWP components, will take approximately six months. Final offshore commissioning and startup activities will take approximately two months. Onshore pipeline construction, including the BMOP Pump Station, is planned to begin March 2022 and be complete by April 2023.

1.7 ADJOINING PROPERTY OWNERS

The onshore pipeline traverses the property of numerous property owners. A complete list of property owners adjoining the footprint of the onshore pipeline is provided in **Appendix C**.

1.8 ADDITIONAL FEDERAL, STATE, AND LOCAL CERTIFICATES AND APPROVALS

In addition to this Joint Permit Application, the Applicant is still seeking a number of additional federal, state, and local authorizations, certifications, and approvals for the Project. A complete list of permits and authorizations for the Project are included in **Appendix D**.

2.0 ALTERNATIVE ANALYSIS

In accordance with the DWPA of 1974, as amended and as implemented by 33 U.S. Code (USC) §§ 1503(c) and 1505 and 33 CFR Part 148, Subpart G, the Applicant conducted a robust alternate analysis of the Project. Included in this analysis, the Applicant evaluated the No Action Alternative, System Alternatives, and siting and routing alternatives for the DWP and onshore pipeline. This analysis will be used by USGS and MARAD as part of NEPA review of the Project. The complete Alternative Analysis can be found in Topic Report 2 “Alternative Analysis” in Volume IIa of the DWP Application for the Project. The bulk of text in that Topic Report is provided below.

2.1 DWP ALTERNATIVE ANALYSIS

As part of the analysis the Applicant completed a siting and alternative analysis that used a tiered approach to screen alternative locations for the proposed Project’s facilities. An overview of the Tier I, Tier II, and Tier III siting criteria used for the Project is provided in **Table 2-1**. The Tier I siting criteria were used to identify alternatives that could potentially satisfy the primary objectives of the proposed Project.

TABLE 2-1
Siting Criteria for the BMOP Project

Siting Criteria	Description
Tier I Siting Criteria	
Existing Facilities	To meet the needs for the proposed Project, oil loading, storage, and handling facilities are required. Existing crude oil loading, storage, and handling facilities, or existing facilities, which could be reconfigured were given preference to minimize the need for construction of new infrastructure.
Existing and Currently Underutilized Pipelines	To meet the capacity needs for the proposed Project, pipelines equal to or greater than 36 inches OD and that extend from onshore to offshore are required. Existing and currently underutilized pipelines were given preference so that construction of new pipelines would be avoided or minimized to the extent practicable.
Available for Lease	Located within a lease block that does not have a current active lease, as the operations of the DWP would not be compatible with other uses of a lease block.
Suitable Water Depth for the DWP	A minimum water depth of 75 feet is required to accommodate full loading of VLCCs[a] consistent with the Project’s purpose and need. Avoids the need for dredging.
Designated Shipping Fairway Access	Located within 2 to 8 miles of a designated shipping fairway to allow for the safe transit of VLCCs to the associated DWP without vessel interference (i.e., would also not otherwise impede or interfere with other commercial shipping operations).
Avoids Areas that would Preclude Permitting, Construction, and Operation of a DWP	Avoids locating the DWP within an area where it would not be possible to feasibly permit, construct, and/or operate a DWP (e.g., within an existing, anchorage area, fairway, marine sanctuary, National Wildlife Refuge, dredge disposal area, Significant Outer Continental Shelf (OCS) Sediment Resources, etc.).
Tier II Siting Criteria	
Proximity to Existing Facilities	Avoids existing infrastructure (e.g., platforms) that would preclude safe operation of the DWP or interfere with existing operations.

TABLE 2-1
Siting Criteria for the BMOP Project

Siting Criteria	Description
	Where proximity to existing infrastructure would not preclude safe operations or cause interference, it was given preference, avoiding and minimizing the need for greenfield construction to the extent practicable.
	Collocation with existing infrastructure where feasible and that does not impact third-party operations.
Suitable Area	Large enough contiguous area to accommodate the DWP facilities without geohazards or other obstructions. Does not include VLCC anchorage area.
Tier III Siting Criteria	
Proximity to Existing Marine Infrastructure	The DWP should be located in an area where it would not interfere with existing marine infrastructure (e.g., existing platforms) that is not being converted for the Project.
Proximity to Designated Anchorage Areas	Located outside of designated anchorage areas and at a distance away that would not impede or interfere with other commercial shipping operations.
Proximity to Designated Lightering Areas	Located outside of designated lightering areas and at a distance away that would not impede or interfere with lightering operations.
Proximity to Designated Ocean Dredged Material Disposal Areas	Located outside of designated Ocean Dredged Material Disposal areas and at a distance away that would not impede or interfere with lightering operations.
Proximity to National Marine Sanctuaries or National Wildlife Refuges	Located outside of a designated National Marine Sanctuary or National Wildlife Refuge and at a distance away that would avoid and minimize any potential impacts to sensitive resources.
Proximity to Bureau of Ocean Energy Management (BOEM) Topographic Feature Stipulation Blocks, Artificial Reefs	Located outside of designated BOEM Topographic Feature Stipulation Blocks and at a distance away that would avoid and minimize any potential impacts to sensitive hard-bottom resources.
Proximity to Shore-Based Support Facilities	Proximity to an established Louisiana or Texas shore-based port in order to facilitate transport of crew and supplies from shore-based operations needed for the operation of the DWP. In addition, the proximity of the DWP to established shore-based ports would facilitate any evacuations in the event of a storm, emergency, or rescue operation.
Proximity to Significant OCS Sediment Resources	Located outside of designated Significant OCS Sediment Resources areas and at a distance away that would not impede or interfere with sand resource operations.
Avoids Cultural Sites and Shipwrecks	Avoids and minimizes the potential for impacts to known cultural resource sites and shipwrecks.
Avoids Ordinance Disposal Areas	Avoids areas identified as ordinance disposal areas.
Avoids and Minimizes Disturbance to and Permanent Loss of Waters of the U.S.	Avoids and minimize the permanent loss of wetlands, waterbody, and seafloor habitat.
Avoids and Minimizes Disturbance to USFWS Designated Critical Habitat	Avoids and minimizes impacts to listed species and listed species habitat, including U.S. Fish and Wildlife Service (USFWS) designated critical habitat.

TABLE 2-1
Siting Criteria for the BMOP Project

Siting Criteria	Description
Avoids and Minimizes Disturbance to and Permanent Loss of Sensitive Coastal Resources	Avoids and minimizes disturbance to seagrasses and oysters.

Notes:
[a] MARAD and USCG, 2020.

2.2 ONSHORE PIPELINE ROUTE ALTERNATIVE ANALYSIS

For the alternative analysis of onshore pipeline route, five alternative onshore pipeline route alternatives between the existing NT storage facility (Jefferson County, Texas) and Station 501 (Cameron Parish, Louisiana) or Station 701 (Cameron Parish, Louisiana) were identified. A description of the alternatives is provided in **Table 2-2**.

TABLE 2-2
New Build Onshore Pipeline Route Alternatives

Alternative	Description	General Rationale
No. 1 (Preferred Alternative)	The route proceeds north out of the existing NT storage facility and crosses the Neches River continuing almost to Bridge City, Texas, before turning east/southeast and crossing Sabine Lake. After leaving Sabine Lake in Cameron Parish, Louisiana, the route parallels the Sabine National Wildlife Refuge (NWR) boundary to the south, proceeding directly east to Station 501.	The route avoids the Sabine NWR and congested areas south of Nederland (e.g., Port Arthur, Texas State Highway [SH]- 87).
No. 2	The route proceeds southeast out of the existing NT storage facility continuing along the western edge of Port Arthur, Texas. The route continues south/southeast paralleling at times existing pipelines and SH-87. Near Sabine, Texas, the route turns east crossing the Sabine Neches Waterway (SNWW) and into Louisiana. Within Louisiana, the route proceeds first northeast to meet up with Gulf Beach Highway and then east parallel to Gulf Beach Highway to Station 701.	The route avoids the Sabine NWR and crosses into Louisiana within the SNWW, avoiding Sabine Lake.
No. 3	The route proceeds north out of the existing NT storage facility and crosses the Neches River continuing north of Bridge City, Texas, before heading east and crossing into Cameron Parish, Louisiana. Once in Louisiana, the route turns south/southeast and crosses the Sabine NWR before reaching Station 501.	The route avoids Sabine Lake and congested areas south of Nederland (e.g., Port Arthur, SH-87).
No. 4	The route proceeds north out of the existing NT storage facility and crosses the Neches River before turning east/southeast. Heading east/southeast the route crosses south of the Bessie-Height Oil and Gas Field within open water. The route continues east/southeast through primarily open water areas and then crosses Sabine Lake. After leaving Sabine Lake in in Cameron Parish, Louisiana, the route parallels the Sabine NWR boundary to the south, proceeding directly east to Station 501.	The route avoids the Sabine NWR and congested areas south of Nederland (e.g., Port Arthur, SH-87) while maximizing the crossing of open water areas.
No. 5	The route proceeds north out of the existing NT storage facility and crosses the Neches River continuing almost to Bridge City, Texas, before turning east/southeast and crossing Sabine Lake. Within	The route avoids the Sabine NWR and congested areas south of

TABLE 2-2
New Build Onshore Pipeline Route Alternatives

Alternative	Description	General Rationale
	Sabine Lake the route continues south remaining west of the Texas/Louisiana border until reaching the SNWW. After leaving the SNWW in Cameron Parish, Louisiana, the route proceeds east/northeast to Station 501.	Nederland (e.g., Port Arthur, SH-87) and also avoids crossing into Louisiana until within the SNWW south of Sabine Lake.

Of the route alternatives considered, the Preferred Alternative is Route No. 1, which was found to be a relatively direct (i.e., shorter length) route with the least amount of environmental impacts when taking into consideration construction constraints (e.g., existing pipeline, congested areas, oil field crossings). Although Route No. 4, which maximizes the crossing of open water areas, would minimize potential impacts to noise sensitive areas and reduce the number of infrastructure crossings (e.g., highways), due to potential land use constraints and constructability considerations, it was not determined to be the preferred route. Route No. 4 would cross several areas that have been identified by the USACE as federal placement areas. Based on discussion with the USACE, due to planned widening of the Neches River Channel, these areas may be used considerably in the future. Further, Route No. 4 would cross the Bessie-Height Oil and Gas Field with its associated submerged infrastructure. Therefore, the Preferred Alternative is Route No. 1. **Table 2-3** provides a comparison of the route alternatives based on the pipeline siting criteria.

TABLE 2-3
Summary of Onshore Pipeline Alternatives

Criteria		Alternatives				
		No. 1 (Preferred Route)	**No. 2**	**No. 3**	**No. 4**	**No. 5**
Length (miles)	Total	37.0	46.0	37.4	34.6	50.7

TABLE 2-3
Summary of Onshore Pipeline Alternatives

Criteria	Alternatives No. 1 (Preferred Route)	No. 2	No. 3	No. 4	No. 5
Constructability Assessment	No significant issues identified and parallels existing corridors to the maximum extent practicable	Significant ROW constraints in the Nederland and Port Arthur, TX areas due to existing infrastructure	Significant ROW constraints in the Bridge City and Orange, TX areas due to existing infrastructure and requires construction within a National Wildlife Refuge	Similar to the preferred alternative, but requires avoiding impacts to the Bessie-Height Oil and Gas Field infrastructure	Similar to the preferred alternative, but is longer in length and requires more construction within Sabine Lake

Notes:

[a] Collocation includes linear infrastructure within 200 feet of the route based on centerline-to-centerline measurement for a minimum length of 100 feet.

[b] Based on National Land Cover Database (USGS, 2016).

[c] Includes evergreen, deciduous, mixed forested land, and woody wetlands.

[d] Includes herbaceous wetlands

[e] Includes rivers/streams, ponds, and lakes.

[f] Includes low, medium, and high intensity land cover, as well as developed, open space (e.g., right-of-way).

[g] Based on the National Wetlands Inventory dataset

[h] Based on National Hydrography Dataset. Includes Sabine Lake.

[i] Sabine Lake Public Oyster Area remained closed for the entire 2019-20 oyster season.

[j] Based on aerial interpretation.

2.3 ABOVEGROUND FACILITIES ALTERNATIVES ANALYSIS

Other than MLVs, there will be three onshore aboveground pipeline facilities: Station 501, Station 701, and the BMOP Pump Station. Station 501 and Station 701 are existing facilities that are being converted for the Project. Even with TWS and expansion of Station 501, any alternative would require constructing a new facility or converting a different existing facility. Construction of a new facility or use of a different existing facility would result in similar and likely greater environmental impacts. In addition, new piping would be required to connect these facilities with the existing Stingray Mainline. Therefore, alternatives to the converting of Station 501 and Station 701 were not further evaluated.

The location of the new BMOP Pump Station was developed as part of a prior expansion of the existing NT facility where oil storage already exists. A planned expansion of the NT facility will provide suitable land to build the new pump station and metering facilities without new impacts.

The immediate area surrounding the NT storage facility consists of wetland complexes. Siting of the new pump station in an adjacent, undeveloped location would result in greater environmental impacts (i.e., wetland habitat loss). Similarly, siting of the facility in an offsite location, distant from the existing storage facility, would likely require the need for additional infrastructure, such as new pipelines, power supply lines, and access, and would result in similar and likely greater environmental impacts. Thus, alternative locations for the BMOP Pump Station were not further evaluated.

2.4 SECTION 404(B)(1) COMPLIANCE

The Applicant presents the following Section 404(B)(1) compliance evaluation due to expected impacts to waters of the U.S.

2.4.1 Finding of Practicable Alternatives

The Applicant conducted a robust alternatives analysis as part of the DWP Application. The alternative analysis is one of nine criteria used to determine a final decision for the issuance of a license under the DWPA of 1974, as amended, and as implemented by 33 USC §§ 1503(c) and 1505 and 33 CFR Part 148, Subpart G (Environmental Review Criteria for Deepwater Ports). Section 2.2 and 2.3 of this application provide a summary of the alternative analysis of the onshore pipeline and its associated aboveground facilities. A detailed alternative analysis of the entire Project can be found in Topic Report 2 “Alternative Analysis” in Volume IIa of the DWP Application for the Project. The results of alternatives analysis conducted concluded that there are no practicable alternatives to the proposed Project that would meet the site selection criteria necessary to meet the purpose and need of the Project.

2.4.2 Restrictions on Discharge

The onshore pipeline will result in the permanent fill of 0.59 acres of PEM wetlands for installation of three MLVs and four permanent access roads, the permanent fill of 1.62 acres of estuarine intertidal emergent (E2EM) wetlands and 0.005 acres of permanent fill of waterbodies for the conversion of the existing facilities and installation of new facilities at Station 501. The construction of the pipeline ROW, temporary and pipe storage yards roads, permanent and temporary canals, pump station, staging areas, temporary contractor yard and pipe storage yards will not result in the permanent fill of waters of the U.S. The Applicant will not discharge any temporary fill material that would:

- Cause or contribute, after consideration of disposal site dilution and dispersion, to violations of any applicable state water quality standards;

- Violate any applicable toxic effluent standard or prohibition under Section 307 of the CWA;
- Jeopardize the continued existence of species listed as endangered or threatened under the Endangered Species Act (ESA), as amended, or results in the likelihood of the destruction or adverse modification of a habitat that is determined by the Secretary of Interior or Commerce, as appropriate, to be a critical habitat under the ESA , as amended; or
- Violate any requirement imposed by the Secretary of Commerce to protect any marine sanctuary designated under Title III of the Marine Protection, Research, and Sanctuaries Act of 1972.

The Applicant will follow the Project's Onshore Construction BMP Plan (**Appendix B**), and SPAR Plan (Appendix C-3 of Volume IIb of the Project's DWP Application) to prevent impacts to waters of the U.S. due to stormwater runoff or inadvertent releases during construction of the onshore pipeline. The Applicant will also secure Section 401 Water Quality Certification and all other applicable state permits related to water withdrawal or water discharge permits, as applicable, prior to the start of construction within waters of U.S. See **Appendix D** for a list of environmental permits and authorizations required in each state and the status of the permit or authorization.

Additionally, the Applicant is currently conducting consultation with the U.S. Fish and Wildlife Service (USFWS) and National Oceanic and Atmospheric Administration Fisheries (NOAA Fisheries) to assess, avoid, minimize, and mitigate any impacts to federally listed endangered and threatened species and will continue consultation throughout the permitting process to identify adequate avoidance, minimization, and mitigation measures for any potential Project impacts to ensure these impacts do not jeopardize the continued existence of any federally listed species.

2.4.3 Findings of Significant Degradation

The Applicant will take steps necessary to ensure no effects contributing to significant degradation would occur, including:

- Significantly adverse effects of the discharge of pollutants on human health or welfare, including, but not limited to, effects on municipal water supplies, plankton, fish, shellfish, wildlife, and special aquatic sites;
- Significantly adverse effects of the discharge of pollutants on life stages of aquatic life and other wildlife dependent on aquatic ecosystems, including the transfer, concentration, and spread of pollutants or their byproducts outside of the disposal site through biological, physical, and chemical processes;
- Significantly adverse effects of the discharge of pollutants on aquatic ecosystem diversity, productivity, and stability (Note: Such effects may include, but are not limited to, loss of fish and wildlife habitat or loss of a wetland to assimilate nutrients, purify water, or reduce wave energy.); or
- Significantly adverse effects of discharge of pollutants on recreational, aesthetic, and economical values.

During construction, the Applicant will follow the Project's Onshore Construction BMP Plan (**Appendix B**) and SPAR Plan (Appendix C-3 of Volume IIb of the Project's DWP Application) to minimize, to the extent maximum extent practicable, migration of sediment from work areas into waters of the U.S. and to prevent contaminants associated with construction materials from entering waters of the U.S.

2.4.4 Findings of Appropriate and Practicable Minimization

As detailed in Section 2 , "Alternatives Analysis," Section 3.1, "Wetland Impacts," and Section 4.1, "Surface Waters Impacts," of this application, the Applicant has evaluated impacts to wetlands and waterbodies, as well as other environmental impacts, throughout the route selection process. Project design incorporated routing selection and construction techniques to avoid and minimize impacts to wetlands, to the maximum extent practicable. Route alternatives along the proposed route were evaluated to minimize impacts to wetlands and other sensitive environmental resources. Conversion of the existing Stingray Mainline avoids impacts over 5 miles of ROW. The Applicant has also added HDD crossing to avoid impacts to wetlands and waterbodies, by avoiding 10.6 acres of wetlands and 2.7 acres of waterbodies. The use of existing facilities (i.e., NT, Station 501, Station 701) for the location of some of the onshore pipeline's aboveground facilities has minimized temporary and permanent impacts to wetlands and waterbodies. Additional measures the Applicant will implement to minimize impacts to water of the U.S. can be found in Section 1.5 of this application.

2.4.5 Factual Determination

2.4.5.1 *Physical Substrate Determinations*

The onshore pipeline will traverse a wide variety of substrates. A detailed description and analysis of the soils within the footprint of the onshore pipeline can be found in Topic Report 7 "Soil and Geologic Resources" of Volume IIb of the DWP Application for the Project. Fill material in wetlands during installation of the pipeline will be native material and will generally be restricted to spoil removed from the pipeline trench and, if unsaturated, segregated topsoil. The presence/absence of saturated soils within a wetland feature will depend on the field conditions present during the time of construction. Based on field condition of the wetland as determined by the Environmental Inspector, any portion of the topsoil up to 12 inches that is stackable will be segregated. Topsoil segregation will not occur if the soil is inundated or saturated and the topsoil and subsoil will not stack. Therefore, the Applicant will strip and store the topsoil down to the point of saturation, depending on topsoil depth and site-specific water table conditions. The maximum depth that topsoil will be segregated is 12 inches, even in a scenario where more than 12 inches is present. Environmental Inspectors will provide guidance to the construction contractor when and how much topsoil should be segregated within a wetland based on the conditions observed in the field. Once installation is complete, the trench spoil will be placed back into the trench. Excess material will be deposited in nearby uplands. Contours will be restored to match pre-construction contours. The construction of the onshore pipeline will result in the permanent fill of 0.59 acres of PEM wetlands for installation of three MLVs and four permanent access roads, the permanent fill of 1.62 acres into E2EM and 0.005 acres of permanent fill of waterbodies for the conversion of the existing facilities and installation of new facilities at Station 501.

The Applicant will follow the Onshore Construction BMP Plan (**Appendix B**) and the Project's Revegetation Plan (Appendix C-2 of Volume IIb of the Project's DWP Application) to minimize soil layer mixing and compaction within wetlands. The Applicant does not anticipate a significant impact to the composition of the substrates within waters of the U.S. that are traversed by the onshore pipeline.

2.4.5.2 *Water Circulation, Fluctuation, and Salinity Determinations*

The onshore pipeline has the potential to impact water circulation and fluctuation of wetlands and waterbodies within the construction footprint. However, these impacts will be temporary in nature and limited to construction of the onshore pipeline. The Applicant will follow the Project's Onshore Construction BMP Plan (**Appendix B**) during construction. The measures outlined in the plan are designed to minimize impacts to wetlands and waterbodies. Operation of the onshore pipeline will not affect the water circulation, fluctuation, or salinity of the wetlands and waterbodies within the construction footprint.

2.4.5.3 *Suspended Particulate/Turbidity Determinations*

Construction of the Project has the potential to temporarily increase the suspended particulates in wetlands and waterbodies traversed by the onshore pipeline, as well as in adjacent wetlands and waterbodies; however, these impacts will be temporary in nature. Temporary increases in turbidity due to construction activities will be minimized, to the maximum extent practicable, by following the Onshore Construction BMP Plan (**Appendix B**). Once construction is finished and restoration is complete, impacts due to suspended particulates/turbidity within wetlands and waterbodies traversed by and waterbodies adjacent to the onshore pipeline will be insignificant.

2.4.5.4 *Contaminant Determinations*

The onshore pipeline is not anticipated to cross or impact any potentially contaminated sites. In the event that substances that could potentially be considered waste and/or contaminated soils, as defined in applicable federal, state, and local regulations and guidelines are encountered during construction of the onshore pipeline, the Applicant will implement the measures in the Project’s Unanticipated Discovery of Contamination Plan (see Appendix C-4 of Volume IIb of the Project’s DWP Application) to prevent the spread of contamination.

2.4.5.5 *Aquatic Ecosystem and Organism Determinations*

Direct impacts to the aquatic ecosystems and organisms will occur during construction and operation of the Project. Impacts resulting from construction within wetlands and waterbodies will be localized, and construction activities will be largely temporary. Impacts to waterbodies and wetlands will be minimized through the use the HDD method (to cross the Neches River, canal to Neches River, ICWW, and the northern Sabine Lake shoreline approach), the lay barge method (to cross parts of Sabine Lake).

Open-cut construction in Sabine Lake has the potential to impact water quality due to the resuspension of sediment into the water column. Dredging and excavation operations necessary to install the pipeline through Sabine Lake may suspend sediment and affect water quality and aquatic resources. Sediments may be resuspended during trench excavation and from spoil pile erosion due to wind and wave forces. These lake processes could result in additional impacts on water quality and aquatic resources. The suspended solids and turbidity levels will decline to ambient levels following completion of construction. Turbidity resulting from trenching could reduce light penetration and the corresponding primary production of aquatic plants, algae, and phytoplankton. Additionally, the potential resuspension of organic materials and sediments could cause an increase in biological and chemical oxygen demand along the construction ROW. Lower dissolved oxygen concentrations could cause a temporary displacement of motile organisms and may stress or kill sessile or sedentary benthic organisms within the construction ROW. With the implementation of the Project’s Onshore Construction BMP Plan (**Appendix B**), SPAR Plan (Appendix C-3 of Volume IIb of the Project’s DWP Application), and HDD Contingency Plan (Appendix C-5 of Volume IIb of the Project’s DWP Application) it is anticipated that potential construction impacts to Sabine Lake will be short-term, and negligible (i.e., HDD method) to moderate (i.e., lay barge open cut method).

Indirect impacts could result from erosion and sedimentation, as well as impacts due to increased activity associated with construction. These impacts will be temporary and of only a very short duration. To minimize these impacts, Applicant will follow the Project's Onshore Construction BMP Plan and SPAR Plan.

Additionally, true seagrasses are not found in Sabine Lake (or the Neches River). Wigeon grass (*Ruppia maritima*) a submerged aquatic is sometimes considered a seagrass and does occur in Sabine Lake where it is found in bays and offshore of brackish marshes (USFWS, 2013; Guillen, et al., 2015). Its distribution and abundance within the lake has apparently not been mapped or quantified (Radloff et al., 2013). Benthic habitat surveys have been conducted for the onshore pipeline. No wigeon grass or other submerged aquatic vegetation was found within the onshore pipeline ROW or within 500 feet of the workspace. Details of the survey methods and the survey results are provided in Appendix D-3 of Volume IIb of the Project's DWP Application.

2.4.5.6 *Proposed Disposal Site Determinations*

Dredging will be required for pipeline construction across Sabine Lake for the location of open-cut construction using a lay barge. Dredging of the pipeline trench will be required for achieving the 4-foot minimum depth from lake bottom to top of pipe and within the floatation channels for the operation of the lay barges. Sediments excavated to install the pipeline will be temporarily sidecast in the lake adjacent to the pipeline trench. After the pipeline installation is complete, the pipe trench will be backfilled, and the lake bottom contours returned to preconstruction contours to the maximum extent practicable.

2.4.5.7 *Determination of Cumulative Effects on the Aquatic Ecosystem*

A summary of the cumulative effects analysis for wetland resources and surface waters is presented in Appendix C "Framework for Cumulative Impacts Analysis," of Volume IIa of the Project's DWP Application. The analysis concluded that the Applicant would employ a number of BMPs to minimize impacts on aquatic resources (see Section 1.5 of this application). As a result, the proposed Project, in combination with other past, present, and reasonably foreseeable projects and based on the extent of resources in the area of influence, would have short-term, minor cumulative impacts on water quality during construction.

2.4.5.8 *Determination of Secondary Effects on the Aquatic Ecosystem*

Secondary effects will include impacts as a result of stormwater runoff, wind erosion, and impacts to wildlife due to increased activity from construction and operation of the Project. During construction, the Applicant will implement BMPs measures outlined in the Project's Onshore Construction BMP Plan (**Appendix B**) and SPAR Plan to minimize impacts to adjacent aquatic resources as a result of stormwater runoff and wind erosion. Impacts to wildlife are addressed in the Topic Report 5 "Wildlife and Protected Species", Volume IIb of the Project's DWP Application and will be addressed during the Project's Section 7 consultation process with USFWS and NOAA Fisheries.

3.0 WETLAND RESOURCES

Wetland and aquatic habitats identified along the Pipeline System are comprised of two major systems (estuarine and palustrine) in the Cowardin classification system (Cowardin et al,. 1979). Estuarine habitats are semi-enclosed but have at least sporadic access to open water and are at least occasionally diluted to brackish salinities by freshwater inflow. Palustrine habitats include non-tidal wetlands as well as tidal wetlands with salinities below 0.5 parts per thousand that are situated shoreward of lakes, rivers, or estuaries

(Cowardin et al., 1979). The Project traverses several wetland types in Texas and Louisiana, including herbaceous wetlands, marshes, scrub-shrub wetlands, and forested wetlands. Wetland systems within the Project area are defined in **Table 3-1**. **Appendix E** contains a table of the wetlands that were evaluated, and the finding of the analysis and **Appendix G** contains maps depicting the location of the wetlands within the footprint of the onshore pipeline.

TABLE 3-1
Wetland Types in the Project Area

Wetland Type	Wetland Code	Description
Estuarine intertidal emergent wetland	E2EM	Estuarine emergent wetlands characterized by erect, rooted, herbaceous hydrophytes, excluding mosses and lichens that are present for most growing season in most years. These plants may be temporarily to permanently flooded at the base but do not tolerate prolonged inundation of the entire plant. **Dominant Vegetation**: smooth cordgrass (*Spartina alterniflora*), common reed (*Phragmites australis*), saltmeadow cordgrass (*Spartina patens*), sturdy bulrush (*Bolboschoenus robustus*)
Palustrine emergent wetland	PEM	Palustrine emergent wetlands are characterized by erect, rooted, herbaceous hydrophytes, excluding mosses and lichens. This vegetation is present for most of the growing season in most years. These wetlands are usually dominated by perennial plants. All water regimes are included except those irregularly exposed. In areas with relatively stable climatic conditions, emergent wetlands maintain the same appearance year after year. **Dominant Vegetation**: alligator weed (*Alternanthera philoxeroides*), green flatsedge (*Cyperus virens*), Gulf Coast spikerush (*Eleocharis cellulose*), sand spikerush (*Eleocharis montevidensis*), longtom (*Paspalum denticulatum*), southern cattail (*Typha domingensis*), and giant cutgrass (*Zizaniopsis miliacea*)
	PEMx	**Dominant Vegetation:** broadleaf cattail (*Typha latifolia*) and sand spikerush
Palustrine scrub-shrub wetland	PSS	Scrub-shrub wetlands include areas dominated by woody vegetation less than 6 meters tall. Vegetation forms found in this wetland type include true shrubs, young trees, and trees or shrubs that are small or stunted because of environmental conditions. Scrub-shrub wetlands may represent a successional stage leading to a forested wetland or they may be relatively stable communities. **Dominant Vegetation:** Chinese tallow (*Triadica sebifera*) and broadleaf arrowhead (*Sagittaria latifolia*)
Palustrine forested wetland	PFO	Forested wetlands are characterized by woody vegetation that is 6 meters tall or taller. Forested wetlands are most common in the eastern U.S. and in those sections of the West where moisture is relatively abundant, particularly along rivers and in the mountains. Forested wetlands normally possess an overstory of trees, an understory of young trees or shrubs, and an herbaceous layer. **Dominant Vegetation:** black willow (*Salix nigra*), Chinese tallow, sweet gum (*Liquidambar styraciflua*), sender woodoats (*Chasmanthium laxum*), sand spikerush, alligator weed

Pipeline construction will cross wetlands with one of the following crossing methods:

- Open Cut Method
- Push/Pull Method
- HDD

Open Cut Method

At open cut wetland crossings, a 150-foot-wide construction ROW will be required to avoid the potential safety hazards associated with saturated and/or granular soils, including shifting soils and trench wall collapse. Typical saturated and unsaturated construction ROW configuration drawings are provided in **Appendix H**. The Applicant will implement the mitigation measures outlined in its Project's Onshore Construction BMP Plan (**Appendix B**) to minimize potential impacts to wetlands and adjacent vegetation during construction.

For standard open cut pipeline construction method, the clearing of vegetation in wetlands will be limited to trees and shrubs, which will be cut flush with the surface of the ground and removed from the wetland. Stump removal, grading, topsoil segregation, and excavation will be limited to the area immediately over the trenchline. A limited amount of stump removal and grading may be conducted in other areas to ensure a safe working environment.

In unsaturated wetlands where soils are stackable, up to 12 inches of topsoil from the trenchline will be stripped and stored separately from the subsoil. Implementation of proper topsoil segregation, where necessary, will help ensure post-construction revegetation success, thereby minimizing the potential for erosion due to lack of vegetative cover. Topsoil will be segregated along the working side of the construction workspace. The travel side of the workspace will be matted as needed to avoid rutting and mixing of topsoil and subsoils. Topsoil segregation generally will not be possible in saturated soils. Subsoil will be stockpiled separately from topsoil. The segregated topsoil and subsoil stockpiles will be replaced in the proper order during backfilling and final grading.

Prior to backfilling, trench breakers will be installed where necessary to prevent the subsurface drainage of water from wetlands. Where topsoil has been segregated from subsoil, the subsoil will be backfilled first followed by the topsoil. Equipment mats, terra mats, and timber riprap will be removed from wetlands following backfilling. Once revegetation is successful, sediment barriers will be removed from the ROW and disposed of properly.

Areas temporarily disturbed during construction will be restored to their pre-existing contours, to the maximum extent practicable, and allowed to naturally revegetate. Revegetation measures will be implemented in accordance with the Project's Revegetation Plan (Appendix C-2 of Volume IIb of the Project's DWP Application).

Push/Pull Method

The push/pull method will be utilized in inundated or excessively wet areas along the pipeline route where soils are not stackable or segregate easily. For the push/pull method, a 150-foot-wide construction ROW will be required to avoid the potential safety hazards associated with excavation of the pipeline flotation ditch and temporary storage of spoil. A typical ROW configuration drawing for the push/pull method is provided in **Appendix H**. The increased width of the construction ROW will reduce storage pile height and prevent material from extending beyond the limits of permitted impacts and reentering the trench prior to placement of the concrete-coated pipe.

The push/pull technique involves stringing and welding the pipeline outside of the wetland and excavating the trench through the wetland using tracked excavator suited for working in saturated or inundated conditions. The water that seeps into the trench is used as the vehicle to “float” the pipeline into place together with a winch and flotation devices that will be attached to the pipe. After the pipeline is floated into place, the floats are removed, allowing the pipeline to sink into the trench. Pipe installed in saturated wetlands is typically coated with concrete or equipped with set-on weights to provide negative buoyancy. After the pipeline sinks to the bottom of the trench, a tracked excavator suited for working in saturated or inundated conditions will backfill the trench and complete cleanup. Topsoil segregation generally will not be possible in inundated wetland soils.

Push sites in open-water areas will consist of several shallow-draft spud barges connected together to provide a working platform. At the push site, various pipeline operations will take place, including pipe make-up, welding, non-destructive testing, joint coating and coating repairs, and installation of flotation apparatus. Where there is standing water, only enough clearing and trenching will be done to accommodate installation of the pipe. Each excavator used will have a lateral reach sufficient to place spoil within the 300-foot-wide construction ROW. Pipe stringing and lowering in the push lay method will be similar to that described in the conventional lay method.

Equipment on the construction ROW will be minimized and, when used, would be of the type having the least environmental impact in saturated ground conditions. This equipment includes mats, marsh buggies, airboats, amphibious equipment, tracked equipment, and barges. The contractor will use discretion in choosing the equipment that would create the least ground pressure for the specific application. Construction of the Project will comply with applicable permit requirements.

Horizontal Directional Drill (HDD)

An HDD is a trenchless crossing method that involves drilling a hole under the waterbody (or other sensitive features) and pulling a pre-fabricated pipe segment through the hole. The HDD construction method will be used at nine locations onshore, including wetland or waterbody features, major roads and utilities (i.e., foreign pipelines), and sensitive environmental land. Some TWSs will be used in between the HDD entry and exit points for travel lanes to minimize construction equipment move-arounds and to monitor and survey the drill path during construction. Site specific HDD crossings drawings are in **Appendix I** and typical construction configuration drawings for the HDD crossing are provided in **Appendix H**.

The HDD method involves establishing land-based staging areas along both sides of the proposed crossing in order to avoid trenching in sensitive areas. The process commences with the boring of a pilot hole beneath the waterbody or other feature to be avoided, then enlarging the hole with one or more passes of a reamer until the hole is the necessary diameter to facilitate the pull-back (installation) of the pipeline. Once the remaining cleaning passes (swabs) are complete, a prefabricated pipe segment is pulled through the hole to complete the crossing.

Throughout the drilling process, a slurry of non-toxic, bentonite clay and water will be pressurized and pumped through the drilling head to lubricate the drill bit, remove drill cuttings and hold the hole open. This slurry, referred to as drilling mud or drilling fluid, has the potential to be inadvertently released to the surface through fractures, fissures, or during the drilling of the pilot hole when the pressurized drilling mud is seeking the path of least resistance. The path of least resistance is typically the path back along the drilled pilot hole. However, if the drill path becomes temporarily blocked or large fractures or fissures that lead to the surface are crossed, an inadvertent release could occur at the fracture or fissure location.

The drilling construction contractor will monitor the pipeline route and the circulation of drilling mud throughout the HDD operation for indications of an inadvertent drilling mud release and will immediately implement corrective actions if a release is observed or suspected. The Applicant has prepared an HDD Contingency Plan (Appendix C-5 of Volume IIb of the Project's DWP Application) that describes the methods that will be used to avoid or minimize the risk of drilling mud release, as well as the mitigative procedures that will be followed if an inadvertent release does occur.

Depending on the exact soil conditions at each HDD location, an additive to the bentonite mixture may be needed. For example, if the soil at a particular site contains reactive clay, sand, or cobble, a polymer additive may be needed.

3.1 WETLAND IMPACTS

Wetland impacts resulting from construction may vary based on construction techniques, and may include temporary ground disturbance, removal of wetland vegetation, temporary storage of dredged and/or excavated material, and rutting or compaction. Construction-related impacts will occur within the 150-foot-wide construction ROW as a result of proposed pipeline installation activities. The construction of the onshore pipeline will result in temporary impacts to 154.2 acres of E2EM and 60.8 acres of PEM.

The construction of the onshore pipeline will result in the permanent loss of 0.59 acres of PEM wetlands. The construction of MLV 1, MLV 2, and MLV 3 will result in 0.070 acres, 0.115 acres and 0.115 acres of permanent impact, respectively. The remaining permanent impacts to PEM wetlands are from the construction of PAR-03 (0.021 acres), PAR-05 (0.016 acres) PAR-13 (0.019) and PAR-15 (0.229). The permanent loss of 0.59 acres of PEM wetlands is within the USACE Galveston District

The construction of the onshore pipeline will also result in the permanent loss of 1.62 acres of E2EM wetlands due to the expansion of Station 501. The wetlands impacted at Station 501 are located within the USACE New Orleans District.

The construction of the onshore pipeline will result in impacts to 16.64 acres of PFO wetlands and 0.23 acres of PSS wetlands. For impacts to PFO wetlands along the pipeline construction ROW, 10.92 acres of the impacted PFO wetlands will occur in the TWS and 5.54 acres of impact will occur within the permanent ROW. The 10.92 acres of PFO wetlands within the temporary ROW will be allowed to revegetate to pre-construction conditions following construction and restoration. Due to maintenance and safety requirements for the permanent ROW, construction of the onshore pipeline will result in the permanent functional conversion of the 5.54 acres of PFO wetlands to PEM wetlands. Table 3-2 shows that 0.18 acre of PFO wetlands will be impacted by the construction of staging areas. This 0.18 acre of PFO wetlands in the staging area will be avoided during construction and therefore will not be impacted. The 0.23 acres of PSS is located in the TWS and ATWS. Following construction activities, all TWS and ATWS will be allowed to revegetate to pre-construction conditions. The dominant woody species within PSS wetlands (Wetland H-10) is Chinese tallow (*Triadica sebifera*), an invasive tree species. All of the temporary and permanent impacts to PFO and PSS wetlands are under the jurisdiction of the USACE Galveston District.

The Applicant has developed a compensatory mitigation plan for the Project that proposes mitigation to offset the permanent impacts to, and the permanent conversion of, waters of the U.S. due to the construction of the Project. See **Appendix J** for the Project's compensatory mitigation plan.

Key:
E2EM - estuarine intertidal emergent
Galv – Galveston District
N.O. – New Orleans District
PEM - palustrine emergent
PSS - palustrine scrub-shrub
PFO - palustrine forested
ROW - right-of-way

Notes:
[a] Construction Acreage reflects wetlands in workspace affected during construction activities (TWS and ATWS; excludes operational ROW); Wetlands disturbed will be allowed to natural revegetate and return to preconstruction conditions.
[b] Operational acreage reflects wetlands in new 50-foot wide permanent ROW to be acquired, except in areas which wetlands will be avoided by HDD, as listed in **Appendix E** of this application. E2EM and PEM wetland types will be allowed to revert to pre-construction vegetation conditions. PFO wetlands within the permanent ROW will be converted to PEM wetlands; however, there will be no permanent loss of wetlands.
[c] Permanent loss of wetlands will result in aboveground facility expansion areas at Station 501, MLV sites, and new permanent access roads. The BMOP Pump Station site is proposed to be developed as part of the NT Buildout Project, which is anticipated to commence in January 2021, prior to construction of the BMOP Project. Therefore, the site will consist of developed land and will not result in wetland impacts.
[d] The maintenance of the permanent ROW will result in the permanent function conversion of 5.54 acres of PFO wetlands to PEM wetlands
[e] The 0.18 acre of PFO wetlands within the staging areas will be avoided during construction
[f] Mainline work at the Stingray Tap Removal Site and Station 701 will include ATWS (construction impact) and Stingray Mainline permanent ROW (i.e., temporary impacts in the operational ROW). These wetland areas will be restored to preconstruction conditions.
[g] Totals may not match sum of addends due to rounding.

4.0 SURFACE WATERS

The construction of the onshore and offshore portions of the Project will result in impacts to waters of the U.S., which also include some Section 10 waters.

The offshore facilities are located in Louisiana state waters and federal waters. State waters extend three nautical miles from the coastline, which is at approximately at MP 8 of the existing Stingray Mainline that extends from Station 501 to WC 509. The Applicant is not proposing any construction within state waters that would result in impacts to coastal resources or waters of the U.S. The remainder of the offshore facilities are in federal waters, approximately 99 statute miles off the coast of Cameron Parish, Louisiana, with an approximate water depth of 162 feet.

The onshore Project area is located within the Sabine Lake watershed (Hydrologic Unit Code [HUC] 12040201), Lower Neches watershed (HUC 12010005), and lower Calcasieu watershed (HUC 08080206) (USGS, 2019).

4.1 WATERBODY IMPACTS

4.1.1 Onshore Facilities

During the biological field surveys, waterbodies in the survey area were classified by the following NWI classifications:

- Estuarine, Subtidal, Unconsolidated Bottom – Unvegetated tidal habitats with continuously submerged substrate (unvegetated);
- Palustrine, Unconsolidated Bottom – Unvegetated natural drainage feature or pond;
- Palustrine, Unconsolidated Bottom, Excavated – Unvegetated excavated drainage feature; and
- Riverine, Lower Perennial Unconsolidated Bottom – Unvegetated natural drainage feature.

Appendix G contains a mapbook that shows the location of all of the waterbodies crossed by the onshore pipeline.

Appendix F contains a detailed table of all waterbody crossings by the Project and the proposed crossing method and subsequent impact total for each waterbody. The construction of the onshore pipeline will not result in permit fill in waterbodies.

Construction of the pipeline will result in temporary impacts to waterbodies from vegetation clearing, grading, excavation, and filling. To install pipelines under waterbodies, the Applicant will adopt the standard open-cut crossing method, lay barge method, push/pull technique, or the HDD crossing method. **Table F-1** identifies the crossing method for every waterbody crossed by the pipeline. **Table 1-2** identifies the location of the proposed HDD crossing of waterbodies by the pipeline.

Use of trenchless crossing methods including HDD will not involve any permanent dredge or fill impacts to waters of the U.S. Open-cut and push/pull crossings of waterbodies will be implemented using the same methodology as described in Section 3.0 of this application.

Sabine Lake is the largest waterbody crossed by the pipeline, as approximately 12 miles of the route is located within the Sabine Lake. True seagrasses are not found in Sabine Lake (or the Neches River). Wigeon grass a submerged aquatic is sometimes considered a seagrass and does occur in Sabine Lake where it is found in bays and offshore of brackish marshes (USFWS, 2013; Guillen, et al., 2015). Its distribution and abundance within the lake has apparently not been mapped or quantified (Radloff et al., 2013). Benthic habitat surveys have been conducted for the onshore pipeline. No wigeon grass or other submerged aquatic vegetation was found within the onshore pipeline ROW or within 500 feet of the workspace. Details of the survey methods and the survey results are provided in Appendix D-3 of Volume IIb of the Project's DWP Application.

The installation of pipeline across Sabine Lake will use a variety of construction methods including barge lay method (to cross open water), HDD method (to cross the Gulf Intracoastal Waterway (GIWW), northern shoreline, and a foreign pipeline), and the push/pull technique at the southern enter and exit shoreline of Sabine Lake. As depicted in the typical Sabine Lake construction corridor configuration drawing in **Appendix H**, the construction ROW will be 300 feet wide and the permanent ROW will be 50 feet wide. The pipeline will enter the lake along its northern shoreline via an HDD and will exit the lake along its southern shoreline via the push/pull crossing technique. With the exception of the northern shoreline, GIWW, and an existing foreign pipeline crossing which will be crossed via HDD, the remaining pipeline will be trenched into the Sabine Lake bottom using the barge lay method with a minimum depth of cover of four feet.

The barge lay method will be required for pipeline sections located in open water in Sabine Lake as it eliminates the need for land-based equipment and fill. In open water construction at Sabine Lake, the pipeline trench will be excavated using a barge-mounted clam-bucket (or equal) dredge and spoil materials will be sidecast and stored temporarily alongside the trench. Pipe segments will be coated with concrete and then loaded onto pipe barges and transported via tugboat to the lay barges positioned above the trench. Pipe will be offloaded to the lay barges where it will be stored until it can be welded onto the end of the pipeline string. While on the lay barge, pipe segments will be welded, coated, and non-destructively tested then the pipeline will be filled with water and sunk into the trench. The trench will be backfilled with spoil as the lay barges move down the line. Following backfill, the construction ROW will be restored to pre-construction condition and contours.

The existing foreign pipeline on the bottom of Sabine Lake will be crossed using the HDD method. A spud barge with an HDD rig and drilling fluid tanks will install the pipeline to a depth of at least 20 feet below the foreign pipeline. Support barges, one storing water for the drilling fluid tanks and the other bringing water from a freshwater source, will accompany the spud barge. Similar to the procedure described above for land-based HDDs, a lay barge will assemble the pipeline for pullback, coat and test the pipeline, fill it with water, and sink it into place. Once pulled through the bore hole, the pipeline on each side of the HDD will be brought to the surface for tie-in, coating, and testing.

The Project's push sites will be both land-based and water-based. Push sites in open-water areas will consist of several shallow-draft spud barges connected together to provide a working platform. At the push site, various pipeline operations will take place, including pipe make-up, welding, non-destructive testing, joint coating and coating repairs, and installation of flotation apparatus. Where there is standing water, only enough clearing and trenching will be done to accommodate installation of the pipe. Each excavator used will have a lateral reach sufficient to place spoil within the 300-foot-wide construction ROW. Pipe stringing and lowering in the push lay method will be similar to that described in the conventional lay method.

4.1.2 Section 10 Waters

The Project will cross four waterbodies regulated under Section 10: the Neches River, GIWW, Sabine Lake, and the GOM. The onshore pipeline will cross the Neches River, GIWW, and Sabine Lake and impacts to these waterbodies are discussed above in Section 4.1.

The construction of the offshore portion of the Project will result in temporary and permanent impacts to the Section 10 waters (i.e., GOM) due to the installation of the new structures in support of the DWP as described in Section 1.2.2.

The two Crude Oil Loading Pipelines, approximately 4,710 and 6,085 feet long that will be installed from the WC 509 Platform Complex to the PLEM and CALM locations, one for each PLEM and CALM Buoy. The pipelines will be laid on the seafloor using a typical pipelay barge using anchors then will be buried to a minimum of three feet below the natural seafloor from the top of the pipe using a jet sled. Installation of the two pipelines will result in temporary impacts and backfilling of the trench will occur via natural wave action.

The two CALM Buoys will be installed at separate locations in proximity to the PLEMs and will result in minor permanent impacts. The two CALM Buoys will be secured in location by an anchor and associated anchor chain. The PLEMs will be installed on foundation piles or mudmats to distribute the weight of the PLEM to the seafloor. The anchors will be installed via pile driving with the final anchor locations, size of chains, pile diameter, and piling depth to be determined by the CALM Buoy provider during detailed design.

5.0 FEDERALLY LISTED SPECIES AND ESSENTIAL FISH HABITAT

5.1 FEDERALLY LISTED SPECIES

Federally listed species under the protection of the ESA in the vicinity of the onshore portion of the Project were identified by a review of publicly available databases and through coordination with federal resource agencies. The Applicant used the USFWS Environmental Conservation Online System Information, Planning, and Conservation (IPaC) System consultation tool (USFWS, 2020) to generate a species list to fulfill the requirements of Section 7 of the ESA. The Applicant also consulted with USFWS Louisiana Ecological Services Field Office on February 12, 2020 and USFWS Texas Coastal Ecological Services Field Office on March 5, 2020. Following the initial consultation meetings, field surveys were conducted within the footprint of the onshore pipeline to evaluate the potential for the onshore Project area to support federally listed threatened and endangered species.

Based on agency consultation and data obtained from the USFWS IPaC System consultation tool (USFWS, 2020), nine federally listed threatened and endangered species and one candidate (proposed threatened) species may occur within the counties or parishes affected by the onshore pipeline (see **Table 5-1)** and 19 federally listed species may occur in the footprint of the offshore facilities (see **Table 5-2**). Based on the available habitat within the footprint of the onshore pipeline and biology of each species, the Project is not anticipated to adversely affect any federal listed species protected under the ESA. A more detailed assessment of the onshore pipeline's potential impact to federally listed threatened and endangered species can be found in Topic Report 5 of Volume IIb of the Project's DWP Application and a detailed discussion of the offshore facilities' potential impact to federally listed species can be found in Topic Report 6 of Volume IIa of the Project's DWP Application.

The final effects determination of the construction and operation of the Project on federally listed species will be made during MARAD's and USCG's Section 7 consultation with USFWS and NOAA Fisheries.

TABLE 5-1
Federally Listed Threatened and Endangered Species Potentially Occurring in the Footprint of the Onshore Pipeline

Common Name/ Scientific Name	Listing County/ Parish	Federal Status	Habitat Requirements	Potential to Occur in Footprint of the Onshore Pipeline	Preliminary Effects Determination
Birds					
Eastern black rail (*Laterallus jamaicensis jamaicensis*)	Jefferson County, TX and Cameron Parish LA	C PT[a]	Salt, brackish, and freshwater marshes, pond borders, wet meadows, and grassy swamps; nests in or along edge of marsh, sometimes on damp ground, but usually on mat of previous years dead grasses; nest usually hidden in marsh grass or at base of *Salicornia*	May Occur (Non-Nesting)	Not likely to jeopardize the continued existence of the species
Piping plover (*Charadrius melodus*)	Jefferson County, TX and Cameron Parish LA	T[a]	Breeding habitat is in the northern great plains, the shorelines of the great lakes, and the Atlantic coast. Wintering habitat consists of intertidal beaches and mudflats with sparse to no vegetation. Critical Habitat for his species is crossed by the existing Stingray Mainline.	May Occur (Non-Nesting)	May affect, not likely to adversely affect
Red knot **(***Calidris canutus rufa***)**	Jefferson and Orange County, TX and Cameron Parish LA	T[a]	Inhabits seacoasts on tidal flats and beaches, herbaceous wetland, and Tidal flat/shore. Winters along the Gulf Coast July-October.	May Occur (Non-Nesting)	May affect, not likely to adversely affect
Whooping crane (*Grus americana)*	Jefferson and Orange County, TX Cameron Parish LA	NEP-LA E-TX[a]	Inhabits salt marshes dominated by salt grass, dry prairies, and cypress or oak forests. Uses potholes surrounded by bulrush for nesting.	May Occur (Non-Nesting in Project Area)	May affect, not likely to adversely affect
Mammals					
West Indian manatee *(Tricheceus manatus latirostri)*	Jefferson and Orange County, TX and Cameron Parish LA	T[b]	Inhabits tropical and subtropical estuaries, freshwater rivers, and coastal waters. Relies on access to natural springs or warm freshwater ponds that contain aquatic vascular vegetation. They seek out quiet areas in riverine habitat for feeding, resting, mating, and nursing.	Unlikely to occur	May affect, not likely to adversely affect
Reptiles					

TABLE 5-1
Federally Listed Threatened and Endangered Species Potentially Occurring in the Footprint of the Onshore Pipeline

Common Name/ Scientific Name	Listing County/ Parish	Federal Status	Habitat Requirements	Potential to Occur in Footprint of the Onshore Pipeline	Preliminary Effects Determination
Green sea turtle (*Chelonia mydas*)	Jefferson County, TX	T	Gulf and bay system; shallow water seagrass beds, open water between feeding and nesting areas, barrier island beaches; adults are herbivorous feeding on sea grass and seaweed; juveniles are omnivorous feeding initially on marine invertebrates, then increasingly on sea grasses and seaweeds; nesting behavior extends from March to October, with peak activity in May and June.	May Occur (Not known to nest in Project Area)	May affect, not likely to adversely affect
Hawksbill sea turtle *(Eretmochelys imbricata)*	Jefferson County, TX and Cameron Parish LA	E	Nests from April to November on tropical and subtropical undisturbed deep sand beaches. Females climb over reefs and rocks to nest in beach vegetation. Nests nocturnally up to five times a season in 14-day intervals.	May Occur (Not known to nest in Project Area)	May affect, not likely to adversely affect
Kemp's Ridley sea turtle (*Lepidochelys kempii*)	Jefferson County, TX and Cameron Parish LA	E	Nests from April to July on tropical and subtropical soft sand beaches that are backed by dunes in Texas and Mexico. Nests diurnally up to 3 times a season in 14- to 28-day intervals.	May Occur (Not known to nest in Project Area)	May affect, not likely to adversely affect
Leatherback sea turtle *(Dermochelys coriacea)*	Jefferson County, TX and Cameron Parish LA	E	Nests from March to July on tropical and temperate sandy beaches backed with vegetation and in close proximity to deep rough seas. Beaches must be sloped sufficiently so that the distance to dry sand is limited.	May Occur (Not known to nest in Project Area)	May affect, not likely to adversely affect
Loggerhead sea turtle (*Caretta caretta)*	Jefferson County, TX and Cameron Parish LA	T	Gulf and bay system primarily for juveniles, adults are most pelagic of the sea turtles; omnivorous, shows a preference for mollusks, crustaceans, and coral; nests from April through November.	May Occur (Not known to nest in Project Area)	May affect, not likely to adversely affect

5.2 ESSENTIAL FISH HABITAT

An initial Essential Fish Habitat (EFH) Assessment, which evaluated the impacts to EFH and managed species as a result of construction and operation of the Project, was prepared by the Applicant and can be found as Appendix D of Volume IIa of the Project's DWP Application. The following is a summary of the EFH Assessment.

Under the Magnuson-Stevens Fisheries Conservation and Management Act, EFH is defined as "waters and substrate necessary to fish for spawning, breeding, feeding, or growth to maturity" (16 USC § 1802(10)), and NOAA Fisheries promotes the protection of EFH in review of projects conducted under federal permits, licenses, or authorities that have the potential to impact EFH. Species are managed by NOAA Fisheries under fishery management plans (FMPs), with some FMPs including groups of species with similar life histories and habitats. FMPs have been developed and EFH designated for several groups of species in the Gulf of Mexico, including red drum (*Sciaenops ocellatus*), coastal migratory pelagic species, reef fish, and shrimp. EFH for highly migratory species, such as tunas, sharks, and billfish, is described under a separate FMP, due to similar life history and migratory habits.

EFH from five of the managed fisheries (Shrimp FMP, Red Drum FMP, Reef Fish FMP, Coastal Migratory Pelagics FMP, and Highly Migratory Species FMP) in the GOM occurs in the northern GOM where the Project is located. EFH for red drum occurs only in estuarine (inshore) portions of the Project area. EFH for three of the fisheries—shrimp, reef fish, and coastal migratory pelagics—encompasses much of the continental shelf in the northcentral GOM including all of the offshore Project area as well as the inshore Project area. The Highly Migratory Species FMP provides for management of a large number of species including many species of tuna, billfish, and sharks. EFH for most of the highly migratory species is located off the continental shelf and outside the Project area; however, EFH for a number of shark species encompasses portions of the shelf and the Project area. A full description of the FMP that overlap the Project area can be found in the Project's EFH Assessment (Appendix D of Volume IIa of the Project's DWP Application).

TABLE 5-3
Designated Essential Fish Habitat in the Vicinity of the Project Area

Fishery	Within Northcentral Gulf of Mexico[a,b]	Within Inshore Project Area[a,c]	Within Offshore Project Area[a,d]
Coral	Yes	No	No[e]
Shrimp	Yes	Yes	Yes
Spiny lobster	No	No	No
Red drum	Yes	Yes	No
Coastal migratory pelagics	Yes	Yes	Yes
Reef fish	Yes	Yes	Yes
Highly migratory species	Yes	Yes[f]	Yes[f]

Notes:

[a] EFH as depicted by NOAA EFH mapper at: https://www.habitat.noaa.gov/application/efhmapper/index.html

[b] Northcentral GOM includes waters of continental shelf offshore of western Louisiana and eastern Texas.

[c] Inshore Project area includes Sabine Lake and all other lakes and streams traversed by the onshore portions of th Project;

[d] Offshore Project area includes only continental shelf waters in the northcentral GOM.

[e] All coral EFH is located >34 miles from Project footprint.

[f] Group includes numerous species; Project area is within EFH for some species and outside of EFH for other species.

5.2.1 EFH Habitats

Within the Project footprint, there are four EFH habitat types: emergent marsh, sand/shell bottoms, soft bottoms, and water column associated. The following is a description of the four EFH habitats and a detailed discussion of how the presence or absence of EFH habitat types within the Project footprint was determined is in Section 4.1 of the EFH Assessment (Appendix D of Volume IIa of the Project's DWP Application).

5.2.1.1 *Emergent Marshes*

Most of the eastern and northern shores of Sabine Lake consists of emergent marsh of two types: brackish marsh found along most of the eastern shoreline and intermediate marsh at the north end of the lake. Brackish marsh is dominated by emergent, salt-tolerant, herbaceous vegetation where salinities average about 8 parts per thousand. The dominant species in this habitat type is marsh hay cordgrass (*Spartina patens*), with varying densities of salt grass (*Distichlis spicata*), three-cornered grass (*Schoenoplectus olneyi*), saltmarsh bulrush (*S. robustus*), dwarf spikerush (*Eleocharis parvula*), seashore paspalum (*Paspalum vaginatum*), black needlerush (*Juncus roemarianus*), coastal water-hyssop (*Bacopa monnieri*), smooth cordgrass (*Spartina alterniflora*), and hogcane (*Spartina cynosuroides*) (Lester et al., 2005). Intermediate marshes occur between fresh marsh and brackish marsh, with salinities between 3 and 10 ppt. Dominant emergent plant species include marsh hay cordgrass, roseau cane (*Phragmites australis*), bulltongue (*Sagittaria lancifolia*), coastal water-hyssop, *Eleocharis* spp., three-cornered grass, bullwhip (*Schoenoplectus californicus*), and *S. americanus* (LNHP, 2009; Lester et al., 2005; USFWS, 2013). Alligator weed (*Alternanthera philoxeroides*) is a common exotic invader in this habitat type (USFWS, 2013).

The onshore pipeline crosses approximately 8.6 miles of emergent marsh including the shoreline crossings of Sabine Lake. The northern shore crossing of the onshore pipeline in Sabine Lake will be installed using HDD crossing method to avoid impacts to adjacent marsh and existing breakwaters.

5.2.1.2 *Soft Bottom and Sand / Shell*

Soft bottom habitats are areas where the sediments are unconsolidated and consist of silt, clay, and sand. These habitats encompass most of the GOM seafloor and Sabine Lake water bottom. Bottom substrate of the inner continental shelf in coastal waters is described in Section 4.2 of Topic Report 4, "Marine Environment" (Volume IIa of the Project's DWP Application). Demersal fish fauna assemblages have affinities to sediment type and water depth and have been described that way based on the common shrimp species. The pink shrimp grounds are located over the calcareous sediments found east of DeSoto Canyon and along the Florida shelf. The terrigenous sediments west of the canyon out to a depth of 66 feet where finer sediments prevail are termed the white shrimp grounds, and brown shrimp grounds are located in coarser sediments offshore in water depths of 66 to 197 feet (Chittenden and McEachran, 1976; Gallaway, 1981).

The Gulf of Mexico Fishery Management Council (GMFMC [2004]) developed both detailed and summarized maps of GOM sediments, which indicate the entire offshore Project area is located in soft bottom habitats consisting of silty clay, sand/silt/clay, sandy silt, and sand. Project surveys indicate that the Project area within Sabine Lake is also within soft bottom habitats.

5.2.1.3 *Water Column Associated*

Pelagic or water column habitat exists wherever there is estuarine, nearshore, or offshore habitat. The estuarine habitat zone extends landward to the estuarine/freshwater interface, as identified by GMFMC using the National Wetlands Inventory and seaward to the GOM shoreline or barrier islands. The nearshore zone extends from the estuarine zone seaward to the 10-fathom or 60-foot isobath, and the offshore zone extends from the nearshore zone out to the 100-fathom isobath.

5.2.2 Potential Effects to EFH

Construction of the Project, including both the onshore and offshore facilities, will result in impacts to EFH. These impacts may result from construction activities for the onshore pipeline such as trenching, drilling, and hydrostatic testing and from construction activities for the DWP such as pile driving, jet sledding, hydrostatic testing, anchoring, and increased vessel traffic. These construction activities could result in adverse impacts to EFH due to increased turbidity and sedimentation, increased noise, increased vessel traffic, entrapment, inadvertent spills, etc. These potential impacts to EFH are discussed in detail in the Project's EFH Assessment (Appendix D of Volume IIa of the Project's DWP Application), as well as the mitigation measures that will be implemented to avoid or minimized the potential impacts.

6.0 CULTURAL RESOURCES

The Project is being reviewed under Section 106 of the National Historic Preservation Act (NHPA), as amended, and under NEPA. Prior to authorizing or undertaking a project, Section 106 of the NHPA requires federal agencies to take into account the effect of that undertaking on cultural resources listed or eligible for listing on the National Register of Historic Places (NRHP) and afford the Advisory Council for Historic Preservation an opportunity to comment on the undertaking. The Section 106 compliance process is coordinated on the state level by the State Historic Preservation Office (SHPO), represented in Texas by the Texas Historical Commission (THC) and in Louisiana by the Louisiana Office of Cultural Development (LOCD). The MARAD and USCG, as the joint lead federal agencies for the Project, must consult with the SHPO for each state and appropriate federally recognized Native American tribes regarding the effects of the Project on archaeological resources and historic properties.

Cultural resource investigations were conducted along the onshore pipeline route. These investigations were designed to identify all cultural resources (i.e., archeological sites, isolated finds, historic standing structures, and cemeteries) located within or immediately adjacent to the proposed onshore pipeline route that may be impacted adversely as a result of the planned undertaking. Prior to conducting field surveys, an initial desktop analysis was conducted. The initial data analysis included a review of available historical maps and aerial photographs; examination of applicable sources at local and regional archives and other relevant public records; detailed review of the online Texas archeological site files maintained by the THC, the site files maintained by the Louisiana Division of Archaeology, the NRHP files for both Texas and Louisiana, and cemetery databases. The intent of this literature search was to identify previously recorded archeological sites, historic standing structures, historic cemeteries, and NRHP properties located within or adjacent to the proposed onshore pipeline corridor. The collected information then was used to develop the project-specific archeological and historic contexts to employ during the assessment of the significance of any cultural resources identified within the Project area.

In Texas, archeological field survey included airboat survey, pedestrian survey, and systematic and/or judgmentally-placed shovel testing, when possible, within 200 meters (m) of all wetlands and water crossings, as well as within 100m of all known archeological sites. Within the Lower Neches Wildlife Management Area, airboat survey as well as pedestrian survey and systematic and/or judgmentally-placed shovel testing was completed, when possible, along the entire length of the pipeline ROW. Shovel tests were spaced at 50-m intervals along three parallel survey transects spaced 30 m apart within those portions of the pipeline ROW that were determined to possess a high probability of containing cultural deposits. Those portions of the investigated onshore pipeline corridor that are inundated were examined via airboat.

Shovel tests within the low probability segments of the pipeline ROW were placed at 100-m intervals along three parallel survey transects spaced 30 m apart. Those portions of the proposed pipeline ROW that cross inundated private property were examined by employing an airboat along the inundated segments.

In Louisiana, airboat survey as well as pedestrian survey and systematic and/or judgmentally-placed shovel testing, when possible, was conducted along the entire length of the onshore pipeline corridor. Access to this portion of the pipeline corridor was only possible by airboat. Within the pipeline corridor, visual inspection and pedestrian survey was augmented by the systematic and/or judgmentally-placed excavation of shovel or auger tests, where possible, at elevated landforms or other features. Some areas located along the pipeline corridor were heavily eroded and inundated to such an extent that shovel or auger testing could not be conducted. These areas were visually inspected from the airboat for cultural material and/or possible features. Shovel tests were not excavated in areas that contained standing water or in areas characterized by excessive disturbance. Within the bounds of the single previously identified cultural resource, shovel testing was conducted at 10-m intervals, when possible.

Within Sabine Lake, a detailed cultural resources analysis of all remote sensing data was conducted. All data were analyzed using currently acceptable scientific methodologies. The data then were correlated with a variety of shipwreck databases, geomorphic and historical research results, nautical charts, and any observations noted in survey logs during data collection. Submerged cultural resources include shipwrecks and disposal sites, and submerged prehistoric and historic archaeological sites. These objects and deposits normally can be detected with a remote sensing array that includes a marine magnetometer, side scan sonar, and a sub-bottom profiler.

Results of the pedestrian and airboat surveys within Texas and Louisiana did not identify any sites within the survey corridor that are eligible for listing under the NRHP. Additionally, the archeological evaluation of Sabine Lake did not identify any relict geomorphic features deemed potentially archaeologically significant within the survey corridor for the onshore pipeline.

Results of the cultural resource investigation of the onshore pipeline will be presented to the SHPOs for their concurrence. The offshore cultural resource investigation will be filed with MARAD/USCG and Bureau of Safety and Environmental Enforcement for their review. No cultural resources were identified within the offshore Project footprint.

Blue Marlin Offshore Port Project
Wetland Determination Report
Jefferson and Orange Counties, Texas, and Cameron Parish, Louisiana

1.0 Introduction

EXP Energy Services, Inc., on behalf of its client, Blue Marlin Offshore Port LLC, contracted with Benchmark Ecological Services, Inc. (Benchmark) to conduct a wetland determination study for the Blue Marlin Offshore Port (BMOP) Project (Project) in the Gulf of Mexico to provide United States (U.S.) crude oil loading services onto very large crude carriers (and other crude oil carriers) for export to the global market. The primary purpose of the Project will be to provide for safe and reliable long-term supply of crude oil for export to the global market. Oil for export will be transported out of the existing storage facility, Nederland Terminal which is owned by Sunoco Partners Marketing and Terminals, L.P. (Sunoco Terminals) and located in Nederland, Jefferson County, Texas. This report summarizes wetland determination efforts on approximately 40 miles of proposed pipeline and access routes for the Project starting in Jefferson and Orange Counties, Texas, and ending in Cameron Parish, Louisiana (Appendix A, Figure 1).

The objectives of this study were to determine the presence of wetlands and other jurisdictional habitats located within the boundaries of the survey area and to delineate the boundaries of identified wetlands according to the U.S. Army Corps of Engineers (USACE) guidelines. The survey area is approximately 300 feet in width as depicted in Figure 5 (Appendix A). Benchmark initiated a background investigation of the proposed survey area in February 2020 and conducted the field investigation from 3 March to 6 March, 27 May to 28 May, 1 June to 3 June, and 10 June 2020. Field delineations followed guidelines from the 1987 *U.S. Army Corps of Engineers Wetlands Delineation Manual* (the Manual) and the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Atlantic and Gulf Coastal Plains Region* (Version 2.0) (the Supplement). The following is a summary report describing the methods and findings of the study.

2.0 Methods

During the study, Benchmark reviewed background information and conducted a site characterization and wetland delineation.

2.1 Background Information

Benchmark obtained background information for the survey area from the following sources:

- Aerial Photographs,
- National Wetlands Inventory (NWI) Maps (Appendix A, Figure 2),
- Jefferson and Orange County, and Cameron Parish National Resources Conservation Service (NRCS) Soil Surveys (Appendix A, Figure 3),
- United States Geological Survey (USGS) Topographic Maps (Appendix A, Figure 4),
- Federal Emergency Management Agency (FEMA) Floodplain Data (Appendix A, Figure 4), and
- Local Hydric Soils Lists.

Figures are presented in Appendix A, and soils data are presented in Appendix B.

2.2 Site Characterization

Benchmark conducted field surveys throughout the entire survey area to evaluate vegetation, hydrology, and soils for wetland characteristics. Benchmark utilized airboats and unmanned aerial vehicles (UAVs) to collect data where pedestrian surveys could not be performed. A portion of the project area located between mile marker 0 and 0.75 in Jefferson County was previously permitted by Sunoco Terminals under permit #SWG-2007-01401 and was not included in this survey effort (Appendix A, Figure 5).

2.2.1 Vegetation Habitat Mapping

Benchmark used site maps and knowledge generated from background information to identify major vegetation communities during the field investigation. Aerial photographs were employed in the identification, verification, and mapping of community boundaries. Benchmark used a differential global positioning system (DGPS) to record plot locations and wetland community boundaries. Additionally, Benchmark captured drone imagery along the proposed route to aid in identifying vegetation communities and to document subsided marsh areas in Texas and Louisiana.

2.3 Wetland Delineation

Benchmark evaluated areas identified as potential wetlands during the initial background and site characterizations to determine whether they satisfied the three wetland criteria established by the Manual and the Supplement (hydrophytic vegetation, wetland hydrology, and hydric soils). Benchmark selected a representative sample plot within the survey area and analyzed hydrology, soils and vegetation within the plot. Benchmark made wetland determinations for each sample plot based on the evaluation results. Data were recorded on Routine Wetland Determination Forms (Appendix C).

2.4 Documentation

Detailed field notes recorded during the field investigation include, at a minimum, the following information:

- Project name, date, and personnel,
- Notes on plant communities,
- Notes on hydrologic features (*i.e.*, ditches, depressions, standing water, and surface soil saturation conditions, etc.),
- Notes on soils, and
- Photographs documenting field conditions and habitat characteristics (Appendix D).

All location coordinates were recorded using a DGPS programmed to record points only when the following criteria were satisfied (based on USACE Standard Operating Procedures for Recording Jurisdictional Determinations Using Global Positioning Systems):

- Minimum of 4 satellites,
- PDOP (Position Dilution of Precision) value no greater than 6, and
- All data recorded and reported in NAD 1983 Decimal Degrees with a degree of precision six digits past the decimal point.

All DGPS data were post-processed to sub-meter accuracy and are presented in electronic format (including ArcView shapefiles) on compact disc (Appendix E).

3.0 Results

Following are the combined results of the Background Information Review, Site Characterization, and Wetland Determination studies.

3.1 Background Information Review

NWI designated wetlands observed within the review area include 45 mapped types. Descriptions of the NWI Classifications are presented in Table 1.

Table 1 - Review Area NWI Classification

Cowardin Classification	Habitat Description
E1AB3L	Estuarine, Subtidal, Aquatic Bed, Rooted Vascular, Subtidal, Wetland
E1UBL	Estuarine, Subtidal, Unconsolidated Bottom, Subtidal
E1UBL5	Estuarine, Subtidal, Unconsolidated Bottom, Subtidal, Mesohaline (Brackish)
E1UBLx	Estuarine, Subtidal, Unconsolidated Bottom, Subtidal, excavated
E2AB3M	Estuarine, Intertidal, Aquatic Bed, Rooted Vascular, Irregularly exposed, Wetland
E2AB4M	Estuarine, Intertidal, Aquatic bed, Floating Vascular, Irregularly exposed, Wetland
E2EM1N	Estuarine, Intertidal, Emergent, Persistent, Regularly flooded, Wetland
E2EM1Ns	Estuarine, Intertidal, Emergent, Persistent, Regularly flooded, Spoil, Wetland
E2EM1P	Estuarine, Intertidal, Emergent, Persistent, Irregularly flooded, Wetland
E2EM1Ps	Estuarine, Intertidal, Emergent, Persistent, Irregularly flooded, Spoil, Wetland

PFO1R	Palustrine, Forested, Broad leaved deciduous, Seasonally flooded-tidal, Wetland
PFO1S	Palustrine, Forested, Broad leaved deciduous, Temporarily flooded-tidal, Wetland
PFO1Ss	Palustrine, Forested, Broad leaved deciduous, Temporarily flooded-tidal, Spoil,Wetland
PFO4A	Palustrine, Forested, Needle Leaved Evergreen, Temporarily flooded, Wetland
PSS1A	Palustrine, Scrub-Shrub, Broad leaved deciduous, Temporarily flooded, Wetland
PSS1Ah	Palustrine, Scrub-Shrub, Broad leaved deciduous, Temporarily flooded, Dike/Impounded, Wetland
PSS1C	Palustrine, Scrub-Shrub, Broad leaved deciduous, Seasonally flooded, Wetland

Table 1 - Review Area NWI Classification (Cont.)

Cowardin Classification	Habitat Description
PSS1Cd	Palustrine, Scrub-Shrub, Broad leaved deciduous, Seasonally flooded, Partly Drained/Ditched, Wetland
PSS1S	Palustrine, Scrub-Shrub, Broad leaved deciduous, Temporarily flooded-tidal, Wetland
PSS3A	Palustrine, Scrub-Shrub, Broad leaved evergreen, Temporarily flooded, Wetland
PUBFh	Palustrine, Unconsolidated bottom, Semipermanently flooded, Diked/Impounded
PUBHx	Palustrine, Unconsolidated bottom, Permanently flooded, excavated
R1UBV	Riverine, Tidal, Unconsolidated bottom, Permanently flooded-tidal
R1UBVx	Riverine, Tidal, Unconsolidated bottom, Permanently flooded-tidal, excavated
R4SBC	Riverine, Intermittent, Streambed, Seasonally flooded
R4SBCx	Riverine, Intermittent, Streambed, Season ally flooded, excavated
R5UBFx	Riverine, Unknown Perennial, Unconsolidated Bottom, Semipermanently flooded, excavated
R5UBH	Riverine, Unknown Perennial, Unconsolidated Bottom, Permanently flooded

The proposed route is located on a mixture of existing utility rights-of-way, estuarine marsh, and portions of Sabine Lake. The general drainage of the area is to the south and west. Many natural drainage laterals which facilitate drainage of surface water are present throughout the proposed route. Several significant waterbody crossings are located along the right-of-way (Appendix A, Figure 4). These include the Neches River and Sabine Lake. Portions of the survey area are located within the FEMA 100-year flood plain (Appendix A, Figure 4). The 2018 National Agriculture Imagery Program (NAIP) imagery exhibited potential wetland signatures in multiple locations throughout the survey area (Appendix A, Figure 2). Aerial photography indicates that the western portions of the survey area, located in Jefferson and Orange Counties, have been cleared in the past and are utilized as an existing pipeline right-of-way and maintained through periodic mowing. The eastern portion of the line in Cameron Parish is composed of primarily open marsh habitat. Review of the current US Department of Agriculture (USDA) soils data showed that the survey area includes 22 soil classifications for Jefferson and Orange Counties, Texas, and Cameron Parish, Louisiana. The survey area soil classifications for the project are listed in Table 2. Table 2 also indicates the soil classifications located within the survey area that are on the County and Parish Hydric Soils Lists. Descriptions of the soils are presented in Appendix B.

Table 2 - Review Area Soils

County/Parish	Symbol	Name	Hydric[1]
CAMERON PARISH	BA	Bancker muck, 0 to 0.2 percent slopes, very frequently flooded	Yes
	CR	Creole mucky clay	Yes
	Hb	Hackberry loamy fine sand	Yes
	Hm	Hackberry-Mermentau complex, gently undulating	Yes
	ME	Mermentau clay	Yes
	W	Water	N/A
JEFFERSON COUNTY	CsA	Creole mucky peat, 0 to 1 percent slopes, frequently flooded, tidal	Yes
	NuC	Neel-Urban land complex, 2 to 5 percent slopes, rarely flooded, tidal	Yes
ORANGE COUNTY	BaA	Bancker mucky peat, 0 to 1 percent slopes, frequently flooded, tidal	Yes
	BbA	Barbary mucky clay, 0 to 1 percent slopes, frequently flooded	Yes
	CamA	Camptown silt loam, 0 to 1 percent slopes, frequently ponded	Yes
	CsA	Creole mucky peat, 0 to 1 percent slopes, frequently flooded, tidal	Yes
	HatA	Hatliff-Pluck-Kian complex, 0 to 1 percent slopes, frequently flooded	Yes
	IjmB	Ijam clay, 0 to 2 percent slopes, frequently flooded, tidal	Yes
	NuC	Neel-Urban land complex, 2 to 5 percent slopes, rarely flooded, tidal	Yes
	OrdB	Orcadia silt loam, 0 to 2 percent slopes, rarely flooded	Yes
	OriA	Orcadia-Anahuac complex, 0 to 1 percent slopes	Yes
	OrnA	Orcadia-Anahuac complex, 0 to 1 percent slopes, rarely flooded	Yes
	OsdA	Orcadia-Aris complex, 0 to 1 percent slopes, rarely flooded	Yes

Table 2 - Review Area Soils (Cont.)

County/Parish	Symbol	Name	Hydric[1]
ORANGE COUNTY	OsuB	Orcadia-Urban land complex, 0 to 2 percent slopes	No
	OsvB	Orcadia-Urban land complex, 0 to 2 percent slopes, rarely flooded	No
	URLX	Urban land	No
	W	Water	N/A
	ZumA	Zummo muck, 0 to 1 percent slopes, frequently flooded, frequently ponded	Yes

[1] Jefferson and Orange Counties, Texas, and Cameron Parish, Louisiana Soil Survey, NRCS

3.2 Site Characterization

A site characterization survey was conducted from 3 March to 6 March, 27 May to 28 May, 1 June to 3 June, and 10 June 2020 to identify major vegetation communities and determine the presence of jurisdictional waters of the U.S., including wetlands.

3.2.1 Site Evaluation and Wetland Determination

Topography of the survey area ranged from gently sloping to nearly level. Vegetation varied from densely vegetated herbaceous grasslands and forests to fringe marsh and large subsided marsh complexes. The majority of the proposed route in Jefferson and Orange Counties follows existing cleared rights of way, and approximately 10 miles is located in Sabine Lake. The remaining eastern portion of the route in Cameron Parish is located in subsided marsh habitat. Land use varied but was predominantly agricultural in the form of farming, silviculture, and livestock production, as well as oil and gas production. Portions of the route in Orange County cross the Lower Neches Wildlife Management Area (WMA) which were comprised of marsh and lowland habitat. Natural drainage features consisted of intermittent stream segments, flowing perennial streams, and rivers. Site habitat and the major vegetative communities with typical vegetation found within the habitats identified in the survey area are presented in Table 3. Site habitat was further characterized using Cowardin classifications (Table 3) (Cowardin *et.al.*, 1979). Location of the wetlands and other jurisdictional waters of the U.S. identified during the field investigation are shown in Appendix A-Figure 5. Representative photographs of the habitats observed along the proposed route are presented in Appendix D.

Table 3 – Site Habitat Classification Descriptions

Classification	Habitat Description	Plant Species	Plant Common Names
E1UB	Estuarine, Subtidal, Unconsolidated Bottom	Unvegetated natural waterbody feature	N/A
E2EM	Estuarine, Intertidal, Emergent, Wetland	*Spartina alterniflora* *Phragmites australis* *Spartina patens* *Bolboschoenus robustus*	Smooth coordgrass Common reed Saltmeadow cordgrass Sturdy bulrush
PEM	Palustrine, Emergent, Wetland	*Alternanthera philoxeroides* *Cyperus virens* *Eleocharis cellulosa* *Eleocharis montevidensis* *Paspalum denticulatum* *Typha domingensis* *Zizaniopsis miliacea*	Alligator weed Green flatsedge Gulf Coast spikerush Sand spikerush Longtom Southern cattail Giant cutgrass
PEMx	Palustrine, Emergent, Wetland, excavated	*Typha latifolia* *Eleocharis montevidensis*	Broadleaf cattail Sand spikerush
PFO	Palustrine, Forested, Wetland	*Salix nigra* *Triadica sebifera* *Liquidambar styraciflua* *Chasmanthium laxum* *Eleocharis montevidensis* *Alternanthera philoxeroides*	Black willow Chinese tallow Sweet gum Slender woodoats Sand spikerush Alligator weed
PSS	Palustrine, Scrub-Shrub, Wetland	*Triadica sebifera* *Sagittaria latifolia*	Chinese tallow Broadleaf arrowhead
PUB	Palustrine, Unconsolidated Bottom	Unvegetated natural drainage feature	N/A
PUBx	Palustrine, Unconsolidated Bottom, Excavated	Unvegetated excavated drainage feature	N/A
R2UB	Riverine, Lower Perennial, Unconsolidated Bottom	Unvegetated natural drainage feature	N/A
UPL	Uplands	*Cynodon dactylon* *Stenotaphrum secundatum* *Rubus trivialis* *Nothoscordum bivalve* *Ilex vomitoria* *Pinus taeda* *Triadica sebifera*	Bermudagrass St. Augustine grass Southern dewberry Crowpoison Yaupon holly Loblolly pine Chinese tallow

3.3 Wetland Delineation

During the conduct of the study, in addition to performing observations on the entire survey area, specific attention was focused on areas that were identified during the background investigation as areas of interest (*e.g.*, NWI Wetlands, drainage patterns, photo interpreted wetland signatures, etc.). In each case where potential wetlands were identified, sample plots were evaluated for vegetative, hydrologic, and soils characteristics to aid in delineating habitat boundaries and in determining whether the communities exhibited wetland characteristics. Sample plot locations and mapped wetland and other water areas are depicted in Figure 5 (Appendix A).

Table 4 lists the representative Waters of the U.S. (WOUS) ID, Plot ID, and acreage for the wetlands and other waters identified within the survey area. All features in Table 4 are assumed to be jurisdictional under Section 404 of the Clean Water Act (33 U.S.C. § 1344) or Section 10 of the Rivers and Harbors Act (33 U.S.C. § 403), for the purposes of this project. Jurisdictional estimates are based on physical/topographic attributes of each feature and the surrounding area. These features include the close proximity of the surveyed wetlands to the Neches River and Sabine Lake, as well as the locations of the 100-year floodplain. However, final authority rests with the USACE regarding regulated activities, permitting requirements, and jurisdictional status.

Table 4 –Wetland/WOUS ID Summary

SOIL INFORMATION SURVEY

United States
Department of
Agriculture

Natural
Resources
Conservation
Service

A product of the National Cooperative Soil Survey, a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local participants

Custom Soil Resource Report for Cameron Parish, Louisiana, and Jefferson and Orange Counties, Texas

June 15, 2020

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. Contents

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Cameron Parish, Louisiana
Survey Area Data: Version 17, Sep 11, 2019

Soil Survey Area: Jefferson and Orange Counties, Texas
Survey Area Data: Version 20, Sep 12, 2019

Your area of interest (AOI) includes more than one soil survey area. These survey areas may have been mapped at different scales, with a different land use in mind, at different times, or at different levels of detail. This may result in map unit symbols, soil properties, and interpretations that do not completely agree across soil survey area boundaries.

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jan 1, 1999—Dec 31, 2003

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Cameron Parish, Louisiana

BA—Bancker muck, 0 to 0.2 percent slopes, very frequently flooded

Map Unit Setting

National map unit symbol: 2tpnf
Elevation: 0 feet
Mean annual precipitation: 43 to 68 inches
Mean annual air temperature: 55 to 79 degrees F
Frost-free period: 219 to 365 days
Farmland classification: Not prime farmland

Map Unit Composition

Bancker, very frequently flooded, and similar soils: 82 percent
Minor components: 18 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Bancker, Very Frequently Flooded

Setting

Landform: Marshes
Landform position (three-dimensional): Dip
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Fluid clayey backswamp deposits

Typical profile

Oa - 0 to 10 inches: muck
Cg - 10 to 79 inches: clay

Properties and qualities

Slope: 0 to 0 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Very poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 inches
Frequency of flooding: Very frequent
Frequency of ponding: Frequent
Salinity, maximum in profile: Slightly saline to moderately saline (4.0 to 8.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 30.0
Available water storage in profile: High (about 11.4 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 8w
Hydrologic Soil Group: D
Ecological site: Brackish Fluid Marsh 60-64 PZ (R151XY004LA)
Hydric soil rating: Yes

Minor Components

Clovelly, very frequently flooded

Percent of map unit: 10 percent

Landform: Marshes
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Dip
Down-slope shape: Linear
Across-slope shape: Linear
Ecological site: Brackish Fluid Marsh 60-64 PZ (R151XY004LA)
Hydric soil rating: Yes

Creole, very frequently flooded
Percent of map unit: 8 percent
Landform: Marshes
Landform position (three-dimensional): Dip
Down-slope shape: Linear
Across-slope shape: Linear
Ecological site: Brackish Firm Mineral Marsh 55-64 PZ (R151XY005LA)
Hydric soil rating: Yes

CR—Creole mucky clay

Map Unit Setting

National map unit symbol: 1vvg8
Elevation: 0 feet
Mean annual precipitation: 43 to 61 inches
Mean annual air temperature: 59 to 77 degrees F
Frost-free period: 259 to 313 days
Farmland classification: Not prime farmland

Map Unit Composition

Creole and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Creole

Setting

Landform: Marshes
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Fluid clayey alluvium

Typical profile

H1 - 0 to 17 inches: mucky clay
H2 - 17 to 48 inches: clay
H3 - 48 to 52 inches: sandy loam
H4 - 52 to 96 inches: clay

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Very poorly drained

Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 inches
Frequency of flooding: Frequent
Frequency of ponding: Frequent
Salinity, maximum in profile: Slightly saline to strongly saline (4.0 to 16.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 15.0
Available water storage in profile: Moderate (about 7.8 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 7w
Hydrologic Soil Group: D
Ecological site: Brackish Firm Mineral Marsh 55-64 PZ (R151XY005LA)
Hydric soil rating: Yes

Minor Components

Minor components

Percent of map unit: 15 percent
Hydric soil rating: No

Hb—Hackberry loamy fine sand

Map Unit Setting

National map unit symbol: 1vvgd
Elevation: 0 to 10 feet
Mean annual precipitation: 43 to 61 inches
Mean annual air temperature: 59 to 77 degrees F
Frost-free period: 259 to 313 days
Farmland classification: All areas are prime farmland

Map Unit Composition

Hackberry and similar soils: 90 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Hackberry

Setting

Landform: Beach ridges
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Rise
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Sandy beach sand and/or loamy beach sand

Typical profile

H1 - 0 to 6 inches: loamy fine sand
H2 - 6 to 28 inches: very fine sandy loam

H3 - 28 to 61 inches: loamy fine sand

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Somewhat poorly drained
Capacity of the most limiting layer to transmit water (Ksat): High to very high (6.00 to 20.00 in/hr)
Depth to water table: About 12 to 48 inches
Frequency of flooding: Rare
Frequency of ponding: None
Calcium carbonate, maximum in profile: 25 percent
Salinity, maximum in profile: Very slightly saline to slightly saline (2.0 to 4.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 4.0
Available water storage in profile: Moderate (about 6.4 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3e
Hydrologic Soil Group: A
Ecological site: Sandy Chenier 55-64 PZ (R151XY010LA)
Hydric soil rating: No

Minor Components

Creole

Percent of map unit: 3 percent
Landform: Depressions
Ecological site: Brackish Firm Mineral Marsh 55-64 PZ (R151XY005LA)
Hydric soil rating: Yes

Bancker

Percent of map unit: 3 percent
Landform: Depressions
Ecological site: Brackish Fluid Marsh 60-64 PZ (R151XY004LA)
Hydric soil rating: Yes

Peveto

Percent of map unit: 2 percent
Ecological site: Sandy Chenier 55-64 PZ (R151XY010LA)
Hydric soil rating: No

Mermentau

Percent of map unit: 2 percent
Landform: Depressions
Ecological site: Clayey Chenier Brackish Marsh 55-64 PZ (R151XY006LA)
Hydric soil rating: Yes

Hm—Hackberry-Mermentau complex, gently undulating

Map Unit Setting

National map unit symbol: 1vvgf
Elevation: 0 to 20 feet
Mean annual precipitation: 43 to 61 inches
Mean annual air temperature: 59 to 77 degrees F
Frost-free period: 259 to 313 days
Farmland classification: Not prime farmland

Map Unit Composition

Hackberry and similar soils: 60 percent
Mermentau and similar soils: 30 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Hackberry

Setting

Landform: Beach ridges
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Rise
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Sandy beach sand and/or loamy beach sand

Typical profile

H1 - 0 to 5 inches: fine sandy loam
H2 - 5 to 27 inches: very fine sandy loam
H3 - 27 to 60 inches: loamy fine sand

Properties and qualities

Slope: 1 to 3 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Somewhat poorly drained
Capacity of the most limiting layer to transmit water (Ksat): High to very high (6.00 to 20.00 in/hr)
Depth to water table: About 12 to 48 inches
Frequency of flooding: Rare
Frequency of ponding: None
Calcium carbonate, maximum in profile: 25 percent
Salinity, maximum in profile: Very slightly saline to slightly saline (2.0 to 4.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 4.0
Available water storage in profile: Moderate (about 6.4 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: A

Ecological site: Sandy Chenier 55-64 PZ (R151XY010LA)
Hydric soil rating: No

Description of Mermentau

Setting

Landform: Marshes
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Loamy over clayey backswamp deposits

Typical profile

H1 - 0 to 15 inches: clay
H2 - 15 to 29 inches: silty clay
H3 - 29 to 60 inches: very fine sandy loam

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 to 42 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Salinity, maximum in profile: Slightly saline to strongly saline (4.0 to 16.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 35.0
Available water storage in profile: Moderate (about 6.6 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 7w
Hydrologic Soil Group: D
Ecological site: Clayey Chenier Brackish Marsh 55-64 PZ (R151XY006LA)
Hydric soil rating: Yes

Minor Components

Minor components

Percent of map unit: 10 percent

ME—Mermentau clay

Map Unit Setting

National map unit symbol: 1vvgl
Elevation: 0 to 20 feet
Mean annual precipitation: 43 to 61 inches
Mean annual air temperature: 59 to 77 degrees F

Frost-free period: 259 to 313 days
Farmland classification: Not prime farmland

Map Unit Composition

Mermentau and similar soils: 86 percent
Minor components: 14 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Mermentau

Setting

Landform: Marshes
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Coastal clayey and/or loamy alluvium

Typical profile

H1 - 0 to 19 inches: clay
H2 - 19 to 59 inches: very fine sandy loam
H3 - 59 to 69 inches: sandy clay

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 to 42 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Salinity, maximum in profile: Slightly saline to strongly saline (4.0 to 16.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 35.0
Available water storage in profile: Moderate (about 6.2 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 7w
Hydrologic Soil Group: D
Ecological site: Clayey Chenier Brackish Marsh 55-64 PZ (R151XY006LA)

W—Water

Map Unit Setting

National map unit symbol: 1vvgy
Mean annual precipitation: 43 to 61 inches
Mean annual air temperature: 59 to 77 degrees F
Frost-free period: 259 to 313 days
Farmland classification: Not prime farmland

Map Unit Composition

Water: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Jefferson and Orange Counties, Texas

BaA—Bancker mucky peat, 0 to 1 percent slopes, frequently flooded, tidal

Map Unit Setting

National map unit symbol: dl2s
Elevation: 0 to 10 feet
Mean annual precipitation: 54 to 60 inches
Mean annual air temperature: 70 to 72 degrees F
Frost-free period: 260 to 310 days
Farmland classification: Not prime farmland

Map Unit Composition

Bancker and similar soils: 86 percent
Minor components: 14 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Bancker

Setting

Landform: Marshes
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Fluid clayey backswamp deposits

Typical profile

Oa - 0 to 9 inches: mucky peat
H2 - 9 to 41 inches: clay
H3 - 41 to 80 inches: clay

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Very poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 to 6 inches
Frequency of flooding: Frequent
Frequency of ponding: Frequent
Salinity, maximum in profile: Slightly saline to moderately saline (4.0 to 8.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 36.0
Available water storage in profile: High (about 11.3 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 8w
Hydrologic Soil Group: D
Ecological site: FLUID BRACKISH MARSH (R151XY674TX)

BbA—Barbary mucky clay, 0 to 1 percent slopes, frequently flooded

Map Unit Setting

National map unit symbol: 2qr6p
Elevation: 0 to 50 feet
Mean annual precipitation: 43 to 73 inches
Mean annual air temperature: 55 to 79 degrees F
Frost-free period: 245 to 321 days
Farmland classification: Not prime farmland

Map Unit Composition

Barbary, frequently flooded, and similar soils: 90 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Barbary, Frequently Flooded

Setting

Landform: Flood plains
Landform position (three-dimensional): Dip
Down-slope shape: Concave
Across-slope shape: Concave
Parent material: Fluid clayey alluvium

Typical profile

A - 0 to 14 inches: mucky clay
Cg - 14 to 65 inches: clay

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Very poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): Moderately low (0.01 to 0.06 in/hr)
Depth to water table: About 0 inches
Frequency of flooding: Frequent
Frequency of ponding: Frequent
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water storage in profile: High (about 11.4 inches)

Interpretive groups

Land capability classification (irrigated): None specified

Land capability classification (nonirrigated): 8w
Hydrologic Soil Group: D
Ecological site: Delta Plain - Frequently Flooded Ponded Very Poorly Drained Oxbows And Swales - PROVISIONAL (F131AY501LA)

CamA—Camptown silt loam, 0 to 1 percent slopes, frequently ponded

Map Unit Setting
National map unit symbol: f73z
Elevation: 10 to 100 feet
Mean annual precipitation: 48 to 60 inches
Mean annual air temperature: 67 to 69 degrees F
Frost-free period: 240 to 300 days
Farmland classification: Not prime farmland

Map Unit Composition
Camptown and similar soils: 95 percent
Minor components: 5 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Camptown

Setting
Landform: Meanders
Landform position (three-dimensional): Dip
Microfeatures of landform position: Channels
Down-slope shape: Concave
Across-slope shape: Concave
Parent material: Loamy fluviomarine deposits derived from igneous, metamorphic and sedimentary rock

Typical profile

A - 0 to 4 inches: silt loam
Bg - 4 to 24 inches: silt loam
Btg/E - 24 to 46 inches: silt loam
Btg - 46 to 80 inches: clay loam

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Very poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 inches
Frequency of flooding: None
Frequency of ponding: Frequent
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 25.0
Available water storage in profile: High (about 10.9 inches)

Interpretive groups

Land capability classification (irrigated): 6w
Land capability classification (nonirrigated): 7w
Hydrologic Soil Group: C/D
Ecological site: Poorly Drained Loamy Upland (F152BY007TX)
Hydric soil rating: Yes

Minor Components

Evadale

Percent of map unit: 3 percent
Landform: Flats

Hydric soil rating: Yes

Bevil

Percent of map unit: 2 percent
Landform: Depressions
Landform position (three-dimensional): Dip
Microfeatures of landform position: Gilgai
Down-slope shape: Linear
Across-slope shape: Linear
Ecological site: Clayey Flat (F152BY004TX)
Hydric soil rating: Yes

CsA—Creole mucky peat, 0 to 1 percent slopes, frequently flooded, tidal

Map Unit Setting

National map unit symbol: dl36
Elevation: 0 feet
Mean annual precipitation: 50 to 60 inches
Mean annual air temperature: 70 to 72 degrees F
Frost-free period: 260 to 310 days
Farmland classification: Not prime farmland

Map Unit Composition

Creole and similar soils: 86 percent
Minor components: 14 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Creole

Setting

Landform: Marshes
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Fluid clayey backswamp deposits

Typical profile

H1 - 0 to 7 inches: mucky peat
H2 - 7 to 13 inches: clay
H3 - 13 to 34 inches: clay
H4 - 34 to 58 inches: clay
H5 - 58 to 80 inches: clay

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Very poorly drained
Runoff class: High
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 inches
Frequency of flooding: Frequent
Frequency of ponding: Frequent
Gypsum, maximum in profile: 2 percent
Salinity, maximum in profile: Slightly saline to strongly saline (4.0 to 24.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 25.0
Available water storage in profile: Moderate (about 8.5 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 7w
Hydrologic Soil Group: D

Ecological site: FIRM BRACKISH MARSH (R151XY671TX)
Hydric soil rating: Yes

Minor Components

Unnamed, hydric minor components

Percent of map unit: 14 percent
Landform: Depressions
Hydric soil rating: Yes

HatA—Hatliff-Pluck-Kian complex, 0 to 1 percent slopes, frequently flooded

Map Unit Setting

National map unit symbol: 1vykn
Elevation: 20 to 150 feet
Mean annual precipitation: 48 to 62 inches
Mean annual air temperature: 67 to 68 degrees F
Frost-free period: 240 to 300 days
Farmland classification: Not prime farmland

Map Unit Composition

Hatliff and similar soils: 38 percent
Pluck and similar soils: 35 percent
Kian and similar soils: 24 percent
Minor components: 3 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Hatliff

Setting

Landform: Flood plains
Landform position (three-dimensional): Rise
Microfeatures of landform position: Bars
Down-slope shape: Linear
Across-slope shape: Convex
Parent material: Holocene age clayey alluvium derived from igneous, metamorphic and sedimentary rock

Typical profile

A - 0 to 12 inches: loam
Bw1 - 12 to 38 inches: fine sandy loam
Bw2 - 38 to 62 inches: fine sandy loam
Bg - 62 to 80 inches: fine sandy loam

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Well drained
Runoff class: Negligible

Capacity of the most limiting layer to transmit water (Ksat): High (1.98 to 5.95 in/hr)
Depth to water table: About 44 to 64 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline (0.0 to 0.3 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 2.0
Available water storage in profile: Moderate (about 7.1 inches)

Interpretive groups

Land capability classification (irrigated): 5w
Land capability classification (nonirrigated): 2w
Hydrologic Soil Group: A
Ecological site: Well Drained Bottomland (F152BY012TX)
Hydric soil rating: No

Description of Pluck

Setting

Landform: Flood plains
Landform position (three-dimensional): Dip
Microfeatures of landform position: Channels
Down-slope shape: Concave
Across-slope shape: Concave
Parent material: Loamy alluvium derived from igneous, metamorphic and sedimentary rock

Typical profile

A - 0 to 6 inches: fine sandy loam
Bg1 - 6 to 34 inches: loam
Bg2 - 34 to 60 inches: loam
Bg3 - 60 to 80 inches: loam

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Poorly drained
Runoff class: High
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 3 to 6 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline (0.0 to 0.5 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 2.0
Available water storage in profile: High (about 10.5 inches)

Interpretive groups

Land capability classification (irrigated): 5w
Land capability classification (nonirrigated): 5w
Hydrologic Soil Group: C/D
Ecological site: Poorly Drained Loamy Bottomland (F152BY013TX)
Hydric soil rating: Yes

Description of Kian

Setting

Landform: Flood plains
Landform position (three-dimensional): Dip
Microfeatures of landform position: Channels
Down-slope shape: Linear
Across-slope shape: Concave, linear
Parent material: Loamy alluvium derived from igneous, metamorphic and sedimentary rock

Typical profile

A - 0 to 5 inches: fine sandy loam
Bw - 5 to 26 inches: fine sandy loam
Bg1 - 26 to 55 inches: fine sandy loam
Bg2 - 55 to 80 inches: loamy fine sand

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Poorly drained
Runoff class: High
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 3 to 10 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline (0.0 to 0.5 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 2.0
Available water storage in profile: Moderate (about 7.8 inches)

Interpretive groups

Land capability classification (irrigated): 8e

IjmB—Ijam clay, 0 to 2 percent slopes, frequently flooded, tidal

Map Unit Setting

National map unit symbol: 2thnj
Elevation: 0 to 10 feet
Mean annual precipitation: 50 to 62 inches
Mean annual air temperature: 68 to 72 degrees F
Frost-free period: 270 to 300 days
Farmland classification: Not prime farmland

Map Unit Composition

Ijam and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Ijam

Setting

Landform: Flats
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Clayey dredge spoils derived from igneous, metamorphic and sedimentary rock

Typical profile

A - 0 to 6 inches: clay
Cg1 - 6 to 23 inches: clay
Cg2 - 23 to 65 inches: clay
Cg3 - 65 to 80 inches: clay

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Poorly drained
Runoff class: Very high
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Calcium carbonate, maximum in profile: 10 percent
Salinity, maximum in profile: Slightly saline to strongly saline (4.0 to 16.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 30.0
Available water storage in profile: Moderate (about 6.6 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 7w
Hydrologic Soil Group: D
Ecological site: INTERMEDIATE Firm MARSH (R151XY673TX)
Hydric soil rating: Yes

NuC—Neel-Urban land complex, 2 to 5 percent slopes, rarely flooded, tidal

Map Unit Setting

National map unit symbol: dl41
Elevation: 0 to 10 feet
Mean annual precipitation: 50 to 60 inches
Mean annual air temperature: 70 to 72 degrees F
Frost-free period: 260 to 310 days
Farmland classification: Not prime farmland

Map Unit Composition

Neel and similar soils: 60 percent
Urban land: 25 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Neel

Setting

Microfeatures of landform position: Mounds
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Clayey sediments of the beaumont formation

Typical profile

H1 - 0 to 12 inches: clay
H2 - 12 to 80 inches: clay

Properties and qualities

Slope: 2 to 5 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Moderately well drained
Runoff class: Very high
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 36 to 72 inches
Frequency of flooding: Rare
Frequency of ponding: None
Calcium carbonate, maximum in profile: 10 percent
Salinity, maximum in profile: Very slightly saline to strongly saline (2.0 to 16.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 30.0
Available water storage in profile: Moderate (about 6.6 inches)

Microfeatures of landform position: Bars
Down-slope shape: Linear
Across-slope shape: Convex
Parent material: Loamy fluviomarine deposits derived from igneous, metamorphic and sedimentary rock

Typical profile

A - 0 to 4 inches: loam

E - 4 to 9 inches: loam
Bt/E - 9 to 12 inches: loam
Bt - 12 to 40 inches: clay
Btg - 40 to 80 inches: clay

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Somewhat poorly drained
Runoff class: Very high
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 25 to 66 inches
Frequency of flooding: Rare
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 12.0
Available water storage in profile: High (about 9.4 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: D
Ecological site: Northern Loamy Prairie (R150AY741TX)
Hydric soil rating: No

Description of Anahuac

Setting

Landform: Point bars
Landform position (three-dimensional): Rise
Down-slope shape: Linear
Across-slope shape: Convex
Parent material: Loamy fluviomarine deposits derived from igneous, metamorphic and sedimentary rock

Typical profile

A - 0 to 15 inches: loam
E - 15 to 28 inches: loam
Bt/E - 28 to 34 inches: loam
Bt - 34 to 53 inches: clay
Btg - 53 to 80 inches: clay

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Moderately well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 41 to 64 inches
Frequency of flooding: Rare
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 13.0

Available water storage in profile: High (about 9.1 inches)

Soil Information for All Uses

Soil Reports

The Soil Reports section includes various formatted tabular and narrative reports (tables) containing data for each selected soil map unit and each component of each unit. No aggregation of data has occurred as is done in reports in the Soil Properties and Qualities and Suitabilities and Limitations sections.

The reports contain soil interpretive information as well as basic soil properties and qualities. A description of each report (table) is included.

AOI Inventory

This folder contains a collection of tabular reports that present a variety of soil information. Included are various map unit description reports, special soil interpretation reports, and data summary reports.

Map Unit Description (Brief)

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the selected area. The component descriptions in this report, along with the maps, can be used to determine the composition and properties of a unit. A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the associated soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas (components) for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

The "Map Unit Description (Brief)" report gives a brief, general description of the soil components that occur in a map unit. Descriptions of nonsoil (miscellaneous areas) and minor map unit components may or may not be included. This description is written by the local soil scientists responsible for the respective soil survey area data. A more detailed description can be generated by the "Map Unit Description" report.

Additional information about the map units described in this report is available in other Soil Data Mart reports, which give properties of the soils and the limitations, capabilities, and potentials for many uses. Also, the narratives that accompany the Soil Data Mart reports define some of the properties included in the map unit descriptions.

Report—Map Unit Description (Brief)

Cameron Parish, Louisiana

Map Unit: CR—Creole mucky clay

Description Category: AGR

This soil is unsuited for cropland or pastureland.

Description Category: SOI

This very poorly drained, fluid, mineral soil is in brackish marshes. It is flooded or ponded most of the time. The soil has a fluid mucky surface layer and a fluid clayey underlying material. It has low strength and poor trafficability. The total subsidence potential is medium.

Map Unit: Hb—Hackberry loamy fine sand

Description Category: AGR

The potential for cropland and pastureland is excellent. Suitable crops are cotton, soybeans, corn, and grain sorghum. Pasture plants are bermudagrasses, bahiagrass, ryegrass tall fescue, and white clover. Traffic pans develop easily, but can be broken by chiseling or deep plowing. A drainage system is generally needed to remove excess surface water. Crop residue management will reduce erosion. Most crops respond well to nitrogen fertilizers. Lime and other fertilizers generally are not needed.

Description Category: RNG

RANGE SITE 10

Description Category: SOI

This level, somewhat poorly drained, sandy soil is on the toe slopes of low ridges along the Gulf of Mexico. The soil is subject to rare flooding. The surface layer is sandy and the subsoil is loamy and sandy. The soil is very slightly saline. Permeability is moderate. A seasonal high water table limits rooting depth of plants.

Map Unit: Hm—Hackberry-Mermentau complex, gently undulating

Description Category: AGR

The potential for cropland and pastureland is excellent. Suitable crops are cotton, soybeans, corn, and grain sorghum. Pasture plants are bermudagrasses, bahiagrass, ryegrass tall fescue, and white clover. Traffic pans develop easily, but can be broken by chiseling or deep plowing. A drainage system is generally needed to remove excess surface water. Crop residue management will reduce erosion. Most crops respond well to nitrogen fertilizers. Lime and other fertilizers generally are not needed.

Description Category: RNG

RANGE SITE 6

Description Category: RNG

RANGE SITE 10

Description Category: SOI

These soils are level and gently undulating, somewhat poorly drained and poorly drained. They are in a ridge and swale landscape near the coast of the Gulf of Mexico. The Hackberry soil is on low ridges. The Mermentau soil is in low areas between the ridges. Low areas are subject to frequent flooding. The Hackberry soil has a loamy surface layer and subsoil. The underlying material is sandy. The Mermentau soil has a firm, clayey surface layer and subsoil.

Map Unit: ME—Mermentau clay

Description Category: RNG

RANGE SITE 6

Description Category: SOI

This level, poorly drained soil is on low ridges within areas of brackish marsh near the Gulf of Mexico. It is subject to frequent, shallow flooding by high tides. The soil has a firm, clayey surface layer and subsoil. The underlying material is loamy and fliud. Natural fertility is high. The soil is moderately saline or strongly saline. Permeability is very slow. A seasonal high water table is within 3.5 feet of the surface throughout the year.

Jefferson and Orange Counties, Texas

Map Unit: BaA—Bancker mucky peat, 0 to 1 percent slopes, frequently flooded, tidal

Description Category: RNG

Fluid Brackish Marsh - Soils high in organic matter occurring along relic or present major rivers and bayous in the marsh. These very deep saline soils are saturated throughout the year and are too soft for livestock grazing. Climax vegetation includes marshhay cordgrass, seashore saltgrass, saltmarsh bulrush, marsh hemp, aster, and widgeongrass.

Map Unit: CamA—Camptown silt loam, 0 to 1 percent slopes, frequently ponded

Description Category: PHG

7E - DEPRESSED UPLAND - Deep and very deep, clayey and tight loamy uplands occurring in depressions; very poorly drained, tight subsoils; high natural fertility; Very high to high water holding capacity but poor to fair plant-soil-moisture relationship; low to high production potential depending on wetness and inundation.

Description Category: WSG

0w0 - These soils do not have potential production for woodland management. They are ponded for long periods of time. Although bald cypress maybe found around the edges, these soils will not support a commercial stand of trees. Only water loving species such as sedges and buttonbush will grow. They have a low potential for wildlife and livestock use.

Map Unit: CsA—Creole mucky peat, 0 to 1 percent slopes, frequently flooded, tidal

Description Category: RNG

Firm Brackish Marsh - Soils high in organic matter occurring as level coastal marshes from 0 to 4 feet above sea level. These very deep saline soils are saturated most of the year and can be grazed by livestock. Climax vegetation includes marshhay cordgrass, seashore saltgrass, saltmarsh bulrush and needlegrass.

Map Unit: HatA—Hatliff-Pluck-Kian complex, 0 to 1 percent slopes, frequently flooded

Description Category: PHG

2B - LOAMY ACIDIC BOTTOMLAND - Deep and very deep, strongly to very strongly acid bottomlands with loamy surfaces; may overflow; medium natural fertility; moderate to very high water holding capacity with good plant-soil-moisture relationship; high production potential.

Description Category: PHG

2C - WET LOAMY BOTTOMLAND - Deep and very deep, wet, somewhat poorly to very poorly drained, loamy bottomlands with seasonal high water tables; may overflow; medium natural fertility; high to very high water holding capacity but poor plant-soil-moisture relationship; medium production potential.

Description Category: WSG

2w8 - Seasonal wetness may cause moderate equipment limitations and plant competition. Important commercial tree species include loblolly pine, shortleaf pine, sweetgum, and red oak. These soils are suited for pine and hardwoods, and the site index for loblolly pine and sweetgum is 90. The yield from an unmanaged stand over a 50-year period is approximately 330 board feet (Doyle rule) for loblolly pine, or 210 for sweetgum per acre per year. Native species important to wildlife include water oak, red oak, yaupon, American beautyberry, and Alabama supplejack. High value grasses and forbs used by livestock include pinehill bluestem, longleaf uniola, virginia wildrye, switchgrass, and beaked panicum. Stocking rates depend on canopy density and range from 6-60 acres per animal unit.

Description Category: WSG

2w6 - Clayey texture and seasonal wetness will cause severe equipment limitations and seedling mortality. Important commercial trees include willow oak, water oak, green ash, and sweetgum. These soils are suited for hardwoods, and the site index for water oak and sweetgum is 90. The yield from unmanaged stand of water oak over a 50-year period is approximately 236 board feet (Doyle rule) per acre per year. Native species important to wildlife include water oak, willow oak, green ash, and blackgum. Grasses and forbs important for livestock include switchgrass, beaked panicum, switch cane, wildrye and sedges. Stocking rates depend on canopy density and range from 6-50 acres per animal unit.

Map Unit: IjmB—Ijam clay, 0 to 2 percent slopes, frequently flooded, tidal

Description Category: PHG

1B - WET CLAYEY BOTTOMLAND - Deep and very deep, wet, very poorly to poorly drained, clayey bottomlands; some areas may be ponded; may overflow; high natural fertility; very high to high water holding capacity but poor plant-soil-moisture relationship; medium production potential.

Description Category: RNG

Firm Intermediate Marsh - Soils high in organic matter occurring along level coastal marshland from 1 to 4 feet above sea level. These very deep saline soils are saturated most of the year and can be grazed by livestock. Climax vegetation includes marshhay cordgrass with lesser amounts of California bulrush, olney bulrush, softstem bulrush and seashore paspalum. Spikesedges, seedbox, Colorado river hemp, and cattails are also found in smaller amounts.

Map Unit: NuC—Neel-Urban land complex, 2 to 5 percent slopes, rarely flooded, tidal

Description Category: PHG

1A - HEAVY CLAYEY BOTTOMLAND - Deep and very deep, somewhat poorly to well drained, heavy bottomlands; may overflow; high natural fertility; seasonally wet or droughty; very high to high water holding capacity but fair plant-soil-moisture relationship; high production potential.

Description Category: RNG

Salty Prairie - These very deep gray to dark gray clayey and loamy soils occur as broad, nearly level, coastal flats and are frequently inundated by sea water from high tides and gulf storms. Climax vegetation includes by gulf cordgrass, switchgrass, indiangrass, little bluestem, knotroot bristlegrass, and shoregrass.

Map Unit: OrdB—Orcadia silt loam, 0 to 2 percent slopes, rarely flooded

Description Category: PHG

8E1 - SLIGHTLY WET UPLAND - Deep and very deep, loamy uplands; wet during cool seasons; somewhat poorly drained; mainly tight subsoils; medium natural fertility; Very high to high water holding capacity with fair to good plant-soil-moisture relationship; medium to high production potential.

Description Category: RNG

Loamy Prairie 44-56" PZ - Deep, loamy soils on nearly level coastal plains; occasionally moundy. Climax vegetation is a treeless, tall grass prairie including native bluestem, indiangrass, switchgrass, eastern gamagrass, paspalum, low panicums, crinkleawn, bundleflower, mimosa, sensitivebrier, neptunia, gayfeather, indianplantain, and coneflower.

Description Category: WSG

2w8 - Seasonal wetness may cause moderate equipment limitations and plant competition. Important commercial tree species include loblolly pine, shortleaf pine, sweetgum, and red oak. These soils are suited for pine and hardwoods, and the site index for loblolly pine and sweetgum is 90. The yield from an unmanaged stand over a 50-year period is approximately 330 board feet (Doyle rule) for loblolly pine, or 210 for sweetgum per acre per year. Native species important to wildlife include water oak, red oak, yaupon, American beautyberry, and Alabama supplejack. High value grasses and forbs used by livestock include pinehill bluestem, longleaf uniola, virginia wildrye, switchgrass, and beaked panicum. Stocking rates depend on canopy density and range from 6-60 acres per animal unit.

Map Unit: OriA—Orcadia-Anahuac complex, 0 to 1 percent slopes

Description Category: PHG

8C - LOAMY UPLAND - Moderately deep to very deep uplands with loamy surfaces and friable loamy subsoils; slopes 0 to 8 percent; medium natural fertility; medium to high water holding capacity with good plant-soil-moisture relationship; medium to high production potential.

Description Category: PHG

8E1 - SLIGHTLY WET UPLAND - Deep and very deep, loamy uplands; wet during cool seasons; somewhat poorly drained; mainly tight subsoils; medium natural fertility; Very high to high water holding capacity with fair to good plant-soil-moisture relationship; medium to high production potential.

Description Category: RNG

Loamy Prairie 44-56" PZ - Deep, loamy soils on nearly level coastal plains; occasionally moundy. Climax vegetation is a treeless, tall grass prairie including native bluestem, indiangrass, switchgrass, eastern gamagrass, paspalum, low panicums, crinkleawn, bundleflower, mimosa, sensitivebrier, neptunia, gayfeather, indianplantain, and coneflower.

Climax vegetation is a treeless, tall grass prairie including native bluestem, indiangrass, switchgrass, eastern gamagrass, paspalum, low panicums, crinkleawn, bundleflower, mimosa, sensitivebrier, neptunia, gayfeather, indianplantain, and coneflower.

Description Category: WSG

2w8 - Seasonal wetness may cause moderate equipment limitations and plant competition. Important commercial tree species include loblolly pine, shortleaf pine, sweetgum, and red oak. These soils are suited for pine and hardwoods, and the site index for loblolly pine and sweetgum is 90. The yield from an unmanaged stand over a 50-year period is approximately 330 board feet (Doyle rule) for loblolly pine, or 210 for sweetgum per acre per year. Native species important to wildlife include water oak, red oak, yaupon, American beautyberry, and Alabama supplejack. High value grasses and forbs used by livestock include pinehill bluestem, longleaf uniola, virginia wildrye, switchgrass, and beaked panicum. Stocking rates depend on canopy density and range from 6-60 acres per animal unit.

Map Unit: OsdA—Orcadia-Aris complex, 0 to 1 percent slopes, rarely flooded

Description Category: PHG

8E1 - SLIGHTLY WET UPLAND - Deep and very deep, loamy uplands; wet during cool seasons; somewhat poorly drained; mainly tight subsoils; medium natural fertility; Very high to high water holding capacity with fair to good plant-soil-moisture relationship; medium to high production potential.

Description Category: RNG

Lowland 35-56" PZ - Deep, acid soils in low flats, poorly drained. Indigenously, a wet prairie including eastern gamagrass, maidencane, switchgrass, longtom, sedges and rushes, snakeroot, smartweed, camphorweed, coneflower, and sunflower. Sesbania, waxmyrtle, baccharis, chinese tallow, vaseygrass, smutgrass, and carpetgrass are invaders.

Description Category: RNG

Loamy Prairie 44-56" PZ - Deep, loamy soils on nearly level coastal plains; occasionally moundy. Climax vegetation is a treeless, tall grass prairie including native bluestem, indiangrass, switchgrass, eastern gamagrass, paspalum, low panicums, crinkleawn, bundleflower, mimosa, sensitivebrier, neptunia, gayfeather, indianplantain, and coneflower.

Map Unit: OsuB—Orcadia-Urban land complex, 0 to 2 percent slopes

Description Category: PHG

8E1 - SLIGHTLY WET UPLAND - Deep and very deep, loamy uplands; wet during cool seasons; somewhat poorly drained; mainly tight subsoils; medium natural fertility; Very high to high water holding capacity with fair to good plant-soil-moisture relationship; medium to high production potential.

Description Category: RNG

Loamy Prairie 44-56" PZ - Deep, loamy soils on nearly level coastal plains; occasionally moundy. Climax vegetation is a treeless, tall grass prairie including native bluestem, indiangrass, switchgrass, eastern gamagrass, paspalum, low panicums, crinkleawn, bundleflower, mimosa, sensitivebrier, neptunia, gayfeather, indianplantain, and coneflower.

Description Category: WSG

2w8 - Seasonal wetness may cause moderate equipment limitations and plant competition. Important commercial tree species include loblolly pine, shortleaf pine, sweetgum, and red oak. These soils are suited for pine and hardwoods, and the site index for loblolly pine and sweetgum is 90. The yield from an unmanaged stand over a 50-year period is approximately 330 board feet (Doyle rule) for loblolly pine, or 210 for sweetgum per acre per year. Native species important to wildlife include water oak, red oak, yaupon, American beautyberry, and Alabama supplejack. High value grasses and forbs used by livestock include pinehill bluestem, longleaf uniola, virginia wildrye, switchgrass, and beaked panicum. Stocking rates depend on canopy density and range from 6-60 acres per animal unit.

Map Unit: ZumA—Zummo muck, 0 to 1 percent slopes, frequently flooded, frequently ponded

Description Category: RNG

Firm Fresh Marsh - Soils high in organic matter occurring as potholes, swales, and other areas with little or no surface drainage. These very deep soils are saturated most of the year and can be grazed by livestock. Climax vegetation includes Jamaica sawgrass, giant cutgrass, American lotus, maidencane, cattails, California bulrush, swithchgrass and common reed.

Land Classifications

This folder contains a collection of tabular reports that present a variety of soil groupings. The reports (tables) include all selected map units and components for each map unit. Land classifications are specified land use and management groupings that are assigned to soil areas because combinations of soil have similar behavior for specified practices. Most are based on soil properties and other factors that directly influence the specific use of the soil. Example classifications include ecological site classification, farmland classification, irrigated and nonirrigated land capability classification, and hydric rating.

Hydric Soil List - All Components

This table lists the map unit components and their hydric status in the survey area. This list can help in planning land uses; however, onsite investigation is recommended to determine the hydric soils on a specific site (National Research Council, 1995; Hurt and others, 2002).

The three essential characteristics of wetlands are hydrophytic vegetation, hydric soils, and wetland hydrology (Cowardin and others, 1979; U.S. Army Corps of Engineers, 1987; National Research Council, 1995; Tiner, 1985). Criteria for all of the characteristics must be met for areas to be identified as wetlands. Undrained hydric soils that have natural vegetation should support a dominant population of ecological wetland plant species. Hydric soils that have been converted to other uses should be capable of being restored to wetlands.

Hydric soils are defined by the National Technical Committee for Hydric Soils (NTCHS) as soils that formed under conditions of saturation, flooding, or ponding long enough during the growing season to develop anaerobic conditions in the upper part (Federal Register, 1994). These soils, under natural conditions, are either saturated or inundated long enough during the growing season to support the growth and reproduction of hydrophytic vegetation.

The NTCHS definition identifies general soil properties that are associated with wetness. In order to determine whether a specific soil is a hydric soil or nonhydric soil, however, more specific information, such as information about the depth and duration of the water table, is needed. Thus, criteria that identify those estimated soil properties unique to hydric soils have been established (Federal Register, 2002). These criteria are used to identify map unit components that normally are associated with wetlands. The criteria used are selected estimated soil properties that are described in "Soil Taxonomy" (Soil Survey Staff, 1999) and "Keys to Soil Taxonomy" (Soil Survey Staff, 2006) and in the "Soil Survey Manual" (Soil Survey Division Staff, 1993).

If soils are wet enough for a long enough period of time to be considered hydric, they should exhibit certain properties that can be easily observed in the field. These visible properties are indicators of hydric soils. The indicators used to make onsite determinations of hydric soils are specified in "Field Indicators of Hydric Soils in the United States" (Hurt and Vasilas, 2006).

Hydric soils are identified by examining and describing the soil to a depth of about 20 inches. This depth may be greater if determination of an appropriate indicator so requires. It is always recommended that soils be excavated and described to the depth necessary for an understanding of the redoximorphic processes. Then, using the completed soil descriptions, soil scientists can compare the soil features required by each indicator and specify which indicators have been matched with the conditions observed in the soil. The soil can be identified as a hydric soil if at least one of the approved indicators is present.

Map units that are dominantly made up of hydric soils may have small areas, or inclusions, of nonhydric soils in the higher positions on the landform, and map units dominantly made up of nonhydric soils may have inclusions of hydric soils in the lower positions on the landform.

The criteria for hydric soils are represented by codes in the table (for example, 2). Definitions for the codes are as follows:

1. All Histels except for Folistels, and Histosols except for Folists.
2. Soils in Aquic suborders, great groups, or subgroups, Albolls suborder, Historthels great group, Histoturbels great group, Pachic subgroups, or Cumulic subgroups that:
    A. Based on the range of characteristics for the soil series, will at least in part meet one or more Field Indicators of Hydric Soils in the United States, or
    B. Show evidence that the soil meets the definition of a hydric soil;
3. Soils that are frequently ponded for long or very long duration during the growing season.
    A. Based on the range of characteristics for the soil series, will at least in part meet one or more Field Indicators of Hydric Soils in the United States, or
    B. Show evidence that the soil meets the definition of a hydric soil;
4. Map unit components that are frequently flooded for long duration or very long duration during the growing season that:
    A. Based on the range of characteristics for the soil series, will at least in part meet one or more Field Indicators of Hydric Soils in the United States, or
    B. Show evidence that the soil meets the definition of a hydric soil;

Hydric Condition: Food Security Act information regarding the ability to grow a commodity crop without removing woody vegetation or manipulating hydrology.

Hydric Soils

This table lists the map unit components that are rated as hydric soils in the survey area. This list can help in planning land uses; however, onsite investigation is recommended to determine the hydric soils on a specific site (National Research Council, 1995; Hurt and others, 2002).

The three essential characteristics of wetlands are hydrophytic vegetation, hydric soils, and wetland hydrology (Cowardin and others, 1979; U.S. Army Corps of Engineers, 1987; National Research Council, 1995; Tiner, 1985). Criteria for all of the characteristics must be met for areas to be identified as wetlands. Undrained hydric soils that have natural vegetation should support a dominant population of ecological wetland plant species. Hydric soils that have been converted to other uses should be capable of being restored to wetlands.

Hydric soils are defined by the National Technical Committee for Hydric Soils (NTCHS) as soils that formed under conditions of saturation, flooding, or ponding long enough during the growing season to develop anaerobic conditions in the upper part (Federal Register, 1994). These soils, under natural conditions, are either saturated or inundated long enough during the growing season to support the growth and reproduction of hydrophytic vegetation.

The NTCHS definition identifies general soil properties that are associated with wetness. In order to determine whether a specific soil is a hydric soil or nonhydric soil, however, more specific information, such as information about the depth and duration of the water table, is needed. Thus, criteria that identify those estimated soil properties unique to hydric soils have been established (Federal Register, 2002). These criteria are used to identify map unit components that normally are associated with wetlands. The criteria used are selected estimated soil properties that are described in "Soil Taxonomy" (Soil Survey Staff, 1999) and "Keys to Soil Taxonomy" (Soil Survey Staff, 2006) and in the "Soil Survey Manual" (Soil Survey Division Staff, 1993).

If soils are wet enough for a long enough period of time to be considered hydric, they should exhibit certain properties that can be easily observed in the field. These visible properties are indicators of hydric soils. The indicators used to make onsite determinations of hydric soils are specified in "Field Indicators of Hydric Soils in the United States" (Hurt and Vasilas, 2006).

Hydric soils are identified by examining and describing the soil to a depth of about 20 inches. This depth may be greater if determination of an appropriate indicator so requires. It is always recommended that soils be excavated and described to the depth necessary for an understanding of the redoximorphic processes. Then, using the completed soil descriptions, soil scientists can compare the soil features required by each indicator and specify which indicators have been matched with the conditions observed in the soil. The soil can be identified as a hydric soil if at least one of the approved indicators is present.

Map units that are dominantly made up of hydric soils may have small areas, or inclusions, of nonhydric soils in the higher positions on the landform, and map units dominantly made up of nonhydric soils may have inclusions of hydric soils in the lower positions on the landform.

The criteria for hydric soils are represented by codes in the table (for example, 2). Definitions for the codes are as follows:

1. All Histels except for Folistels, and Histosols except for Folists.
2. Soils in Aquic suborders, great groups, or subgroups, Albolls suborder, Historthels great group, Histoturbels great group, Pachic subgroups, or Cumulic subgroups that:
    A. Based on the range of characteristics for the soil series, will at least in part meet one or more Field Indicators of Hydric Soils in the United States, or
    B. Show evidence that the soil meets the definition of a hydric soil;
3. Soils that are frequently ponded for long or very long duration during the growing season.
    A. Based on the range of characteristics for the soil series, will at least in part meet one or more Field Indicators of Hydric Soils in the United States, or
    B. Show evidence that the soil meets the definition of a hydric soil;

4. Map unit components that are frequently flooded for long duration or very long duration during the growing season that:
    - A. Based on the range of characteristics for the soil series, will at least in part meet one or more Field Indicators of Hydric Soils in the United States, or
    - B. Show evidence that the soil meets the definition of a hydric soil;

Hydric Condition: Food Security Act information regarding the ability to grow a commodity crop without removing woody vegetation or manipulating hydrology.

APPENDIX C

ROUTINE WETLAND DETERMINATION FORMS

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/3/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 001
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.014591
Long: -93.996249
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Ijam clay, 0 to 2 percent slopes, frequently flooded, tidal
NWI Classification: R1UBV

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present?	☑ Yes ☐ No	Is the Sampled Area within the Wetland?	Yes: ☑
Hydric Soils Present?	☑ Yes ☐ No		No: ☐
Wetland Hydrology Present?	☑ Yes ☐ No		

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland. Plot located on beach adjacent to river. High water table through sand.

Habitat ID: H-002
Habitat Type: PEM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☑ High Water Table (A2)
- ☑ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☑ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	☐ Yes ☑ No	Depth (Inches): 0
Water Table Present?	☑ Yes ☐ No	Depth (Inches): 8
Saturation Present? (includes capillary fringe)	☑ Yes ☐ No	Depth (Inches): 0

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Four primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 001

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant Species Across All Strata: 1 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	100	x 1 =	100
FACW Species	0	x 2 =	0
FAC Species	0	x 3 =	0
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	100 (B)

Prevalence Index = B/A = 1.00

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%
Yes Prevalence Index is ≤3.0[1]
No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 001

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-3	10 YR 4/2	100					Coarse sand	
3-16	10 YR 4/1	90	7.5 YR 4/6	10	C	M	Sand	

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

☐ Histosol (A1)
☐ Histic Epipedon (A2)
☐ Black Histic (A3)
☐ Hydrogen Sulfide (A4)
☐ Stratified Layers (A5)
☐ Organic Bodies (A6) (LRR P, T, U)
☐ 5 cm Mucky Mineral (A7) (LRR P, T, U)
☐ Mucky Presence (A8) (LRR P, T, U)
☐ 1 cm Muck (A9) (LLR P, T)
☐ Depleted Below Dark Surface (A11)
☐ Thick Dark Surface (A12)
☐ Coast Prairie Redox (A16) (MLRA 150A)
☐ Sandy Mucky Mineral (S1) (LRR O, S)
☐ Sandy Gleyed Matrix (S4)
☐ Sandy Redox (S5)
☐ Stripped Matrix (S6)
☐ Dark Surface (S7) (LRR P, S, T, U)

☐ Polyvalue Below Surface (S8) (LRR S,T,
☐ Thin Dark Surface (S9) (LRR S, T, U)
☐ Loamy Mucky Mineral (F1) (LRR O)
☐ Loamy Gleyed Matrix (F2)
☑ Depleted Matrix (F3)
☐ Redox Dark Surface (F6)
☐ Depleted Dark Surface (F7)
☐ Redox Depressions (F8)
☐ Marl (F10) (LRR U)
☐ Depleted Ochric (F11) (MLRA 151)
☐ Iron-Manganese Masses (F12) (LRR O, P, T)
☐ Umbric Surface (F13) (LRR P, T, U)
☐ Delta Ochric (F17) (MLRA 151)
☐ Reduced Vertic (F18) (MLRA 150A, 150B)
☐ Piedmont Floodplain Soils (F19) (MLRA 149A)
☐ Anomalous Bright Loamy Soils (F20) (MLRA 149A, 153C, 153D)

Indicators for Problematic Hydric Soils[3]:

☐ 1 cm Muck (A9) (LRR O)
☐ 2 cm Muck (A10) (LRR S)
☐ Reduced Vertic (F18) (outside MLRA 150A,
☐ Piedmont Floodplain Soils (F19) (LRR P, S, T)
☐ Anomalous Bright Loamy Soils (F20)
(MLRA 153B)
☐ Red Parent Material (TF2)
☐ Very Shallow Dark Surface (TF12) (LLR T, U)
☐ Other (Explain in Remarks)

[3] Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Depth (inches):

Hydric Soil Present? Yes ☑ No ☐

Remarks:
The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/3/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 002
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Convex
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.014617
Long: -93.996257
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Ijam clay, 0 to 2 percent slopes, frequently flooded, tidal
NWI Classification: R1UBV

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☐ Yes ☑ No
Wetland Hydrology Present? ☑ Yes ☐ No

Is the Sampled Area within the Wetland? Yes: ☐ No: ☑

Remarks:
Hydrophytic vegetation and hydrology were observed; however, hydric soils were not. The sample plot is not within a wetland. Plot located on well-drained upland shelf. Wrack line present.

Habitat ID:
Habitat Type: Upland

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation
- ☐ Water Marks (B1)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present?	☑ Yes ☐ No	Is the Sampled Area within the Wetland?	Yes: ☐
Hydric Soils Present?	☐ Yes ☑ No		No: ☑
Wetland Hydrology Present?	☐ Yes ☑ No		

Remarks:
Hydrophytic vegetation was observed; however, hydrology and hydric soils were not. The sample plot is not within a wetland.

Habitat ID:
Habitat Type: Upland

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	☐ Yes ☑ No	Depth (Inches): 0
Water Table Present?	☐ Yes ☑ No	Depth (Inches): >16
Saturation Present? (includes capillary fringe)	☐ Yes ☑ No	Depth (Inches): >16

Wetland Hydrology Present?: Yes ☐ No ☑

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
No indicators of hydrology were present. The hydrology parameter is not met.

Vegetation - Use scientific names of plants.

Sampling Point: 004

Tree stratum (Plot size : 30)	Absolute % Cover	Dominant Species?	Indicator Status
1. *Triadica sebifera*	40	Yes	FAC

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 3 (A)

Total Number of Dominant Species Across All Strata: 3 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	20	x 2 =	40
FAC Species	70	x 3 =	210
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	90	(A)	250 (B)

Prevalence Index = B/A = 2.78

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 004

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 2/1	70	7.5YR 4/6	30	C	M	Loamy Clay	

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

☐ Histosol (A1)
☐ Histic Epipedon (A2)
☐ Black Histic (A3)
☐ Hydrogen Sulfide (A4)
☐ Stratified Layers (A5)
☐ Organic Bodies (A6) (LRR P, T, U)
☐ 5 cm Mucky Mineral (A7) (LRR P, T, U)
☐ Mucky Presence (A8) (LRR P, T, U)
☐ 1 cm Muck (A9) (LLR P, T)
☐ Depleted Below Dark Surface (A11)
☐ Thick Dark Surface (A12)
☐ Coast Prairie Redox (A16) (MLRA 150A)
☐ Sandy Mucky Mineral (S1) (LRR O, S)
☐ Sandy Gleyed Matrix (S4)
☐ Sandy Redox (S5)
☐ Stripped Matrix (S6)
☐ Dark Surface (S7) (LRR P, S, T, U)
☐ Polyvalue Below Surface (S8) (LRR S,T,
☐ Thin Dark Surface (S9) (LRR S, T, U)
☐ Loamy Mucky Mineral (F1) (LRR O)
☐ Loamy Gleyed Matrix (F2)
☐ Depleted Matrix (F3)
☐ Redox Dark Surface (F6)
☐ Depleted Dark Surface (F7)
☐ Redox Depressions (F8)
☐ Marl (F10) (LRR U)
☐ Depleted Ochric (F11) (MLRA 151)
☐ Iron-Manganese Masses (F12) (LRR O, P, T)
☐ Umbric Surface (F13) (LRR P, T, U)
☐ Delta Ochric (F17) (MLRA 151)
☐ Reduced Vertic (F18) (MLRA 150A, 150B)
☐ Piedmont Floodplain Soils (F19) (MLRA 149A)
☐ Anomalous Bright Loamy Soils (F20) (MLRA 149A, 153C, 153D)

Indicators for Problematic Hydric Soils[3]:

☐ 1 cm Muck (A9) (LRR O)
☐ 2 cm Muck (A10) (LRR S)
☐ Reduced Vertic (F18) (outside MLRA 150A,
☐ Piedmont Floodplain Soils (F19) (LRR P, S, T)
☐ Anomalous Bright Loamy Soils (F20)
(MLRA 153B)
☐ Red Parent Material (TF2)
☐ Very Shallow Dark Surface (TF12) (LLR T, U)
☐ Other (Explain in Remarks)

[3] Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Depth (inches):

Hydric Soil Present? Yes ☐ No ☑

Remarks:

The soils parameter is not met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/3/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 005
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Convex
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.015417
Long: -93.996466
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Ijam clay, 0 to 2 percent slopes, frequently flooded, tidal
NWI Classification: PSS1A

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☑ Yes ☐ No
Wetland Hydrology Present? ☐ Yes ☑ No

Is the Sampled Area within the Wetland? Yes: ☐ No: ☑

Remarks:
Hydrophytic vegetation and hydric soils were observed; however, hydrology was not. The sample plot is not within a wetland.

Habitat ID:
Habitat Type: Upland

(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No Hydric Soils Present? ☑ Yes ☐ No Wetland Hydrology Present? ☐ Yes ☑ No	Is the Sampled Area within the Wetland? Yes: ☐ No: ☑

Remarks:
Hydrophytic vegetation and hydric soils were observed; however, hydrology was not. The sample plot is not within a wetland.

Habitat ID:
Habitat Type: Upland

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☐ Yes ☑ No Depth (Inches): 0
Water Table Present? ☐ Yes ☑ No Depth (Inches): >16
Saturation Present? ☐ Yes ☑ No Depth (Inches): >16
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☐ No ☑

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
No indicators of hydrology were present. The hydrology parameter is not met.

Vegetation - Use scientific names of plants.

Sampling Point: 007

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant Species Across All Strata: 2 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 50% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	40	x 2 =	80
FAC Species	0	x 3 =	0
FACU Species	60	x 4 =	240
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	320 (B)

Prevalence Index = B/A = 3.20

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

No Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 007

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 3/1	80	7.5 YR 4/6	10	C	M	Clay

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains.

[2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ Organic Bodies (A6) (LRR P, T, U)
- ☐ 5 cm Mucky Mineral (A7) (LRR P, T, U)
- ☐ Mucky Presence (A8) (LRR P, T, U)
- ☐ 1 cm Muck (A9) (LLR P, T)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Coast Prairie Redox (A16) (MLRA 150A)
- ☐ Sandy Mucky Mineral (S1) (LRR O, S)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)
- ☐ Dark Surface (S7) (LRR P, S, T, U)
- ☐ Polyvalue Below Surface (S8) (LRR S,T,
- ☐ Thin Dark Surface (S9) (LRR S, T, U)
- ☐ Loamy Mucky Mineral (F1) (LRR O)
- ☐ Loamy Gleyed Matrix (F2)
- ☐ Depleted Matrix (F3)
- ☑ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Marl (F10) (LRR U)
- ☐ Depleted Ochric (F11) (MLRA 151)
- ☐ Iron-Manganese Masses (F12) (LRR O, P, T)
- ☐ Umbric Surface (F13) (LRR P, T, U)
- ☐ Delta Ochric (F17) (MLRA 151)
- ☐ Reduced Vertic (F18) (MLRA 150A, 150B)
- ☐ Piedmont Floodplain Soils (F19) (MLRA 149A)
- ☐ Anomalous Bright Loamy Soils (F20) (MLRA 149A, 153C, 153D)

Indicators for Problematic Hydric Soils[3]:

- ☐ 1 cm Muck (A9) (LRR O)
- ☐ 2 cm Muck (A10) (LRR S)
- ☐ Reduced Vertic (F18) (outside MLRA 150A,
- ☐ Piedmont Floodplain Soils (F19) (LRR P, S, T)
- ☐ Anomalous Bright Loamy Soils (F20)

(MLRA 153B)

- ☐ Red Parent Material (TF2)
- ☐ Very Shallow Dark Surface (TF12) (LLR T, U)
- ☐ Other (Explain in Remarks)

[3] Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Depth (inches):

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/3/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 008
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.015844
Long: -93.996010
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Ijam clay, 0 to 2 percent slopes, frequently flooded, tidal
NWI Classification: PSS1A

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☑ Yes ☐ No
Wetland Hydrology Present? ☑ Yes ☐ No

Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-005
Habitat Type: PFO

Hydrology

Wetland Hydrology Indicators:

Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? ☑ Yes ☐ No Depth (Inches): 2
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Four primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Ijam clay, 0 to 2 percent slopes, frequently flooded, tidal
NWI Classification: PSS1A

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☑ Yes ☐ No
Wetland Hydrology Present? ☑ Yes ☐ No

Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-006
Habitat Type: PEM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water (A1)
- ☑ High Water Table (A2)
- ☑ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☑ Yes ☐ No Depth (Inches): 2
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Four primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 010

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant Species Across All Strata: 2 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	60	x 1 =	60
FACW Species	40	x 2 =	80
FAC Species	0	x 3 =	0
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	140 (B)

Prevalence Index = B/A = 1.40

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 010

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 4/2	80	7.5 YR 4/6	20	C	M	Silty Clay	

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

☐ Histosol (A1)
☐ Histic Epipedon (A2)
☐ Black Histic (A3)
☐ Hydrogen Sulfide (A4)
☐ Stratified Layers (A5)
☐ Organic Bodies (A6) (LRR P, T, U)
☐ 5 cm Mucky Mineral (A7) (LRR P, T, U)
☐ Mucky Presence (A8) (LRR P, T, U)
☐ 1 cm Muck (A9) (LLR P, T)
☐ Depleted Below Dark Surface (A11)
☐ Thick Dark Surface (A12)
☐ Coast Prairie Redox (A16) (MLRA 150A)
☐ Sandy Mucky Mineral (S1) (LRR O, S)
☐ Sandy Gleyed Matrix (S4)
☐ Sandy Redox (S5)
☐ Stripped Matrix (S6)
☐ Dark Surface (S7) (LRR P, S, T, U)

☐ Polyvalue Below Surface (S8) (LRR S,T,
☐ Thin Dark Surface (S9) (LRR S, T, U)
☐ Loamy Mucky Mineral (F1) (LRR O)
☐ Loamy Gleyed Matrix (F2)
☑ Depleted Matrix (F3)
☐ Redox Dark Surface (F6)
☐ Depleted Dark Surface (F7)
☐ Redox Depressions (F8)
☐ Marl (F10) (LRR U)
☐ Depleted Ochric (F11) (MLRA 151)
☐ Iron-Manganese Masses (F12) (LRR O, P, T)
☐ Umbric Surface (F13) (LRR P, T, U)
☐ Delta Ochric (F17) (MLRA 151)
☐ Reduced Vertic (F18) (MLRA 150A, 150B)
☐ Piedmont Floodplain Soils (F19) (MLRA 149A)
☐ Anomalous Bright Loamy Soils (F20) (MLRA 149A, 153C, 153D)

Indicators for Problematic Hydric Soils[3]:

☐ 1 cm Muck (A9) (LRR O)
☐ 2 cm Muck (A10) (LRR S)
☐ Reduced Vertic (F18) (outside MLRA 150A,
☐ Piedmont Floodplain Soils (F19) (LRR P, S, T)
☐ Anomalous Bright Loamy Soils (F20)
(MLRA 153B)
☐ Red Parent Material (TF2)
☐ Very Shallow Dark Surface (TF12) (LLR T, U)
☐ Other (Explain in Remarks)

[3] Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Local relief (concave, convex, none): Convex
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.018423
Long: -93.994700
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Ijam clay, 0 to 2 percent slopes, frequently flooded, tidal
NWI Classification: PSS1A

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☐ Yes ☑ No
Wetland Hydrology Present? ☐ Yes ☑ No

Is the Sampled Area within the Wetland? Yes: ☐ No: ☑

Remarks:
Hydrophytic vegetation was observed; however, hydrology and hydric soils were not. The sample plot is not within a wetland. Plot is located on an upland island.

Habitat ID:
Habitat Type: Upland

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☐ Yes ☑ No Depth (Inches): 0
Water Table Present? ☐ Yes ☑ No Depth (Inches): >16
Saturation Present? ☐ Yes ☑ No Depth (Inches): >16
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☐ No ☑

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
No indicators of hydrology were present. The hydrology parameter is not met.

Vegetation - Use scientific names of plants.

Sampling Point: 013

Number of Dominant Species That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant Species Across All Strata: 2 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	20	x 2 =	40
FAC Species	70	x 3 =	210
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	90	(A)	250 (B)

Prevalence Index = B/A = 2.78

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL Sampling Point: 013

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 2/1	100					Loamy Clay	

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ Organic Bodies (A6) (LRR P, T, U)
- ☐ 5 cm Mucky Mineral (A7) (LRR P, T, U)
- ☐ Mucky Presence (A8) (LRR P, T, U)
- ☐ 1 cm Muck (A9) (LLR P, T)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Coast Prairie Redox (A16) (MLRA 150A)
- ☐ Sandy Mucky Mineral (S1) (LRR O, S)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)
- ☐ Dark Surface (S7) (LRR P, S, T, U)
- ☐ Polyvalue Below Surface (S8) (LRR S,T,
- ☐ Thin Dark Surface (S9) (LRR S, T, U)
- ☐ Loamy Mucky Mineral (F1) (LRR O)
- ☐ Loamy Gleyed Matrix (F2)
- ☐ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Marl (F10) (LRR U)
- ☐ Depleted Ochric (F11) (MLRA 151)
- ☐ Iron-Manganese Masses (F12) (LRR O, P, T)
- ☐ Umbric Surface (F13) (LRR P, T, U)
- ☐ Delta Ochric (F17) (MLRA 151)
- ☐ Reduced Vertic (F18) (MLRA 150A, 150B)
- ☐ Piedmont Floodplain Soils (F19) (MLRA 149A)
- ☐ Anomalous Bright Loamy Soils (F20) (MLRA 149A, 153C, 153D)

Indicators for Problematic Hydric Soils[3]:

- ☐ 1 cm Muck (A9) (LRR O)
- ☐ 2 cm Muck (A10) (LRR S)
- ☐ Reduced Vertic (F18) (outside MLRA 150A,
- ☐ Piedmont Floodplain Soils (F19) (LRR P, S, T)
- ☐ Anomalous Bright Loamy Soils (F20)
  (MLRA 153B)
- ☐ Red Parent Material (TF2)
- ☐ Very Shallow Dark Surface (TF12) (LLR T, U)
- ☐ Other (Explain in Remarks)

[3] Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Convex
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.018855
Long: -93.994406
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Ijam clay, 0 to 2 percent slopes, frequently flooded, tidal
NWI Classification: PSS1A

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☐ Yes ☑ No
Wetland Hydrology Present? ☐ Yes ☑ No

Is the Sampled Area within the Wetland? Yes: ☐ No: ☑

Remarks:
Hydrophytic vegetation was observed; however, hydrology and hydric soils were not. The sample plot is not within a wetland.

Habitat ID:
Habitat Type: Upland

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☐ Yes ☑ No Depth (Inches): 0
Water Table Present? ☐ Yes ☑ No Depth (Inches): >16
Saturation Present? ☐ Yes ☑ No Depth (Inches): >16
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☐ No ☑

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
No indicators of hydrology were present. The hydrology parameter is not met.

Vegetation - Use scientific names of plants.

Sampling Point: 016

Number of Dominant Species That Are OBL, FACW, or FAC: 4 (A)

Total Number of Dominant Species Across All Strata: 4 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	20	x 2 =	40
FAC Species	110	x 3 =	330
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	130	(A)	370 (B)

Prevalence Index = B/A = 2.85

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 016

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/3/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 019
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.021643
Long: -93.992417
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Ijam clay, 0 to 2 percent slopes, frequently flooded, tidal
NWI Classification: None

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present?	☑ Yes ☐ No	Is the Sampled Area within the Wetland?	Yes: ☑
Hydric Soils Present?	☑ Yes ☐ No		No: ☐
Wetland Hydrology Present?	☑ Yes ☐ No		

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-008
Habitat Type: PEM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	☑ Yes ☐ No	Depth (Inches):	2
Water Table Present?	☑ Yes ☐ No	Depth (Inches):	0
Saturation Present? (includes capillary fringe)	☑ Yes ☐ No	Depth (Inches):	0

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Four primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 019

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant Species Across All Strata: 1 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	80	x 1 =	80
FACW Species	30	x 2 =	60
FAC Species	0	x 3 =	0
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	110 (A)		140 (B)

Prevalence Index = B/A = 1.27

Hydrophytic Vegetation Indicators:

Yes	Dominance Test is >50%
Yes	Prevalence Index is ≤3.0[1]
No	Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 019

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 3/1	60	7.5 YR 4/6	40	C	M	Silty Clay	

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

☐ Histosol (A1)
☐ Histic Epipedon (A2)
☐ Black Histic (A3)
☐ Hydrogen Sulfide (A4)
☐ Stratified Layers (A5)
☐ Organic Bodies (A6) (LRR P, T, U)
☐ 5 cm Mucky Mineral (A7) (LRR P, T, U)
☐ Mucky Presence (A8) (LRR P, T, U)
☐ 1 cm Muck (A9) (LLR P, T)
☐ Depleted Below Dark Surface (A11)
☐ Thick Dark Surface (A12)
☐ Coast Prairie Redox (A16) (MLRA 150A)
☐ Sandy Mucky Mineral (S1) (LRR O, S)
☐ Sandy Gleyed Matrix (S4)
☐ Sandy Redox (S5)
☐ Stripped Matrix (S6)
☐ Dark Surface (S7) (LRR P, S, T, U)

Lat: 30.022021
Long: -93.992023
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Ijam clay, 0 to 2 percent slopes, frequently flooded, tidal
NWI Classification: PSS3A
Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No Hydric Soils Present? ☑ Yes ☐ No Wetland Hydrology Present? ☑ Yes ☐ No	Is the Sampled Area within the Wetland?	Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-009
Habitat Type: PEM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water (A1)
- ☑ High Water Table (A2)
- ☑ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☑ Yes ☐ No Depth (Inches): 2
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Four primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 3 (A)

Total Number of Dominant Species Across All Strata: 3 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	80	x 1 =	80
FACW Species	20	x 2 =	40
FAC Species	0	x 3 =	0
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	120 (B)

Prevalence Index = B/A = 1.20

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 022

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

State: Texas
Sampling Point: 025
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Convex
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.052159
Long: -93.953905
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Zummo muck, 0 to 1 percent slopes, frequently flooded, frequently ponded
NWI Classification: None
Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present?	☑ Yes ☐ No	Is the Sampled Area within the Wetland?
Hydric Soils Present?	☐ Yes ☑ No	Yes: ☐
Wetland Hydrology Present?	☐ Yes ☑ No	No: ☑

Remarks:
Hydrophytic vegetation was observed; however, hydrology and hydric soils were not. The sample plot is not within a wetland.

Habitat ID:
Habitat Type: Upland

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	☐ Yes ☑ No	Depth (Inches): 0
Water Table Present?	☐ Yes ☑ No	Depth (Inches): >16
Saturation Present? (includes capillary fringe)	☐ Yes ☑ No	Depth (Inches): >16

Wetland Hydrology Present?: Yes ☐ No ☑

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
No indicators of hydrology were present. The hydrology parameter is not met.

Vegetation - Use scientific names of plants.

Sampling Point: 025

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant Species Across All Strata: 3 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 67% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	0	x 2 =	0
FAC Species	35	x 3 =	105
FACU Species	95	x 4 =	380
UPL Species	0	x 5 =	0
Column Totals:	130	(A)	485 (B)

Prevalence Index = B/A = 3.73

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

No Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL Sampling Point: 025

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 4/3	100					Clay	Oyster hash and fill material

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

☐ Histosol (A1)
☐ Histic Epipedon (A2)
☐ Black Histic (A3)
☐ Hydrogen Sulfide (A4)
☐ Stratified Layers (A5)
☐ Organic Bodies (A6) (LRR P, T, U)
☐ 5 cm Mucky Mineral (A7) (LRR P, T, U)
☐ Mucky Presence (A8) (LRR P, T, U)
☐ 1 cm Muck (A9) (LLR P, T)
☐ Depleted Below Dark Surface (A11)
☐ Thick Dark Surface (A12)
☐ Coast Prairie Redox (A16) (MLRA 150A)
☐ Sandy Mucky Mineral (S1) (LRR O, S)
☐ Sandy Gleyed Matrix (S4)
☐ Sandy Redox (S5)
☐ Stripped Matrix (S6)
☐ Dark Surface (S7) (LRR P, S, T, U)

☐ Polyvalue Below Surface (S8) (LRR S,T,
☐ Thin Dark Surface (S9) (LRR S, T, U)
☐ Loamy Mucky Mineral (F1) (LRR O)
☐ Loamy Gleyed Matrix (F2)
☐ Depleted Matrix (F3)
☐ Redox Dark Surface (F6)
☐ Depleted Dark Surface (F7)
☐ Redox Depressions (F8)
☐ Marl (F10) (LRR U)
☐ Depleted Ochric (F11) (MLRA 151)
☐ Iron-Manganese Masses (F12) (LRR O, P, T)
☐ Umbric Surface (F13) (LRR P, T, U)
☐ Delta Ochric (F17) (MLRA 151)
☐ Reduced Vertic (F18) (MLRA 150A, 150B)
☐ Piedmont Floodplain Soils (F19) (MLRA 149A)
☐ Anomalous Bright Loamy Soils (F20) (MLRA 149A, 153C, 153D)

Indicators for Problematic Hydric Soils[3]:

☐ 1 cm Muck (A9) (LRR O)
☐ 2 cm Muck (A10) (LRR S)
☐ Reduced Vertic (F18) (outside MLRA 150A,
☐ Piedmont Floodplain Soils (F19) (LRR P, S, T)
☐ Anomalous Bright Loamy Soils (F20)
(MLRA 153B)
☐ Red Parent Material (TF2)
☐ Very Shallow Dark Surface (TF12) (LLR T, U)

Sampling Point: 028
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.054406
Long: -93.951683
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Zummo muck, 0 to 1 percent slopes, frequently flooded, frequently ponded
NWI Classification: None

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☑ Yes ☐ No
Wetland Hydrology Present? ☑ Yes ☐ No

Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-025
Habitat Type: PEM

Hydrology

Wetland Hydrology Indicators:

Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? ☑ Yes ☐ No Depth (Inches): 3
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Four primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 028

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant Species Across All Strata: 2 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	100	x 2 =	200
FAC Species	0	x 3 =	0
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	200 (B)

Prevalence Index = B/A = 2.00

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 028

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 5/1	70	7.5 YR 4/6	30	C	M/PL	Clay	

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

☐ Histosol (A1)
☐ Histic Epipedon (A2)
☐ Black Histic (A3)
☐ Hydrogen Sulfide (A4)
☐ Stratified Layers (A5)
☐ Organic Bodies (A6) (LRR P, T, U)
☐ 5 cm Mucky Mineral (A7) (LRR P, T, U)
☐ Mucky Presence (A8) (LRR P, T, U)
☐ 1 cm Muck (A9) (LLR P, T)
☐ Depleted Below Dark Surface (A11)
☐ Thick Dark Surface (A12)
☐ Coast Prairie Redox (A16) (MLRA 150A)
☐ Sandy Mucky Mineral (S1) (LRR O, S)
☐ Sandy Gleyed Matrix (S4)
☐ Sandy Redox (S5)
☐ Stripped Matrix (S6)
☐ Dark Surface (S7) (LRR P, S, T, U)

Local relief (concave, convex, none): Convex
Slope (%): 1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.042782
Long: -93.965063
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Aris complex, 0 to 1 percent slopes, rarely flooded
NWI Classification: None

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☐ Yes ☑ No
Hydric Soils Present? ☐ Yes ☑ No
Wetland Hydrology Present? ☐ Yes ☑ No

Is the Sampled Area within the Wetland? Yes: ☐ No: ☑

Remarks:
None of the three parameters, hydrophytic vegetation, hydrology and hydric soils, were met. The sample plot is not within a wetland.

Habitat ID:
Habitat Type: Upland

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☐ Yes ☑ No Depth (Inches): 0
Water Table Present? ☐ Yes ☑ No Depth (Inches): >16
Saturation Present? ☐ Yes ☑ No Depth (Inches): >16
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☐ No ☑

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
No indicators of hydrology were present. The hydrology parameter is not met.

Vegetation - Use scientific names of plants.

Sampling Point: 031

Tree stratum (Plot size : 30)	Absolute % Cover	Dominant Species?	Indicator Status

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant Species Across All Strata: 5 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 40% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	0	x 2 =	0
FAC Species	30	x 3 =	90
FACU Species	70	x 4 =	280
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	370 (B)

Prevalence Index = B/A = 3.70

Hydrophytic Vegetation Indicators:

No Dominance Test is >50%

No Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☐ No: ☑

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, or FAC is less than 50%.

SOIL Sampling Point: 031

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 3/4	100					Loam	

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ Organic Bodies (A6) (LRR P, T, U)

Hydric Soil Present? Yes ☐ No ☑

Remarks:

The soils parameter is not met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/4/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 034
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.043960
Long: -93.963716
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Aris complex, 0 to 1 percent slopes, rarely flooded
NWI Classification: None

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)

Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No

Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☑ Yes ☐ No
Wetland Hydrology Present? ☑ Yes ☐ No

Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-012
Habitat Type: PEM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☐ High Water Table
- ☐ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☑ Yes ☐ No Depth (Inches): 1
Water Table Present? ☐ Yes ☑ No Depth (Inches): >16
Saturation Present? ☐ Yes ☑ No Depth (Inches): >16
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Two primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met. Surface water present due to recent rainfall. Plot located in shallow, poorly drained depression.

Vegetation - Use scientific names of plants.

Sampling Point: 034

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant Species Across All Strata: 2 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	50	x 1 =	50
FACW Species	30	x 2 =	60
FAC Species	0	x 3 =	0
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	80	(A)	110 (B)

Prevalence Index = B/A = 1.38

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 034

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 5/2	70	7.5 YR 5/8	30	C	M/PL	Silty Clay	

[1]Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2]Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

☐ Histosol (A1)
☐ Histic Epipedon (A2)
☐ Black Histic (A3)
☐ Hydrogen Sulfide (A4)
☐ Stratified Layers (A5)
☐ Organic Bodies (A6) (LRR P, T, U)
☐ 5 cm Mucky Mineral (A7) (LRR P, T, U)
☐ Mucky Presence (A8) (LRR P, T, U)
☐ 1 cm Muck (A9) (LLR P, T)
☐ Depleted Below Dark Surface (A11)
☐ Thick Dark Surface (A12)
☐ Coast Prairie Redox (A16) (MLRA
☐ Sandy Mucky Mineral (S1) (LRR O, S)
☐ Sandy Gleyed Matrix (S4)
☐ Sandy Redox (S5)
☐ Stripped Matrix (S6)
☐ Dark Surface (S7) (LRR P, S, T, U)

☐ Polyvalue Below Surface (S8) (LRR S,T,
☐ Thin Dark Surface (S9) (LRR S, T, U)
☐ Loamy Mucky Mineral (F1) (LRR O)
☐ Loamy Gleyed Matrix (F2)
☑ Depleted Matrix (F3)
☐ Redox Dark Surface (F6)
☐ Depleted Dark Surface (F7)
☐ Redox Depressions (F8)
☐ Marl (F10) (LRR U)
☐ Depleted Ochric (F11) (MLRA 151)
☐ Iron-Manganese Masses (F12) (LRR O, P, T)
☐ Umbric Surface (F13) (LRR P, T, U)
☐ Delta Ochric (F17) (MLRA 151)
☐ Reduced Vertic (F18) (MLRA 150A, 150B)
☐ Piedmont Floodplain Soils (F19) (MLRA 149A)
☐ Anomalous Bright Loamy Soils (F20) (MLRA 149A, 153C, 153D)

Indicators for Problematic Hydric Soils[3]:

☐ 1 cm Muck (A9) (LRR O)
☐ 2 cm Muck (A10) (LRR S)
☐ Reduced Vertic (F18) (outside MLRA
☐ Piedmont Floodplain Soils (F19) (LRR P, S, T)
☐ Anomalous Bright Loamy Soils (F20)

(MLRA 153B)

☐ Red Parent Material (TF2)
☐ Very Shallow Dark Surface (TF12) (LLR T,
☐ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type:

Depth (inches):

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

State: Texas
Sampling Point: 037
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.044333
Long: -93.963196
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Aris complex, 0 to 1 percent slopes, rarely flooded
NWI Classification: None
Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No Hydric Soils Present? ☑ Yes ☐ No Wetland Hydrology Present? ☑ Yes ☐ No	Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-011
Habitat Type: PFO

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☐ High Water Table
- ☐ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☑ Yes ☐ No Depth (Inches): 1
Water Table Present? ☐ Yes ☑ No Depth (Inches): >16
Saturation Present? ☐ Yes ☑ No Depth (Inches): >16
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Two primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met. Surface water present due to recent rainfall. Plot located in shallow, poorly drained depression.

Vegetation - Use scientific names of plants.

Sampling Point: 037

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 5 (A)

Total Number of Dominant Species Across All Strata: 5 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	50	x 1 =	50
FACW Species	30	x 2 =	60
FAC Species	60	x 3 =	180
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	140	(A)	290 (B)

Prevalence Index = B/A = 2.07

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 037

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 5/2	70	7.5 YR 5/8	30	C	M/PL	Silty Clay	

[1]Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2]Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

☐ Histosol (A1)
☐ Histic Epipedon (A2)
☐ Black Histic (A3)
☐ Hydrogen Sulfide (A4)
☐ Stratified Layers (A5)
☐ Organic Bodies (A6) (LRR P, T, U)
☐ 5 cm Mucky Mineral (A7) (LRR P, T, U)
☐ Mucky Presence (A8) (LRR P, T, U)
☐ 1 cm Muck (A9) (LLR P, T)
☐ Depleted Below Dark Surface (A11)
☐ Thick Dark Surface (A12)
☐ Coast Prairie Redox (A16) (MLRA
☐ Sandy Mucky Mineral (S1) (LRR O, S)
☐ Sandy Gleyed Matrix (S4)
☐ Sandy Redox (S5)
☐ Stripped Matrix (S6)
☐ Dark Surface (S7) (LRR P, S, T, U)

☐ Polyvalue Below Surface (S8) (LRR S,T,
☐ Thin Dark Surface (S9) (LRR S, T, U)
☐ Loamy Mucky Mineral (F1) (LRR O)
☐ Loamy Gleyed Matrix (F2)
☑ Depleted Matrix (F3)
☐ Redox Dark Surface (F6)
☐ Depleted Dark Surface (F7)
☐ Redox Depressions (F8)
☐ Marl (F10) (LRR U)
☐ Depleted Ochric (F11) (MLRA 151)
☐ Iron-Manganese Masses (F12) (LRR O, P, T)
☐ Umbric Surface (F13) (LRR P, T, U)
☐ Delta Ochric (F17) (MLRA 151)
☐ Reduced Vertic (F18) (MLRA 150A, 150B)
☐ Piedmont Floodplain Soils (F19) (MLRA 149A)
☐ Anomalous Bright Loamy Soils (F20) (MLRA 149A, 153C, 153D)

Indicators for Problematic Hydric Soils[3]:

☐ 1 cm Muck (A9) (LRR O)
☐ 2 cm Muck (A10) (LRR S)
☐ Reduced Vertic (F18) (outside MLRA
☐ Piedmont Floodplain Soils (F19) (LRR P, S, T)
☐ Anomalous Bright Loamy Soils (F20)
(MLRA 153B)
☐ Red Parent Material (TF2)
☐ Very Shallow Dark Surface (TF12) (LLR T,
☐ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type:

Depth (inches):

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

Remarks:

The soils parameter is not met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/4/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 040
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Convex
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.045092
Long: -93.962267
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Aris complex, 0 to 1 percent slopes, rarely flooded
NWI Classification: None
Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☐ Yes ☑ No
Wetland Hydrology Present? ☐ Yes ☑ No

Is the Sampled Area within the Wetland? Yes: ☐ No: ☑

Remarks:
Hydrophytic vegetation was observed; however, hydrology and hydric soils were not. The sample plot is not within a wetland.

Habitat ID:
Habitat Type: Upland

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☐ Yes ☑ No Depth (Inches): 0
Water Table Present? ☐ Yes ☑ No Depth (Inches): >16
Saturation Present? ☐ Yes ☑ No Depth (Inches): >16
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☐ No ☑

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
No indicators of hydrology were present. The hydrology parameter is not met.

Vegetation - Use scientific names of plants.

Sampling Point: 040

		Absolute % Cover	Dominant Species?	Indicator Status

			= Total Cover	

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 4 (A)

Total Number of Dominant Species Across All Strata: 6 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 67% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	0	x 2 =	0
FAC Species	70	x 3 =	210
FACU Species	50	x 4 =	200
UPL Species	0	x 5 =	0
Column Totals:	120	(A)	410 (B)

Prevalence Index = B/A = 3.42

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

No Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL Sampling Point: 040

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 3/4	100					Loam	

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ Organic Bodies (A6) (LRR P, T, U)
- ☐ 5 cm Mucky Mineral (A7) (LRR P, T, U)
- ☐ Mucky Presence (A8) (LRR P, T, U)
- ☐ 1 cm Muck (A9) (LLR P, T)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Coast Prairie Redox (A16) (MLRA 150A)
- ☐ Sandy Mucky Mineral (S1) (LRR O, S)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)
- ☐ Dark Surface (S7) (LRR P, S, T, U)
- ☐ Polyvalue Below Surface (S8) (LRR S,T,
- ☐ Thin Dark Surface (S9) (LRR S, T, U)
- ☐ Loamy Mucky Mineral (F1) (LRR O)
- ☐ Loamy Gleyed Matrix (F2)
- ☐ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Marl (F10) (LRR U)
- ☐ Depleted Ochric (F11) (MLRA 151)
- ☐ Iron-Manganese Masses (F12) (LRR O, P, T)
- ☐ Umbric Surface (F13) (LRR P, T, U)
- ☐ Delta Ochric (F17) (MLRA 151)
- ☐ Reduced Vertic (F18) (MLRA 150A, 150B)
- ☐ Piedmont Floodplain Soils (F19) (MLRA 149A)
- ☐ Anomalous Bright Loamy Soils (F20) (MLRA 149A, 153C, 153D)

Indicators for Problematic Hydric Soils[3]:

- ☐ 1 cm Muck (A9) (LRR O)
- ☐ 2 cm Muck (A10) (LRR S)
- ☐ Reduced Vertic (F18) (outside MLRA 150A,
- ☐ Piedmont Floodplain Soils (F19) (LRR P, S, T)
- ☐ Anomalous Bright Loamy Soils (F20)

(MLRA 153B)

- ☐ Red Parent Material (TF2)
- ☐ Very Shallow Dark Surface (TF12) (LLR T, U)
- ☐ Other (Explain in Remarks)

[3] Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type:

Depth (inches):

Hydric Soil Present? Yes ☐ No ☑

Remarks:

The soils parameter is not met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

[3] Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type:
Depth (inches):

Hydric Soil Present? Yes ☑ No ☐

Remarks:
The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/4/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 043
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.046047
Long: -93.961102
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Aris complex, 0 to 1 percent slopes, rarely flooded
NWI Classification: None

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)

Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No

Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present?	☑ Yes ☐ No	Is the Sampled Area within the Wetland? Yes: ☑ No: ☐
Hydric Soils Present?	☑ Yes ☐ No	
Wetland Hydrology Present?	☑ Yes ☐ No	

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-015
Habitat Type: PFO

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☐ High Water Table
- ☐ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☑ Water-Stained Leaves
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? ☑ Yes ☐ No Depth (Inches): 1
Water Table Present? ☐ Yes ☑ No Depth (Inches): >16
Saturation Present? ☐ Yes ☑ No Depth (Inches): >16
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Three primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met. Surface water present due to recent rainfall. Plot located in shallow, poorly drained depression.

Vegetation - Use scientific names of plants.

Sampling Point: 043

Tree stratum (Plot size : 30)	Absolute % Cover	Dominant Species?	Indicator Status

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 3 (A)

Total Number of Dominant Species Across All Strata: 3 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	60	x 2 =	120
FAC Species	45	x 3 =	135
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	105	(A)	255 (B)

Prevalence Index = B/A = 2.43

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 043

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 5/2	70	7.5 YR 5/8	30	C	M/PL	Silty Clay	

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

☐ Histosol (A1)
☐ Histic Epipedon (A2)
☐ Black Histic (A3)
☐ Hydrogen Sulfide (A4)
☐ Stratified Layers (A5)
☐ Organic Bodies (A6) (LRR P, T, U)
☐ 5 cm Mucky Mineral (A7) (LRR P, T, U)
☐ Mucky Presence (A8) (LRR P, T, U)
☐ 1 cm Muck (A9) (LLR P, T)
☐ Depleted Below Dark Surface (A11)
☐ Thick Dark Surface (A12)
☐ Coast Prairie Redox (A16) (MLRA
☐ Sandy Mucky Mineral (S1) (LRR O, S)

- ☐ Very Shallow Dark Surface (TF12) (LLR T, U)
- ☐ Other (Explain in Remarks)

[3] Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type:

Depth (inches):

Hydric Soil Present? Yes ☐ No ☑

Remarks:

The soils parameter is not met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/4/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 046
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.047619
Long: -93.959222
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Aris complex, 0 to 1 percent slopes, rarely flooded
NWI Classification: None

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☑ Yes ☐ No
Wetland Hydrology Present? ☑ Yes ☐ No

Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-018
Habitat Type: PFO

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water (A1)
- ☑ High Water Table (A2)
- ☑ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☑ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☑ Yes ☐ No Depth (Inches): 1
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Five primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 046

Tree stratum (Plot size : 30)	Absolute % Cover	Dominant Species?	Indicator Status

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 3 (A)

Total Number of Dominant Species Across All Strata: 4 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 75% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	10	x 1 =	10
FACW Species	30	x 2 =	60
FAC Species	50	x 3 =	150
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	90	(A)	220 (B)

Prevalence Index = B/A = 2.44

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL Sampling Point: 046

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 5/2	70	7.5 YR 5/8	30	C	M/PL	Silty Clay	

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

☐ Histosol (A1)
☐ Histic Epipedon (A2)
☐ Black Histic (A3)
☐ Hydrogen Sulfide (A4)
☐ Stratified Layers (A5)
☐ Organic Bodies (A6) (LRR P, T, U)
☐ 5 cm Mucky Mineral (A7) (LRR P, T, U)
☐ Mucky Presence (A8) (LRR P, T, U)
☐ 1 cm Muck (A9) (LLR P, T)
☐ Depleted Below Dark Surface (A11)
☐ Thick Dark Surface (A12)
☐ Coast Prairie Redox (A16) (MLRA 150A)
☐ Sandy Mucky Mineral (S1) (LRR O, S)
☐ Sandy Gleyed Matrix (S4)
☐ Sandy Redox (S5)

Indicators for Problematic Hydric Soils[3]:

- ☐ 1 cm Muck (A9) (LRR O)
- ☐ 2 cm Muck (A10) (LRR S)
- ☐ Reduced Vertic (F18) (outside MLRA 150A,
- ☐ Piedmont Floodplain Soils (F19) (LRR P, S, T)
- ☐ Anomalous Bright Loamy Soils (F20)

(MLRA 153B)

- ☐ Red Parent Material (TF2)
- ☐ Very Shallow Dark Surface (TF12) (LLR T, U)
- ☐ Other (Explain in Remarks)

[3] Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type:

Depth (inches):

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/4/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 049
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.048805
Long: -93.957952
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Aris complex, 0 to 1 percent slopes, rarely flooded
NWI Classification: None

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present?	☑ Yes ☐ No	Is the Sampled Area within the Wetland?
Hydric Soils Present?	☑ Yes ☐ No	Yes: ☑
Wetland Hydrology Present?	☑ Yes ☐ No	No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-017
Habitat Type: PEM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water (A1)
- ☑ High Water Table (A2)
- ☑ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	☑ Yes ☐ No	Depth (Inches):	1
Water Table Present?	☑ Yes ☐ No	Depth (Inches):	0
Saturation Present? (includes capillary fringe)	☑ Yes ☐ No	Depth (Inches):	0

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Four primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 049

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant Species Across All Strata: 3 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 67% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	60	x 1 =	60
FACW Species	0	x 2 =	0
FAC Species	0	x 3 =	0
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	60	(A)	60 (B)

Prevalence Index = B/A = 1.00

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL Sampling Point: 049

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 5/1	80	7.5 YR 5/6	20	C	M/PL	Clay	

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ Organic Bodies (A6) (LRR P, T, U)
- ☐ 5 cm Mucky Mineral (A7) (LRR P, T, U)
- ☐ Mucky Presence (A8) (LRR P, T, U)
- ☐ 1 cm Muck (A9) (LLR P, T)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Coast Prairie Redox (A16) (MLRA 150A)
- ☐ Sandy Mucky Mineral (S1) (LRR O, S)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)
- ☐ Dark Surface (S7) (LRR P, S, T, U)
- ☐ Polyvalue Below Surface (S8) (LRR S,T,
- ☐ Thin Dark Surface (S9) (LRR S, T, U)

Depth (inches):

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/4/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 052
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Convex
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.050191
Long: -93.955984
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Aris complex, 0 to 1 percent slopes, rarely flooded
NWI Classification: None

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)

Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No

Are "Normal Circumstances" Present? ☑ Yes ☐ No

Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No

(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☑ Yes ☐ No
Wetland Hydrology Present? ☐ Yes ☑ No

Is the Sampled Area within the Wetland? Yes: ☐ No: ☑

Remarks:
Hydrophytic vegetation and hydric soils were observed; however, hydrology was not. The sample plot is not within a wetland.

Habitat ID:

Habitat Type: Upland

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

☐ Surface Water (A1)
☐ High Water Table (A2)
☐ Saturation
☐ Water Marks (B1)
☐ Sediment Deposits
☐ Drift Deposits (B3)
☐ Algal Mat or Crust
☐ Iron Deposits (B5)
☐ Inundated Visible on Aerial Imagery (B7)

☐ Water-Stained Leaves (B9)
☐ Aquatic Fauna
☐ Marl Deposits (B15) (LRRU)
☐ Hydrogen Sulfide Odor (C1)
☐ Oxidized Rhizoshperes in Living Roots (C3)
☐ Presence of Reduced Iron (C4)
☐ Recent Iron Reduction in Tilled Soil (C6)
☐ Thick Muck Surface (C7)
☐ Other

Secondary Indicators (minimum of two required)
☐ Surface Soil Cracks (B6)
☐ Sparsely Vegetated Concave Surface
☐ Drainage Patterns (B10)
☐ Moss Trim Lines (B16)
☐ Dry-Season Water Table (C2)
☐ Crayfish Burrows
☐ Saturation Visible on Aerial Imagery (C9)
☐ Geomorphic Position (D2)
☐ Shallow Aquitard (D3)
☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☐ Yes ☑ No Depth (Inches): 0
Water Table Present? ☐ Yes ☑ No Depth (Inches): >16
Saturation Present? ☐ Yes ☑ No Depth (Inches): >16
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☐ No ☑

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
No indicators of hydrology were present. The hydrology parameter is not met.

Vegetation - Use scientific names of plants.

Sampling Point: 052

Tree stratum (Plot size : 30)	Absolute % Cover	Dominant Species?	Indicator Status

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 4 (A)

Total Number of Dominant Species Across All Strata: 4 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	0	x 2 =	0
FAC Species	95	x 3 =	285
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	95	(A)	285 (B)

Prevalence Index = B/A = 3.00

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 052

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 4/1	95	7.5 YR 4/6	5	C	M	Clay

Depth (inches):

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/4/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 055
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.050522
Long: -93.955909
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Aris complex, 0 to 1 percent slopes, rarely flooded
NWI Classification: None

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☑ Yes ☐ No
Wetland Hydrology Present? ☑ Yes ☐ No

Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-021
Habitat Type: PEM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☑ Yes ☐ No Depth (Inches): 2
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Four primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met. Plot located in shallow, poorly drained depression.

Vegetation - Use scientific names of plants.

Sampling Point: 055

Dominance Test Worksheet:

Number of Dominant Species
That Are OBL, FACW, or FAC: 3 (A)

Total Number of Dominant
Species Across All Strata: 3 (B)

Percent of Dominant Species
That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	100	x 1 =	100
FACW Species	0	x 2 =	0
FAC Species	0	x 3 =	0
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	100 (B)

Prevalence Index = B/A = 1.00

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%
Yes Prevalence Index is ≤3.0[1]
No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 055

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/4/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 058
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.050822
Long: -93.955433
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Aris complex, 0 to 1 percent slopes, rarely flooded
NWI Classification: None

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present?	☑ Yes ☐ No	Is the Sampled Area within the Wetland? Yes: ☑ No: ☐
Hydric Soils Present?	☑ Yes ☐ No	
Wetland Hydrology Present?	☑ Yes ☐ No	

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-020
Habitat Type: PEM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	☑ Yes ☐ No	Depth (Inches):	2
Water Table Present?	☑ Yes ☐ No	Depth (Inches):	0
Saturation Present? (includes capillary fringe)	☑ Yes ☐ No	Depth (Inches):	0

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Four primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met. Plot located in shallow, poorly drained depression.

Vegetation - Use scientific names of plants.

Sampling Point: 058

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 3 (A)

Total Number of Dominant Species Across All Strata: 3 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	100	x 1 =	100
FACW Species	0	x 2 =	0
FAC Species	0	x 3 =	0
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	100 (B)

Prevalence Index = B/A = 1.00

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 058

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Hydric Soil Present? Yes ☑ No ☐

Remarks:
The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/4/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 061
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Convex
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.055571
Long: -93.950278
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Zummo muck, 0 to 1 percent slopes, frequently flooded, frequently ponded
NWI Classification: PFO1A

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present?	☑ Yes ☐ No	Is the Sampled Area within the Wetland? Yes: ☐ No: ☑
Hydric Soils Present?	☐ Yes ☑ No	
Wetland Hydrology Present?	☐ Yes ☑ No	

Remarks:
Hydrophytic vegetation was observed; however, hydrology and hydric soils were not. The sample plot is not within a wetland.

Habitat ID:
Habitat Type: Upland

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	☐ Yes ☑ No	Depth (Inches): 0
Water Table Present?	☐ Yes ☑ No	Depth (Inches): >16
Saturation Present? (includes capillary fringe)	☐ Yes ☑ No	Depth (Inches): >16

Wetland Hydrology Present?: Yes ☐ No ☑

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
No indicators of hydrology were present. The hydrology parameter is not met.

Vegetation - Use scientific names of plants.

Sampling Point: 061

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant Species Across All Strata: 2 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 50% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	20	x 2 =	40
FAC Species	0	x 3 =	0
FACU Species	80	x 4 =	320
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	360 (B)

Prevalence Index = B/A = 3.60

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

No Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 061

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 3/2	95	7.5 YR 4/6	5	C	M/PL	Clay

Depth (inches):

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/4/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 064
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.056143
Long: -93.950187
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Zummo muck, 0 to 1 percent slopes, frequently flooded, frequently ponded
NWI Classification: None

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)

Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No

Are "Normal Circumstances" Present? ☑ Yes ☐ No

Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No

(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present?	☑ Yes ☐ No	Is the Sampled Area within the Wetland? Yes: ☑ No: ☐
Hydric Soils Present?	☑ Yes ☐ No	
Wetland Hydrology Present?	☑ Yes ☐ No	

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-030
Habitat Type: PFO

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? ☑ Yes ☐ No Depth (Inches): 1
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Four primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 064

Tree stratum (Plot size : 30)	Absolute % Cover	Dominant Species?	Indicator Status

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 4 (A)

Total Number of Dominant Species Across All Strata: 4 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	80	x 2 =	160
FAC Species	60	x 3 =	180
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	140	(A)	340 (B)

Prevalence Index = B/A = 2.43

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 064

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features

Depth (inches):

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/4/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 067
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.058820
Long: -93.946656
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Anahuac complex, 0 to 1 percent slopes
NWI Classification: E2EM1P

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☑ Yes ☐ No
Wetland Hydrology Present? ☑ Yes ☐ No

Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-033
Habitat Type: PEM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water (A1)
- ☑ High Water Table (A2)
- ☑ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☑ Yes ☐ No Depth (Inches): 2
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Four primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 067

Tree stratum (Plot size : 30)	Absolute % Cover	Dominant Species?	Indicator Status

		= Total Cover	

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant Species Across All Strata: 2 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	90	x 1 =	90
FACW Species	10	x 2 =	20
FAC Species	0	x 3 =	0
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	110 (B)

Prevalence Index = B/A = 1.10

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 067

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features

Hydric Soil Present? Yes ☑ No ☐

Remarks:
The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/4/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 070
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Convex
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.058749
Long: -93.946076
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Anahuac complex, 0 to 1 percent slopes
NWI Classification: E2EM1P

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present?	☑ Yes ☐ No	Is the Sampled Area within the Wetland?
Hydric Soils Present?	☑ Yes ☐ No	Yes: ☐
Wetland Hydrology Present?	☐ Yes ☑ No	No: ☑

Remarks:
Hydrophytic vegetation and hydric soils were observed; however, hydrology was not. The sample plot is not within a wetland.

Habitat ID:
Habitat Type: Upland

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☐ Yes ☑ No Depth (Inches): 0
Water Table Present? ☐ Yes ☑ No Depth (Inches): >16
Saturation Present? ☐ Yes ☑ No Depth (Inches): >16
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☐ No ☑

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
No indicators of hydrology were present. The hydrology parameter is not met.

Vegetation - Use scientific names of plants.

Sampling Point: 070

Tree stratum (Plot size : 30)		Absolute % Cover	Dominant Species?	Indicator Status

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 3 (A)

Total Number of Dominant Species Across All Strata: 3 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	0	x 2 =	0
FAC Species	100	x 3 =	300
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	300 (B)

Prevalence Index = B/A = 3.00

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL Sampling Point: 070

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 4/2	80	7.5 YR 4/6	20	C	M	Clay	

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

☐ Histosol (A1)
☐ Histic Epipedon (A2)
☐ Black Histic (A3)
☐ Hydrogen Sulfide (A4)
☐ Stratified Layers (A5)
☐ Organic Bodies (A6) (LRR P, T, U)

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/4/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 073
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.059127
Long: -93.941110
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Anahuac complex, 0 to 1 percent slopes
NWI Classification: None

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)

Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No

Are "Normal Circumstances" Present? ☑ Yes ☐ No

Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No

(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present?	☑ Yes ☐ No	Is the Sampled Area within the Wetland?
Hydric Soils Present?	☑ Yes ☐ No	Yes: ☑
Wetland Hydrology Present?	☑ Yes ☐ No	No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-038
Habitat Type: PEM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water (A1)
- ☑ High Water Table (A2)
- ☑ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	☑ Yes ☐ No	Depth (Inches): 2
Water Table Present?	☑ Yes ☐ No	Depth (Inches): 0
Saturation Present? (includes capillary fringe)	☑ Yes ☐ No	Depth (Inches): 0

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Four primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 073

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant Species Across All Strata: 2 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	50	x 1 =	50
FACW Species	50	x 2 =	100
FAC Species	0	x 3 =	0
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	150 (B)

Prevalence Index = B/A = 1.50

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 073

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/5/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 076
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Convex
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.056023
Long: -93.928064
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Urban land complex, 0 to 2 percent slopes, rarely flooded
NWI Classification: None
Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☐ Yes ☑ No
Wetland Hydrology Present? ☐ Yes ☑ No

Is the Sampled Area within the Wetland? Yes: ☐ No: ☑

Remarks:
Hydrophytic vegetation was observed; however, hydrology and hydric soils were not. The sample plot is not within a wetland.

Habitat ID:
Habitat Type: Upland

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☐ Yes ☑ No Depth (Inches): 0
Water Table Present? ☐ Yes ☑ No Depth (Inches): >16
Saturation Present? ☐ Yes ☑ No Depth (Inches): >16
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☐ No ☑

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
No indicators of hydrology were present. The hydrology parameter is not met.

Vegetation - Use scientific names of plants.

Sampling Point: 076

Tree stratum (Plot size : 30)	Absolute % Cover	Dominant Species?	Indicator Status

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 3 (A)

Total Number of Dominant Species Across All Strata: 5 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 60% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	10	x 2 =	20
FAC Species	60	x 3 =	180
FACU Species	50	x 4 =	200
UPL Species	0	x 5 =	0
Column Totals:	120	(A)	400 (B)

Prevalence Index = B/A = 3.33

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

No Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 076

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 3/2	100					Clay	

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/5/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 079
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.055257
Long: -93.925501
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Urban land complex, 0 to 2 percent slopes, rarely flooded
NWI Classification: None
Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present?	☑ Yes ☐ No	Is the Sampled Area within the Wetland? Yes: ☑ No: ☐
Hydric Soils Present?	☑ Yes ☐ No	
Wetland Hydrology Present?	☑ Yes ☐ No	

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-047
Habitat Type: PEM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☑ Yes ☐ No Depth (Inches): 1
Water Table Present? ☑ Yes ☐ No Depth (Inches): 6
Saturation Present? ☑ Yes ☐ No Depth (Inches): 6
(includes capillary fringe)
Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Four primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met. Surface water present due to recent rainfall.

Vegetation - Use scientific names of plants.

Sampling Point: 079

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant Species Across All Strata: 1 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	100	x 2 =	200
FAC Species	0	x 3 =	0
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	200 (B)

Prevalence Index = B/A = 2.00

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 079

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 4/2	80	7.5 YR 6/8	20	C	M	Silty Clay	

[1]Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2]Location: PL=Pore Lining, M=Matrix.

Depth (inches):

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site:	Blue Marlin Offshore Port Project	City/ County:	Orange	Sampling Date:	3/5/2020
Applicant/Owner:	Blue Marlin Offshore Port LLC	State:	Texas	Sampling Point:	082
Investigator(s):	BS, RC, HK	Section, Township, Range:			
Landform (hillside, terrace, etc.):	Plain	Local relief (concave, convex, none):	Convex	Slope (%):	<1
Subregion (LRRA or MLRA):	LRR-T	Lat:	30.053720	Long:	-93.920604
				Datum:	NAD 83, Decimal Degrees
Soil Map Unit Name:	Orcadia-Anahuac complex, 0 to 1 percent slopes, rarely flooded			NWI Classification:	None

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)

Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No

Are "Normal Circumstances" Present? ☑ Yes ☐ No

Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No

(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present?	☐ Yes ☑ No	Is the Sampled Area within the Wetland? Yes: ☐ No: ☑
Hydric Soils Present?	☐ Yes ☑ No	
Wetland Hydrology Present?	☐ Yes ☑ No	

Remarks:
None of the three parameters, hydrophytic vegetation, hydrology and hydric soils, were met. The sample plot is not within a wetland.

Habitat ID:	Habitat Type: Upland

Hydrology

Wetland Hydrology Indicators:

Primary indicators (minimum of one required; check all that apply)

- ☐ Surface Water
- ☐ High Water Table
- ☐ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? ☐ Yes ☑ No Depth (Inches): 0
Water Table Present? ☐ Yes ☑ No Depth (Inches): >16
Saturation Present? ☐ Yes ☑ No Depth (Inches): >16
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☐ No ☑

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
No indicators of hydrology were present. The hydrology parameter is not met.

Vegetation - Use scientific names of plants.

Sampling Point: 082

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 0 (A)

Total Number of Dominant Species Across All Strata: 4 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 0% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	0	x 2 =	0
FAC Species	0	x 3 =	0
FACU Species	100	x 4 =	400
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	400 (B)

Prevalence Index = B/A = 4.00

Hydrophytic Vegetation Indicators:

No Dominance Test is >50%

No Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☐ **No:** ☑

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, or FAC is less than 50%.

SOIL

Sampling Point: 082

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/5/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 085
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Convex
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.053217
Long: -93.919100
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Anahuac complex, 0 to 1 percent slopes, rarely flooded
NWI Classification: None
Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present?	☐ Yes ☑ No	Is the Sampled Area within the Wetland? Yes: ☐ No: ☑
Hydric Soils Present?	☐ Yes ☑ No	
Wetland Hydrology Present?	☐ Yes ☑ No	

Remarks:
None of the three parameters, hydrophytic vegetation, hydrology and hydric soils, were met. The sample plot is not within a wetland.

Habitat ID:
Habitat Type: Upland

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☐ Surface Water
- ☐ High Water Table
- ☐ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☐ Yes ☑ No Depth (Inches): 0
Water Table Present? ☐ Yes ☑ No Depth (Inches): >16
Saturation Present? ☐ Yes ☑ No Depth (Inches): >16
(includes capillary fringe)
Wetland Hydrology Present?: Yes ☐ No ☑

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
No indicators of hydrology were present. The hydrology parameter is not met.

Vegetation - Use scientific names of plants.

Sampling Point: 085

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 0 (A)

Total Number of Dominant Species Across All Strata: 1 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 0% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	10	x 2 =	20
FAC Species	0	x 3 =	0
FACU Species	90	x 4 =	360
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	380 (B)

Prevalence Index = B/A = 3.80

Hydrophytic Vegetation Indicators:

No Dominance Test is >50%

No Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☐ No: ☑

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, or FAC is less than 50%.

SOIL

Sampling Point: 085

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Indicators for Problematic Hydric Soils[3]:

☐ 1 cm Muck (A9) (LRR O)
☐ 2 cm Muck (A10) (LRR S)
☐ Reduced Vertic (F18) (outside MLRA
☐ Piedmont Floodplain Soils (F19) (LRR P, S, T)
☐ Anomalous Bright Loamy Soils (F20)
(MLRA 153B)
☐ Red Parent Material (TF2)
☐ Very Shallow Dark Surface (TF12) (LLR T,
☐ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type:
Depth (inches):

Hydric Soil Present? Yes ☐ No ☑

Remarks:
The soils parameter is not met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/5/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 088
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.052828
Long: -93.917459
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Anahuac complex, 0 to 1 percent slopes, rarely flooded
NWI Classification: None
Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No Hydric Soils Present? ☑ Yes ☐ No Wetland Hydrology Present? ☑ Yes ☐ No	Is the Sampled Area within the Wetland?	Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-055
Habitat Type: PEM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☑ Yes ☐ No Depth (Inches): 1
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)
Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Four primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 088

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant Species Across All Strata: 2 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	10	x 1 =	10
FACW Species	90	x 2 =	180
FAC Species	0	x 3 =	0
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	190 (B)

Prevalence Index = B/A = 1.90

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 088

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 5/2	95	7.5 YR 4/6	5	C	M	Clay	

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains.

[2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)

Hydric Soil Present? Yes ☐ No ☑

Remarks:

The soils parameter is not met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/5/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 091
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.044773
Long: -93.905300
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Anahuac complex, 0 to 1 percent slopes, rarely flooded
NWI Classification: None

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)

Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No

Are "Normal Circumstances" Present? ☑ Yes ☐ No

Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No

(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No Hydric Soils Present? ☑ Yes ☐ No Wetland Hydrology Present? ☑ Yes ☐ No	Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-059	Habitat Type: PEM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? ☑ Yes ☐ No Depth (Inches): 2
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Four primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 091

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant Species Across All Strata: 2 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	30	x 1 =	30
FACW Species	70	x 2 =	140
FAC Species	0	x 3 =	0
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	170 (B)

Prevalence Index = B/A = 1.70

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL Sampling Point: 091

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 5/1	60	7.5 YR 5/8	40	C	M/PL	Silty Clay	

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2] Location: PL=Pore Lining, M=Matrix.

(MLRA 153B)

- ☐ Red Parent Material (TF2)
- ☐ Very Shallow Dark Surface (TF12) (LLR T,
- ☐ Other (Explain in Remarks)

[3] Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type:

Depth (inches):

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/5/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 094
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Convex
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.045901
Long: -93.906325
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Anahuac complex, 0 to 1 percent slopes, rarely flooded
NWI Classification: None

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☐ Yes ☑ No
Wetland Hydrology Present? ☐ Yes ☑ No

Is the Sampled Area within the Wetland? Yes: ☐ No: ☑

Remarks:
Hydrophytic vegetation was observed; however, hydrology and hydric soils were not. The sample plot is not within a wetland.

Habitat ID:
Habitat Type: Upland

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☐ Yes ☑ No Depth (Inches): 0
Water Table Present? ☐ Yes ☑ No Depth (Inches): >16
Saturation Present? ☐ Yes ☑ No Depth (Inches): >16
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☐ No ☑

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
No indicators of hydrology were present. The hydrology parameter is not met.

Vegetation - Use scientific names of plants.

Sampling Point: 094

Tree stratum (Plot size : 30)	Absolute % Cover	Dominant Species?	Indicator Status
1. *Pinus taeda*	20	Yes	FAC

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 4 (A)

Total Number of Dominant Species Across All Strata: 5 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 80% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	0	x 2 =	0
FAC Species	70	x 3 =	210
FACU Species	30	x 4 =	120
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	330 (B)

Prevalence Index = B/A = 3.30

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

No Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL Sampling Point: 094

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 5/3	100			C	M	Sandy Clay	

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

☐ Histosol (A1)
☐ Histic Epipedon (A2)
☐ Black Histic (A3)
☐ Hydrogen Sulfide (A4)
☐ Stratified Layers (A5)
☐ Organic Bodies (A6) (LRR P, T, U)
☐ 5 cm Mucky Mineral (A7) (LRR P, T, U)
☐ Mucky Presence (A8) (LRR P, T, U)
☐ 1 cm Muck (A9) (LLR P, T)
☐ Depleted Below Dark Surface (A11)
☐ Thick Dark Surface (A12)
☐ Coast Prairie Redox (A16) (MLRA 150A)
☐ Sandy Mucky Mineral (S1) (LRR O, S)
☐ Sandy Gleyed Matrix (S4)
☐ Sandy Redox (S5)
☐ Stripped Matrix (S6)
☐ Dark Surface (S7) (LRR P, S, T, U)

☐ Polyvalue Below Surface (S8) (LRR S,T,
☐ Thin Dark Surface (S9) (LRR S, T, U)
☐ Loamy Mucky Mineral (F1) (LRR O)
☐ Loamy Gleyed Matrix (F2)
☐ Depleted Matrix (F3)
☐ Redox Dark Surface (F6)
☐ Depleted Dark Surface (F7)
☐ Redox Depressions (F8)
☐ Marl (F10) (LRR U)
☐ Depleted Ochric (F11) (MLRA 151)
☐ Iron-Manganese Masses (F12) (LRR O, P, T)
☐ Umbric Surface (F13) (LRR P, T, U)
☐ Delta Ochric (F17) (MLRA 151)
☐ Reduced Vertic (F18) (MLRA 150A, 150B)
☐ Piedmont Floodplain Soils (F19) (MLRA 149A)
☐ Anomalous Bright Loamy Soils (F20) (MLRA 149A, 153C, 153D)

Indicators for Problematic Hydric Soils[3]:

☐ 1 cm Muck (A9) (LRR O)
☐ 2 cm Muck (A10) (LRR S)
☐ Reduced Vertic (F18) (outside MLRA 150A,
☐ Piedmont Floodplain Soils (F19) (LRR P, S, T)
☐ Anomalous Bright Loamy Soils (F20)
(MLRA 153B)
☐ Red Parent Material (TF2)
☐ Very Shallow Dark Surface (TF12) (LLR T, U)
☐ Other (Explain in Remarks)

☐ Piedmont Floodplain Soils (F19) (MLRA 149A)
☐ Anomalous Bright Loamy Soils (F20) (MLRA 149A, 153C, 153D)

Indicators for Problematic Hydric Soils[3]:

☐ 1 cm Muck (A9) (LRR O)
☐ 2 cm Muck (A10) (LRR S)
☐ Reduced Vertic (F18) (outside MLRA 150A,
☐ Piedmont Floodplain Soils (F19) (LRR P, S, T)
☐ Anomalous Bright Loamy Soils (F20)
(MLRA 153B)
☐ Red Parent Material (TF2)
☐ Very Shallow Dark Surface (TF12) (LLR T, U)
☐ Other (Explain in Remarks)

[3] Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type:
Depth (inches):

Hydric Soil Present? Yes ☐ No ☑

Remarks:

The soils parameter is not met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/5/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 097
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.037362
Long: -93.896379
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Aris complex, 0 to 1 percent slopes, rarely flooded
NWI Classification: PFO1A

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)

Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No

Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present?	☑ Yes ☐ No	Is the Sampled Area within the Wetland? Yes: ☑ No: ☐
Hydric Soils Present?	☑ Yes ☐ No	
Wetland Hydrology Present?	☑ Yes ☐ No	

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-062
Habitat Type: PFO

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water (A1)
- ☑ High Water Table (A2)
- ☑ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☑ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	☑ Yes ☐ No	Depth (Inches): 1
Water Table Present?	☑ Yes ☐ No	Depth (Inches): 0
Saturation Present? (includes capillary fringe)	☑ Yes ☐ No	Depth (Inches): 0

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Five primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 097

Tree stratum (Plot size : 30)	Absolute % Cover	Dominant Species?	Indicator Status
1. *Liquidambar styraciflua*	30	Yes	FAC
2. *Quercus nigra*	10	Yes	FAC

		= Total Cover	

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 4 (A)

Total Number of Dominant Species Across All Strata: 4 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	5	x 2 =	10
FAC Species	50	x 3 =	150
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	55	(A)	160 (B)

Prevalence Index = B/A = 2.91

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 097

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Hydric Soil Present? Yes ☐ No ☑

Remarks:

The soils parameter is not met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/5/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 100
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.036280
Long: -93.895424
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Aris complex, 0 to 1 percent slopes, rarely flooded
NWI Classification: PFO1A

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☑ Yes ☐ No
Wetland Hydrology Present? ☑ Yes ☐ No

Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-062
Habitat Type: PFO

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water (A1)
- ☑ High Water Table (A2)
- ☑ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☑ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☑ Yes ☐ No Depth (Inches): 1
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Five primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 100

Tree stratum (Plot size : 30)		Absolute % Cover	Dominant Species?	Indicator Status
1.	*Liquidambar styraciflua*	30	Yes	FAC

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 3 (A)

Total Number of Dominant Species Across All Strata: 3 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	0	x 2 =	0
FAC Species	50	x 3 =	150
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	50	(A)	150 (B)

Prevalence Index = B/A = 3.00

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 100

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Hydric Soil Present? Yes ☐ No ☑

Remarks:

The soils parameter is not met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/5/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 103
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.036302
Long: -93.894838
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Aris complex, 0 to 1 percent slopes, rarely flooded
NWI Classification: PFO1A

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No Hydric Soils Present? ☑ Yes ☐ No Wetland Hydrology Present? ☑ Yes ☐ No	Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-063
Habitat Type: PFO

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water (A1)
- ☑ High Water Table (A2)
- ☑ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☑ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☑ Yes ☐ No Depth (Inches): 1
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Five primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 103

Tree stratum (Plot size : 30)		Absolute % Cover	Dominant Species?	Indicator Status
1.	*Triadica sebifera*	20	Yes	FAC

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 6 (A)

Total Number of Dominant Species Across All Strata: 6 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	60	x 1 =	60
FACW Species	30	x 2 =	60
FAC Species	40	x 3 =	120
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	130	(A)	240 (B)

Prevalence Index = B/A = 1.85

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 103

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Hydric Soil Present? Yes ☐ No ☑

Remarks:

The soils parameter is not met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/5/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 106
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.033471
Long: -93.892471
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia silt loam, 0 to 2 percent slopes, rarely flooded
NWI Classification: PEM1A

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)

Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No

Are "Normal Circumstances" Present? ☑ Yes ☐ No

Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No

(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present?	☑ Yes ☐ No	Is the Sampled Area within the Wetland? Yes: ☑ No: ☐
Hydric Soils Present?	☑ Yes ☐ No	
Wetland Hydrology Present?	☑ Yes ☐ No	

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-066
Habitat Type: PFO

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water (A1)
- ☑ High Water Table (A2)
- ☑ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	☑ Yes ☐ No	Depth (Inches):	2
Water Table Present?	☑ Yes ☐ No	Depth (Inches):	0
Saturation Present? (includes capillary fringe)	☑ Yes ☐ No	Depth (Inches):	0

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Three primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 106

Tree stratum (Plot size : 30)	Absolute % Cover	Dominant Species?	Indicator Status
1. *Liquidambar styraciflua*	20	Yes	FAC

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 4 (A)

Total Number of Dominant Species Across All Strata: 4 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	20	x 2 =	40
FAC Species	40	x 3 =	120
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	60	(A)	160 (B)

Prevalence Index = B/A = 2.67

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 106

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Remarks:

The soils parameter is not met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/5/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 109
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Convex
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.031088
Long: -93.890004
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia silt loam, 0 to 2 percent slopes, rarely flooded
NWI Classification: PEM1A

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)

Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☐ Yes ☑ No
Wetland Hydrology Present? ☐ Yes ☑ No

Is the Sampled Area within the Wetland? Yes: ☐ No: ☑

Remarks:
Hydrophytic vegetation was observed; however, hydrology and hydric soils were not. The sample plot is not within a wetland.

Habitat ID:
Habitat Type: Upland

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☐ Yes ☑ No Depth (Inches): 0
Water Table Present? ☐ Yes ☑ No Depth (Inches): >16
Saturation Present? ☐ Yes ☑ No Depth (Inches): >16
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☐ No ☑

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
No indicators of hydrology were present. The hydrology parameter is not met.

Vegetation - Use scientific names of plants.

Sampling Point: 109

Tree stratum (Plot size : 30)		Absolute % Cover	Dominant Species?	Indicator Status

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 4 (A)

Total Number of Dominant Species Across All Strata: 5 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 80% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	0	x 2 =	0
FAC Species	90	x 3 =	270
FACU Species	20	x 4 =	80
UPL Species	0	x 5 =	0
Column Totals:	110	(A)	350 (B)

Prevalence Index = B/A = 3.18

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

No Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL Sampling Point: 109

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks

Hydric Soil Indicators:

☐ Histosol (A1)
☐ Histic Epipedon (A2)
☐ Black Histic (A3)
☐ Hydrogen Sulfide (A4)
☐ Stratified Layers (A5)
☐ Organic Bodies (A6) (LRR P, T, U)
☐ 5 cm Mucky Mineral (A7) (LRR P, T, U)
☐ Mucky Presence (A8) (LRR P, T, U)
☐ 1 cm Muck (A9) (LLR P, T)
☐ Depleted Below Dark Surface (A11)
☐ Thick Dark Surface (A12)
☐ Coast Prairie Redox (A16) (MLRA 150A)
☐ Sandy Mucky Mineral (S1) (LRR O, S)
☐ Sandy Gleyed Matrix (S4)
☐ Sandy Redox (S5)
☐ Stripped Matrix (S6)
☐ Dark Surface (S7) (LRR P, S, T, U)

☐ Polyvalue Below Surface (S8) (LRR S,T,
☐ Thin Dark Surface (S9) (LRR S, T, U)
☐ Loamy Mucky Mineral (F1) (LRR O)
☐ Loamy Gleyed Matrix (F2)
☑ Depleted Matrix (F3)
☐ Redox Dark Surface (F6)
☐ Depleted Dark Surface (F7)
☐ Redox Depressions (F8)
☐ Marl (F10) (LRR U)
☐ Depleted Ochric (F11) (MLRA 151)
☐ Iron-Manganese Masses (F12) (LRR O, P, T)
☐ Umbric Surface (F13) (LRR P, T, U)
☐ Delta Ochric (F17) (MLRA 151)
☐ Reduced Vertic (F18) (MLRA 150A, 150B)
☐ Piedmont Floodplain Soils (F19) (MLRA 149A)
☐ Anomalous Bright Loamy Soils (F20) (MLRA 149A, 153C, 153D)

Indicators for Problematic Hydric Soils[3]:

☐ 1 cm Muck (A9) (LRR O)
☐ 2 cm Muck (A10) (LRR S)
☐ Reduced Vertic (F18) (outside MLRA 150A,
☐ Piedmont Floodplain Soils (F19) (LRR P, S, T)
☐ Anomalous Bright Loamy Soils (F20)
(MLRA 153B)
☐ Red Parent Material (TF2)
☐ Very Shallow Dark Surface (TF12) (LLR T, U)
☐ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type:

Depth (inches):

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/5/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 112
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Convex
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.029939
Long: -93.888833
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Aris complex, 0 to 1 percent slopes, rarely flooded
NWI Classification: PEM1Ch

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☐ Yes ☑ No
Wetland Hydrology Present? ☐ Yes ☑ No

Is the Sampled Area within the Wetland? Yes: ☐ No: ☑

Remarks:
Hydrophytic vegetation was observed; however, hydrology and hydric soils were not. The sample plot is not within a wetland.

Habitat ID:
Habitat Type: Upland

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☐ Yes ☑ No Depth (Inches): 0
Water Table Present? ☐ Yes ☑ No Depth (Inches): >16
Saturation Present? ☐ Yes ☑ No Depth (Inches): >16
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☐ No ☑

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
No indicators of hydrology were present. The hydrology parameter is not met.

Vegetation - Use scientific names of plants.

Sampling Point: 112

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant Species Across All Strata: 4 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 50% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	20	x 2 =	40
FAC Species	20	x 3 =	60
FACU Species	50	x 4 =	200
UPL Species	0	x 5 =	0
Column Totals:	90	(A)	300 (B)

Prevalence Index = B/A = 3.33

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

No Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 112

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features

Depth (inches):

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/5/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 115
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Convex
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.058662
Long: -93.935720
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Anahuac complex, 0 to 1 percent slopes
NWI Classification: None

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☐ Yes ☑ No Hydric Soils Present? ☐ Yes ☑ No Wetland Hydrology Present? ☐ Yes ☑ No	Is the Sampled Area within the Wetland? Yes: ☐ No: ☑

Remarks:
None of the three parameters, hydrophytic vegetation, hydrology and hydric soils, were met. The sample plot is not within a wetland. Plot was taken on roadway surface. No hydrology indicators were observed.

Habitat ID:
Habitat Type: Upland

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☐ Surface Water
- ☐ High Water Table
- ☐ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☐ Yes ☑ No Depth (Inches): 0
Water Table Present? ☐ Yes ☑ No Depth (Inches): >16
Saturation Present? ☐ Yes ☑ No Depth (Inches): >16
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☐ No ☑

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
No indicators of hydrology were present. The hydrology parameter is not met.

Vegetation - Use scientific names of plants.

Sampling Point: 115

Hydrophytic Vegetation Indicators:

______ Dominance Test is >50%

______ Prevalence Index is ≤3.0[1]

______ Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☐ **No:** ☑

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is less than 50%. No vegetation observed on roadway surface.

SOIL

Sampling Point: 115

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks

Depth (inches):

Hydric Soil Present? Yes ☑ No ☐

Remarks:
The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/5/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 118
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Convex
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.058384
Long: -93.935558
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Anahuac complex, 0 to 1 percent slopes
NWI Classification: None

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☐ Yes ☑ No
Hydric Soils Present? ☐ Yes ☑ No
Wetland Hydrology Present? ☐ Yes ☑ No

Is the Sampled Area within the Wetland? Yes: ☐ No: ☑

Remarks:
None of the three parameters, hydrophytic vegetation, hydrology and hydric soils, were met. The sample plot is not within a wetland. Plot taken on gravel road.

Habitat ID:
Habitat Type: Upland

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits (B5)
- ☐ Inundated Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines (B16)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☐ Yes ☑ No Depth (Inches): 0
Water Table Present? ☐ Yes ☑ No Depth (Inches): >16
Saturation Present? ☐ Yes ☑ No Depth (Inches): >16
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☐ No ☑

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
No indicators of hydrology were present. The hydrology parameter is not met.

Vegetation - Use scientific names of plants.

Sampling Point: 118

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 0 (A)

Total Number of Dominant Species Across All Strata: 1 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 0% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:
OBL Species	0	x 1 = 0
FACW Species	0	x 2 = 0
FAC Species	0	x 3 = 0
FACU Species	60	x 4 = 240
UPL Species	0	x 5 = 0
Column Totals:	60 (A)	240 (B)

Prevalence Index = B/A = 4.00

Hydrophytic Vegetation Indicators:

No Dominance Test is >50%

No Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☐ No: ☑

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, or FAC is less than 50%.

SOIL

Sampling Point: 118

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains.

[2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

☐ Histosol (A1)
☐ Histic Epipedon (A2)
☐ Black Histic (A3)
☐ Hydrogen Sulfide (A4)
☐ Stratified Layers (A5)
☐ Organic Bodies (A6) (LRR P, T, U)

The soils parameter is not met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/6/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 121
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Convex
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.059004
Long: -93.938660
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Anahuac complex, 0 to 1 percent slopes
NWI Classification: None

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)

Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No

Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present?	☐ Yes ☑ No	Is the Sampled Area within the Wetland? Yes: ☐ No: ☑
Hydric Soils Present?	☑ Yes ☐ No	
Wetland Hydrology Present?	☐ Yes ☑ No	

Remarks:
Hydrophytic vegetation and hydrology were not observed. Hydric soils were observed. The sample plot is not within a wetland.

Habitat ID:
Habitat Type: Upland

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☐ Surface Water
- ☐ High Water Table
- ☐ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	☐ Yes ☑ No	Depth (Inches): 0
Water Table Present?	☐ Yes ☑ No	Depth (Inches): >16
Saturation Present? (includes capillary fringe)	☐ Yes ☑ No	Depth (Inches): >16

Wetland Hydrology Present?: Yes ☐ No ☑

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
No indicators of hydrology were present. The hydrology parameter is not met.

Vegetation - Use scientific names of plants.

Sampling Point: 121

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 0 (A)

Total Number of Dominant Species Across All Strata: 1 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 0% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	10	x 2 =	20
FAC Species	0	x 3 =	0
FACU Species	90	x 4 =	360
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	380 (B)

Prevalence Index = B/A = 3.80

Hydrophytic Vegetation Indicators:

No Dominance Test is >50%

No Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☐ **No:** ☑

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, or FAC is less than 50%.

SOIL

Sampling Point: 121

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix Color (moist)	Matrix %	Redox Features Color (moist)	Redox Features %	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 4/2	90	7.5 YR 5/6	10	C	M	Fine Clay

Hydric Soil Present? Yes ☐ No ☑

Remarks:

The soils parameter is not met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 3/6/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 124
Investigator(s): BS, RC, HK
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.058793
Long: -93.939351
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Anahuac complex, 0 to 1 percent slopes
NWI Classification: PFO1C

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No Hydric Soils Present? ☑ Yes ☐ No Wetland Hydrology Present? ☑ Yes ☐ No	Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland. Positive result for alpha-alpha dipyridyl test. Plot located in shallow, poorly drained depression.

Habitat ID: H-040
Habitat Type: PFO

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☑ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☑ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☑ Yes ☐ No Depth (Inches): 2
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Five primary indicators and one secondary indicator of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 124

Tree stratum (Plot size : 30)	Absolute % Cover	Dominant Species?	Indicator Status

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 4 (A)

Total Number of Dominant Species Across All Strata: 4 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	50	x 2 =	100
FAC Species	50	x 3 =	150
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	250 (B)

Prevalence Index = B/A = 2.50

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 124

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features

Hydric Soil Present? Yes ☐ No ☑

Remarks:

The soils parameter is not met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 5/27/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 127
Investigator(s): KK, MJ
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.028222
Long: -93.887214
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Aris complex, 0 to 1 percent slopes, rarely flooded
NWI Classification: PFO1A
Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No Hydric Soils Present? ☑ Yes ☐ No Wetland Hydrology Present? ☑ Yes ☐ No	Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland swale.

Habitat ID: H-082
Habitat Type: PEM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☑ Yes ☐ No Depth (Inches): 2
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)
Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Four primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 127

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 3 (A)

Total Number of Dominant Species Across All Strata: 3 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	70	x 1 =	70
FACW Species	30	x 2 =	60
FAC Species	0	x 3 =	0
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	130 (B)

Prevalence Index = B/A = 1.30

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 127

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10YR 4/1	80	7.5YR 5/6	20	C	M	Silty Clay	

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains.

[2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

☐ Histosol (A1)
☐ Histic Epipedon (A2)

Hydric Soil Present? Yes ☐ No ☑

Remarks:

The soils parameter is not met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 5/27/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 130
Investigator(s): KK, MJ
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Convex
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.027345
Long: -93.881289
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Urban land complex, 0 to 2 percent slopes, rarely flooded
NWI Classification: PFO1A
Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No Hydric Soils Present? ☐ Yes ☑ No Wetland Hydrology Present? ☐ Yes ☑ No	Is the Sampled Area within the Wetland? Yes: ☐ No: ☑

Remarks:
Hydrophytic vegetation was observed; however, hydrology and hydric soils were not. The sample plot is not within a wetland.

Habitat ID:
Habitat Type: Upland

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☐ Surface Water
- ☐ High Water Table
- ☐ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☐ Yes ☑ No Depth (Inches): 0
Water Table Present? ☐ Yes ☑ No Depth (Inches): >16
Saturation Present? ☐ Yes ☑ No Depth (Inches): >16
(includes capillary fringe)
Wetland Hydrology Present?: Yes ☐ No ☑

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
No indicators of hydrology were present. The hydrology parameter is not met.

Vegetation - Use scientific names of plants.

Sampling Point: 130

Tree stratum (Plot size : 30)	Absolute % Cover	Dominant Species?	Indicator Status
1. *Triadica sebifera*	30	Yes	FAC

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 5 (A)

Total Number of Dominant Species Across All Strata: 5 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	40	x 2 =	80
FAC Species	72	x 3 =	216
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	112	(A)	296 (B)

Prevalence Index = B/A = 2.64

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%
Yes Prevalence Index is ≤3.0[1]
No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 130

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10YR 3/2	100					Silty Clay	

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

Hydric Soil Present? Yes ☐ No ☑

Remarks:
The soils parameter is not met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 5/27/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 133
Investigator(s): KK, MJ
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.027461
Long: -93.879111
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Urban land complex, 0 to 2 percent slopes, rarely flooded
NWI Classification: None

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☑ Yes ☐ No
Wetland Hydrology Present? ☑ Yes ☐ No

Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-086
Habitat Type: PEM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☑ Yes ☐ No Depth (Inches): 2
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Four primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met. The sample plot is located within a vegetated drainage ditch adjacent to roadway.

Vegetation - Use scientific names of plants.

Sampling Point: 133

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant Species Across All Strata: 1 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	95	x 1 =	95
FACW Species	5	x 2 =	10
FAC Species	0	x 3 =	0
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	105 (B)

Prevalence Index = B/A = 1.05

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 133

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 5/27/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 136
Investigator(s): KK, MJ
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.027421
Long: -93.877434
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Urban land complex, 0 to 2 percent slopes, rarely flooded
NWI Classification: None
Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☑ Yes ☐ No
Wetland Hydrology Present? ☑ Yes ☐ No

Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-089
Habitat Type: PFO

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☑ Yes ☐ No Depth (Inches): 3
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Four primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met. The sample plot is located within a forested wetland located along ground level pipeline surrounded by herbaceous wetlands.

Vegetation - Use scientific names of plants.

Sampling Point: 136

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 3 (A)

Total Number of Dominant Species Across All Strata: 3 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	20	x 1 =	20
FACW Species	0	x 2 =	0
FAC Species	80	x 3 =	240
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	260 (B)

Prevalence Index = B/A = 2.60

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 136

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Hydric Soil Present? Yes ☐ No ☑

Remarks:

The soils parameter is not met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 5/28/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 139
Investigator(s): KK, MJ
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Convex
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.026975
Long: -93.874617
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Urban land complex, 0 to 2 percent slopes, rarely flooded
NWI Classification: None

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)

Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No

Are "Normal Circumstances" Present? ☑ Yes ☐ No

Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No

(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present?	☑ Yes ☐ No	Is the Sampled Area within the Wetland? Yes: ☐ No: ☑
Hydric Soils Present?	☐ Yes ☑ No	
Wetland Hydrology Present?	☐ Yes ☑ No	

Remarks:
Hydrophytic vegetation was observed; however, hydrology and hydric soils were not. The sample plot is not within a wetland.

Habitat ID:

Habitat Type: Upland

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☐ Surface Water
- ☐ High Water Table
- ☐ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	☐ Yes ☑ No	Depth (Inches): 0
Water Table Present?	☐ Yes ☑ No	Depth (Inches): >16
Saturation Present? (includes capillary fringe)	☐ Yes ☑ No	Depth (Inches): >16

Wetland Hydrology Present?: Yes ☐ No ☑

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
No indicators of hydrology were present. The hydrology parameter is not met. The sample plot is located within an upland slope adjacent to shallow swale wetland.

Vegetation - Use scientific names of plants.

Sampling Point: 139

That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant
Species Across All Strata: 3 (B)

Percent of Dominant Species
That are OBL, FACW, or FAC: 67% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:		
OBL Species	20	x 1 =	20	
FACW Species	20	x 2 =	40	
FAC Species	0	x 3 =	0	
FACU Species	60	x 4 =	240	
UPL Species	0	x 5 =	0	
Column Totals:	100	(A)	300	(B)

Prevalence Index = B/A = 3.00

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%
Yes Prevalence Index is ≤3.0[1]
No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 139

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Orange
Sampling Date: 5/28/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Texas
Sampling Point: 142
Investigator(s): KK, MJ
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 30.027283
Long: -93.871570
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Orcadia-Urban land complex, 0 to 2 percent slopes, rarely flooded
NWI Classification: None
Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present?	☑ Yes ☐ No	Is the Sampled Area within the Wetland? Yes: ☑ No: ☐
Hydric Soils Present?	☑ Yes ☐ No	
Wetland Hydrology Present?	☑ Yes ☐ No	

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-096
Habitat Type: PFO

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks (B1)
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	☑ Yes ☐ No	Depth (Inches): 0.5
Water Table Present?	☑ Yes ☐ No	Depth (Inches): 0
Saturation Present? (includes capillary fringe)	☑ Yes ☐ No	Depth (Inches): 0

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Four primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met. The sample plot is located within a forested wetland adjacent to wetland drainage feature.

Vegetation - Use scientific names of plants.

Sampling Point: 142

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 3 (A)

Total Number of Dominant Species Across All Strata: 3 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	40	x 1 =	40
FACW Species	60	x 2 =	120
FAC Species	100	x 3 =	300
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	200	(A)	460 (B)

Prevalence Index = B/A = 2.30

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 142

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10YR 4/2	90	7.5YR 5/6	10	C	M	Silty Clay	

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains.

[2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)

Hydric Soil Present? Yes ☐ No ☑

Remarks:
The soils parameter is not met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Cameron
Sampling Date: 6/1/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Louisiana
Sampling Point: 145
Investigator(s): H.Kelly, M.Jay
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 29.818580
Long: -93.623308
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Bancker muck, 0 to 0.2 percent slopes, very frequently flooded
NWI Classification: E2EM1Ps
Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☑ Yes ☐ No
Wetland Hydrology Present? ☑ Yes ☐ No
Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-126
Habitat Type: E2EM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☑ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of two required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☑ Yes ☐ No Depth (Inches): 2
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)
Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Five primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 145

Dominance Test Worksheet:

Number of Dominant Species
That Are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant
Species Across All Strata: 1 (B)

Percent of Dominant Species
That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	0	x 1 =	0
FACW Species	100	x 2 =	200
FAC Species	0	x 3 =	0
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	200 (B)

Prevalence Index = B/A = 2.00

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%
Yes Prevalence Index is ≤3.0[1]
No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 145

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Cameron
Sampling Date: 6/1/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Louisiana
Sampling Point: 148
Investigator(s): H.Kelly, M.Jay
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 29.819456
Long: -93.642842
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Bancker muck, 0 to 0.2 percent slopes, very frequently flooded
NWI Classification: E2EM1Ps

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)

Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No

Are "Normal Circumstances" Present? ☑ Yes ☐ No

Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No

(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No Hydric Soils Present? ☑ Yes ☐ No Wetland Hydrology Present? ☑ Yes ☐ No	Is the Sampled Area within the Wetland?	Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-123

Habitat Type: E2EM

Hydrology

Wetland Hydrology Indicators:

Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☑ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? ☑ Yes ☐ No Depth (Inches): 2
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Five primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 148

FAC Species	0	x 3 =	0	
FACU Species	0	x 4 =	0	
UPL Species	0	x 5 =	0	
Column Totals:	100	(A)	100	(B)

Prevalence Index = B/A = 1.00

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%
Yes Prevalence Index is ≤3.0[1]
No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ No: ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL Sampling Point: 148

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 4/1	85	10 YR 5/6	15	C	M	Clayey Silt

Depth (inches):

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Cameron
Sampling Date: 6/1/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Louisiana
Sampling Point: 151
Investigator(s): H.Kelly, M.Jay
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 29.820309
Long: -93.654945
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Bancker muck, 0 to 0.2 percent slopes, very frequently flooded
NWI Classification: E2EM1Ns

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☑ Yes ☐ No
Wetland Hydrology Present? ☑ Yes ☐ No

Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-123
Habitat Type: E2EM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☑ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☑ Yes ☐ No Depth (Inches): 2
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Five primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 151

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant Species Across All Strata: 1 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:		
OBL Species	100	x 1 =	100	
FACW Species	0	x 2 =	0	
FAC Species	0	x 3 =	0	
FACU Species	0	x 4 =	0	
UPL Species	0	x 5 =	0	
Column Totals:	100	(A)	100	(B)

Prevalence Index = B/A = 1.00

Hydrophytic Vegetation Indicators:

Yes	Dominance Test is >50%
Yes	Prevalence Index is ≤3.0[1]
No	Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 151

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 4/1	85	10 YR 5/6	15	C	M	Clayey Silt	

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains.

[2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)

Depth (inches):

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Cameron
Sampling Date: 6/1/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Louisiana
Sampling Point: 154
Investigator(s): H.Kelly, M.Jay
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 29.821552
Long: -93.674398
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Bancker muck, 0 to 0.2 percent slopes, very frequently flooded
NWI Classification: E2EM1N

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☑ Yes ☐ No
Wetland Hydrology Present? ☑ Yes ☐ No

Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-123
Habitat Type: E2EM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery

- ☐ Water-Stained Leaves
- ☑ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☑ Yes ☐ No Depth (Inches): 2
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Five primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 154

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant Species Across All Strata: 1 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:		
OBL Species	100	x 1 =	100	
FACW Species	0	x 2 =	0	
FAC Species	0	x 3 =	0	
FACU Species	0	x 4 =	0	
UPL Species	0	x 5 =	0	
Column Totals:	100	(A)	100	(B)

Prevalence Index = B/A = 1.00

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL Sampling Point: 154

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 4/1	85	10 YR 5/6	15	C	M	Clayey Silt

Depth (inches):

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Cameron
Sampling Date: 6/1/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Louisiana
Sampling Point: 157
Investigator(s): H.Kelly, M.Jay
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 29.822044
Long: -93.682196
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Bancker muck, 0 to 0.2 percent slopes, very frequently flooded
NWI Classification: E2EM1N

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present?	☑ Yes ☐ No	Is the Sampled Area within the Wetland?
Hydric Soils Present?	☑ Yes ☐ No	Yes: ☑
Wetland Hydrology Present?	☑ Yes ☐ No	No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-124
Habitat Type: E2EM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☑ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	☑ Yes ☐ No	Depth (Inches): 2
Water Table Present?	☑ Yes ☐ No	Depth (Inches): 0
Saturation Present? (includes capillary fringe)	☑ Yes ☐ No	Depth (Inches): 0

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Five primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 157

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant Species Across All Strata: 2 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	50	x 1 =	50
FACW Species	50	x 2 =	100
FAC Species	0	x 3 =	0
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	100 (A)		150 (B)

Prevalence Index = B/A = 1.50

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL Sampling Point: 157

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 4/1	85	10 YR 5/6	15	C	M	Clayey Silt

Hydric Soil Present? Yes ☑ No ☐

Remarks:
The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Cameron
Sampling Date: 6/1/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Louisiana
Sampling Point: 160
Investigator(s): H.Kelly, M.Jay
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 29.822523
Long: -93.690727
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Bancker muck, 0 to 0.2 percent slopes, very frequently flooded
NWI Classification: E2EM1N

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☑ Yes ☐ No
Wetland Hydrology Present? ☑ Yes ☐ No

Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-123
Habitat Type: E2EM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☑ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	☑ Yes	☐ No	Depth (Inches): 2
Water Table Present?	☑ Yes	☐ No	Depth (Inches): 0
Saturation Present? (includes capillary fringe)	☑ Yes	☐ No	Depth (Inches): 0

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Five primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 160

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant Species Across All Strata: 1 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	100	x 1 =	100
FACW Species	0	x 2 =	0
FAC Species	0	x 3 =	0
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	100 (B)

Prevalence Index = B/A = 1.00

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 160

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 4/1	85	10 YR 5/6	15	C	M	Clayey Silt	

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2] Location: PL=Pore Lining, M=Matrix.

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Cameron
Sampling Date: 6/1/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Louisiana
Sampling Point: 163
Investigator(s): H.Kelly, M.Jay
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 29.823123
Long: -93.700067
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Bancker muck, 0 to 0.2 percent slopes, very frequently flooded
NWI Classification: E2EM1N
Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☑ Yes ☐ No
Wetland Hydrology Present? ☑ Yes ☐ No

Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-123
Habitat Type: E2EM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☑ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☑ Yes ☐ No Depth (Inches): 2
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Five primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 163

Dominance Test Worksheet:

Number of Dominant Species
That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant
Species Across All Strata: 2 (B)

Percent of Dominant Species
That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	98	x 1 =	98
FACW Species	2	x 2 =	4
FAC Species	0	x 3 =	0
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	102 (B)

Prevalence Index = B/A = 1.02

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%
Yes Prevalence Index is ≤3.0[1]
No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 163

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 4/1	85	10 YR 5/6	15	C	M	Clayey Silt	

[1]Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2]Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

☐ Histosol (A1)
☐ Histic Epipedon (A2)
☐ Black Histic (A3)
☐ Hydrogen Sulfide (A4)
☐ Stratified Layers (A5)
☐ Organic Bodies (A6) (LRR P, T, U)
☐ 5 cm Mucky Mineral (A7) (LRR P, T, U)
☐ Mucky Presence (A8) (LRR P, T, U)
☐ 1 cm Muck (A9) (LLR P, T)
☐ Depleted Below Dark Surface (A11)
☐ Thick Dark Surface (A12)
☐ Coast Prairie Redox (A16) (MLRA
☐ Sandy Mucky Mineral (S1) (LRR O, S)
☐ Sandy Gleyed Matrix (S4)
☐ Sandy Redox (S5)
☐ Stripped Matrix (S6)
☐ Dark Surface (S7) (LRR P, S, T, U)

☐ Polyvalue Below Surface (S8) (LRR S,T,
☐ Thin Dark Surface (S9) (LRR S, T, U)
☐ Loamy Mucky Mineral (F1) (LRR O)
☐ Loamy Gleyed Matrix (F2)
☑ Depleted Matrix (F3)
☐ Redox Dark Surface (F6)
☐ Depleted Dark Surface (F7)
☐ Redox Depressions (F8)
☐ Marl (F10) (LRR U)
☐ Depleted Ochric (F11) (MLRA 151)
☐ Iron-Manganese Masses (F12) (LRR O, P, T)
☐ Umbric Surface (F13) (LRR P, T, U)
☐ Delta Ochric (F17) (MLRA 151)
☐ Reduced Vertic (F18) (MLRA 150A, 150B)
☐ Piedmont Floodplain Soils (F19) (MLRA 149A)
☐ Anomalous Bright Loamy Soils (F20) (MLRA 149A, 153C, 153D)

Indicators for Problematic Hydric Soils[3]:

☐ 1 cm Muck (A9) (LRR O)
☐ 2 cm Muck (A10) (LRR S)
☐ Reduced Vertic (F18) (outside MLRA
☐ Piedmont Floodplain Soils (F19) (LRR P, S, T)
☐ Anomalous Bright Loamy Soils (F20)
(MLRA 153B)
☐ Red Parent Material (TF2)
☐ Very Shallow Dark Surface (TF12) (LLR T,
☐ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type:

Depth (inches):

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 29.823626
Long: -93.708212
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Bancker muck, 0 to 0.2 percent slopes, very frequently flooded
NWI Classification: E2EM1N
Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☑ Yes ☐ No
Wetland Hydrology Present? ☑ Yes ☐ No

Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-123
Habitat Type: E2EM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☑ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☑ Yes ☐ No Depth (Inches): 8
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Five primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 166

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant Species Across All Strata: 1 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:		
OBL Species	100	x 1 =	100	
FACW Species	0	x 2 =	0	
FAC Species	0	x 3 =	0	
FACU Species	0	x 4 =	0	
UPL Species	0	x 5 =	0	
Column Totals:	100	(A)	100	(B)

Prevalence Index = B/A = 1.00

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 166

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 4/1	85	10 YR 5/6	15	C	M	Clayey Silt	

[1]Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2]Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

☐ Histosol (A1)
☐ Histic Epipedon (A2)
☐ Black Histic (A3)
☐ Hydrogen Sulfide (A4)
☐ Stratified Layers (A5)
☐ Organic Bodies (A6) (LRR P, T, U)
☐ 5 cm Mucky Mineral (A7) (LRR P, T, U)
☐ Mucky Presence (A8) (LRR P, T, U)
☐ 1 cm Muck (A9) (LLR P, T)
☐ Depleted Below Dark Surface (A11)
☐ Thick Dark Surface (A12)
☐ Coast Prairie Redox (A16) (MLRA
☐ Sandy Mucky Mineral (S1) (LRR O, S)
☐ Sandy Gleyed Matrix (S4)
☐ Sandy Redox (S5)
☐ Stripped Matrix (S6)
☐ Dark Surface (S7) (LRR P, S, T, U)

☐ Polyvalue Below Surface (S8) (LRR S,T,
☐ Thin Dark Surface (S9) (LRR S, T, U)
☐ Loamy Mucky Mineral (F1) (LRR O)
☐ Loamy Gleyed Matrix (F2)
☑ Depleted Matrix (F3)

Soil Map Unit Name: Bancker muck, 0 to 0.2 percent slopes, very frequently flooded
NWI Classification: E2EM1N

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No Hydric Soils Present? ☑ Yes ☐ No Wetland Hydrology Present? ☑ Yes ☐ No	Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-123
Habitat Type: E2EM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☑ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☑ Yes ☐ No Depth (Inches): 2
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)
Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Five primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met. Plot located on spoilberm.

Vegetation - Use scientific names of plants.

Sampling Point: 169

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 4 (A)

Total Number of Dominant Species Across All Strata: 4 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	40	x 1 =	40
FACW Species	60	x 2 =	120
FAC Species	0	x 3 =	0
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	160 (B)

Prevalence Index = B/A = 1.60

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 169

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 4/1	90	10 YR 5/6	10	C	M	Clayey Silt	

[1]Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2]Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

☐ Histosol (A1)
☐ Histic Epipedon (A2)
☐ Black Histic (A3)
☐ Hydrogen Sulfide (A4)
☐ Stratified Layers (A5)
☐ Organic Bodies (A6) (LRR P, T, U)
☐ 5 cm Mucky Mineral (A7) (LRR P, T, U)
☐ Mucky Presence (A8) (LRR P, T, U)
☐ 1 cm Muck (A9) (LLR P, T)
☐ Depleted Below Dark Surface (A11)
☐ Thick Dark Surface (A12)
☐ Coast Prairie Redox (A16) (MLRA
☐ Sandy Mucky Mineral (S1) (LRR O, S)
☐ Sandy Gleyed Matrix (S4)
☐ Sandy Redox (S5)
☐ Stripped Matrix (S6)
☐ Dark Surface (S7) (LRR P, S, T, U)

☐ Polyvalue Below Surface (S8) (LRR S,T,
☐ Thin Dark Surface (S9) (LRR S, T, U)
☐ Loamy Mucky Mineral (F1) (LRR O)

Hydrophytic vegetation present? ☑ Yes ☐ No Hydric Soils Present? ☑ Yes ☐ No Wetland Hydrology Present? ☑ Yes ☐ No	Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-121	Habitat Type: E2EM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☑ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☑ Yes ☐ No Depth (Inches): 3
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Five primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 172

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant Species Across All Strata: 1 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	100	x 1 =	100
FACW Species	0	x 2 =	0
FAC Species	0	x 3 =	0
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	100 (B)

Prevalence Index = B/A = 1.00

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 172

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 4/1	90	10 YR 5/6	10	C	M	Clayey Silt	

[1]Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2]Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ Organic Bodies (A6) (LRR P, T, U)
- ☐ 5 cm Mucky Mineral (A7) (LRR P, T, U)
- ☐ Mucky Presence (A8) (LRR P, T, U)
- ☐ 1 cm Muck (A9) (LLR P, T)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Coast Prairie Redox (A16) (MLRA
- ☐ Sandy Mucky Mineral (S1) (LRR O, S)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)
- ☐ Dark Surface (S7) (LRR P, S, T, U)
- ☐ Polyvalue Below Surface (S8) (LRR S,T,
- ☐ Thin Dark Surface (S9) (LRR S, T, U)
- ☐ Loamy Mucky Mineral (F1) (LRR O)
- ☐ Loamy Gleyed Matrix (F2)
- ☑ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Marl (F10) (LRR U)
- ☐ Depleted Ochric (F11) (MLRA 151)
- ☐ Iron-Manganese Masses (F12) (LRR O, P, T)
- ☐ Umbric Surface (F13) (LRR P, T, U)
- ☐ Delta Ochric (F17) (MLRA 151)
- ☐ Reduced Vertic (F18) (MLRA 150A, 150B)
- ☐ Piedmont Floodplain Soils (F19) (MLRA 149A)
- ☐ Anomalous Bright Loamy Soils (F20) (MLRA 149A, 153C, 153D)

Indicators for Problematic Hydric Soils[3]:

- ☐ 1 cm Muck (A9) (LRR O)
- ☐ 2 cm Muck (A10) (LRR S)
- ☐ Reduced Vertic (F18) (outside MLRA
- ☐ Piedmont Floodplain Soils (F19) (LRR P, S, T)
- ☐ Anomalous Bright Loamy Soils (F20)

(MLRA 153B)

- ☐ Red Parent Material (TF2)
- ☐ Very Shallow Dark Surface (TF12) (LLR T,
- ☐ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Depth (inches):

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Cameron
Sampling Date: 6/1/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Louisiana
Sampling Point: 173
Investigator(s): H.Kelly, M.Jay
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 29.824762
Long: -93.726448
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Bancker muck, 0 to 0.2 percent slopes, very frequently flooded
NWI Classification: E2EM1N

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☑ Yes ☐ No
Wetland Hydrology Present? ☑ Yes ☐ No

Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-121
Habitat Type: E2EM

Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☑ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	☑ Yes ☐ No	Depth (Inches): 3
Water Table Present?	☑ Yes ☐ No	Depth (Inches): 0
Saturation Present? (includes capillary fringe)	☑ Yes ☐ No	Depth (Inches): 0

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Five primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 175

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant Species Across All Strata: 1 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:		
OBL Species	100	x 1 =	100	
FACW Species	0	x 2 =	0	
FAC Species	0	x 3 =	0	
FACU Species	0	x 4 =	0	
UPL Species	0	x 5 =	0	
Column Totals:	100	(A)	100	(B)

Prevalence Index = B/A = 1.00

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 175

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 4/1	90	10 YR 5/6	10	C	M	Clayey Silt	

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

☐ Histosol (A1)
☐ Histic Epipedon (A2)
☐ Black Histic (A3)
☐ Hydrogen Sulfide (A4)
☐ Stratified Layers (A5)
☐ Organic Bodies (A6) (LRR P, T, U)
☐ 5 cm Mucky Mineral (A7) (LRR P, T, U)
☐ Mucky Presence (A8) (LRR P, T, U)
☐ 1 cm Muck (A9) (LLR P, T)
☐ Depleted Below Dark Surface (A11)
☐ Thick Dark Surface (A12)
☐ Coast Prairie Redox (A16) (MLRA
☐ Sandy Mucky Mineral (S1) (LRR O, S)
☐ Sandy Gleyed Matrix (S4)
☐ Sandy Redox (S5)
☐ Stripped Matrix (S6)
☐ Dark Surface (S7) (LRR P, S, T, U)

☐ Polyvalue Below Surface (S8) (LRR S,T,
☐ Thin Dark Surface (S9) (LRR S, T, U)
☐ Loamy Mucky Mineral (F1) (LRR O)
☐ Loamy Gleyed Matrix (F2)
☑ Depleted Matrix (F3)
☐ Redox Dark Surface (F6)
☐ Depleted Dark Surface (F7)
☐ Redox Depressions (F8)
☐ Marl (F10) (LRR U)

☐ Iron-Manganese Masses (F12) (LRR O, P, T)
☐ Umbric Surface (F13) (LRR P, T, U)
☐ Delta Ochric (F17) (MLRA 151)
☐ Reduced Vertic (F18) (MLRA 150A, 150B)
☐ Piedmont Floodplain Soils (F19) (MLRA 149A)
☐ Anomalous Bright Loamy Soils (F20) (MLRA 149A, 153C, 153D)

Indicators for Problematic Hydric Soils[3]:

☐ 1 cm Muck (A9) (LRR O)
☐ 2 cm Muck (A10) (LRR S)
☐ Reduced Vertic (F18) (outside MLRA
☐ Piedmont Floodplain Soils (F19) (LRR P, S, T)
☐ Anomalous Bright Loamy Soils (F20)

(MLRA 153B)

☐ Red Parent Material (TF2)
☐ Very Shallow Dark Surface (TF12) (LLR T,
☐ Other (Explain in Remarks)

[3] Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type:

Depth (inches):

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Cameron
Sampling Date: 6/1/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Louisiana
Sampling Point: 176
Investigator(s): H.Kelly, M.Jay
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 29.825241
Long: -93.734039
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Creole mucky clay
NWI Classification: E2EM1N

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present?	☑ Yes ☐ No	Is the Sampled Area within the Wetland? Yes: ☑ No: ☐
Hydric Soils Present?	☑ Yes ☐ No	
Wetland Hydrology Present?	☑ Yes ☐ No	

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-121
Habitat Type: E2EM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant Species Across All Strata: 2 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	50	x 1 =	50
FACW Species	50	x 2 =	100
FAC Species	0	x 3 =	0
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	150 (B)

Prevalence Index = B/A = 1.50

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%
Yes Prevalence Index is ≤3.0[1]
No Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 178

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix Color (moist)	Matrix %	Redox Features Color (moist)	Redox Features %	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 4/1	90	10 YR 5/6	10	C	M	Clayey Silt	

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

Hydric Soil Present? Yes ☑ No ☐

Remarks:
The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Cameron
Sampling Date: 6/1/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Louisiana
Sampling Point: 179
Investigator(s): H.Kelly, M.Jay
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 29.825888
Long: -93.744825
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Bancker muck, 0 to 0.2 percent slopes, very frequently flooded
NWI Classification: E2EM1N

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☑ Yes ☐ No
Wetland Hydrology Present? ☑ Yes ☐ No

Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-121
Habitat Type: E2EM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☑ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☑ Yes ☐ No Depth (Inches): 3
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Five primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant Species Across All Strata: 1 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:		
OBL Species	1	x 1 =	1	
FACW Species	99	x 2 =	198	
FAC Species	0	x 3 =	0	
FACU Species	0	x 4 =	0	
UPL Species	0	x 5 =	0	
Column Totals:	100	(A)	199	(B)

Prevalence Index = B/A = 1.99

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 181

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 4/1	90	10 YR 5/6	10	C	M	Clayey Silt	

[1]Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2]Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

☐ Histosol (A1)
☐ Histic Epipedon (A2)
☐ Black Histic (A3)
☐ Hydrogen Sulfide (A4)
☐ Stratified Layers (A5)

Depth (inches):

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Cameron
Sampling Date: 6/1/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Louisiana
Sampling Point: 182
Investigator(s): H.Kelly, M.Jay
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 29.826502
Long: -93.754192
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Bancker muck, 0 to 0.2 percent slopes, very frequently flooded
NWI Classification: E2EM1P5

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No
Hydric Soils Present? ☑ Yes ☐ No
Wetland Hydrology Present? ☑ Yes ☐ No

Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-121
Habitat Type: E2EM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☑ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? ☑ Yes ☐ No Depth (Inches): 4
Water Table Present? ☑ Yes ☐ No Depth (Inches): 0
Saturation Present? ☑ Yes ☐ No Depth (Inches): 0
(includes capillary fringe)

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Five primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Dominance Test Worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant Species Across All Strata: 1 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:		
OBL Species	100	x 1 =	100	
FACW Species	0	x 2 =	0	
FAC Species	0	x 3 =	0	
FACU Species	0	x 4 =	0	
UPL Species	0	x 5 =	0	
Column Totals:	100	(A)	100	(B)

Prevalence Index = B/A = 1.00

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%

Yes Prevalence Index is ≤3.0[1]

No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ No: ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL

Sampling Point: 184

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 4/1	90	10 YR 5/6	10	C	M	Clayey Silt	

[1] Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2] Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

☐ Histosol (A1)
☐ Histic Epipedon (A2)
☐ Black Histic (A3)
☐ Hydrogen Sulfide (A4)
☐ Stratified Layers (A5)
☐ Organic Bodies (A6) (LRR P, T, U)
☐ 5 cm Mucky Mineral (A7) (LRR P, T, U)
☐ Mucky Presence (A8) (LRR P, T, U)
☐ 1 cm Muck (A9) (LLR P, T)
☐ Depleted Below Dark Surface (A11)
☐ Thick Dark Surface (A12)
☐ Coast Prairie Redox (A16) (MLRA
☐ Sandy Mucky Mineral (S1) (LRR O, S)

Depth (inches):

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Cameron
Sampling Date: 6/1/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Louisiana
Sampling Point: 185
Investigator(s): H.Kelly, M.Jay
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 29.826969
Long: -93.762370
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Mermentau clay
NWI Classification: E2EM1P5

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present? ☑ Yes ☐ No Hydric Soils Present? ☑ Yes ☐ No Wetland Hydrology Present? ☑ Yes ☐ No	Is the Sampled Area within the Wetland? Yes: ☑ No: ☐

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-121
Habitat Type: E2EM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

- ☑ Surface Water
- ☑ High Water Table
- ☑ Saturation
- ☐ Water Marks
- ☐ Sediment Deposits
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust
- ☐ Iron Deposits
- ☐ Inundated Visible on Aerial Imagery
- ☐ Water-Stained Leaves
- ☑ Aquatic Fauna
- ☐ Marl Deposits (B15) (LRRU)
- ☐ Hydrogen Sulfide Odor (C1)
- ☑ Oxidized Rhizoshperes in Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soil (C6)
- ☐ Thick Muck Surface (C7)
- ☐ Other

Secondary Indicators (minimum of tw o required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface
- ☐ Drainage Patterns (B10)
- ☐ Moss Trim Lines
- ☐ Dry-Season Water Table
- ☐ Crayfish Burrows
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	☑ Yes ☐ No	Depth (Inches):	4
Water Table Present?	☑ Yes ☐ No	Depth (Inches):	0
Saturation Present? (includes capillary fringe)	☑ Yes ☐ No	Depth (Inches):	0

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Five primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Dominance Test Worksheet:

Number of Dominant Species
That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant
Species Across All Strata: 2 (B)

Percent of Dominant Species
That are OBL, FACW, or FAC: 100% (B/A)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL Species	80	x 1 =	80
FACW Species	20	x 2 =	40
FAC Species	0	x 3 =	0
FACU Species	0	x 4 =	0
UPL Species	0	x 5 =	0
Column Totals:	100	(A)	120 (B)

Prevalence Index = B/A = 1.20

Hydrophytic Vegetation Indicators:

Yes Dominance Test is >50%
Yes Prevalence Index is ≤3.0[1]
No Problematic Hydrophytic Vegetation[1] (Explain)

[1] Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody Plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3 ft (1m) in height.

Woody Vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present?

Yes: ☑ **No:** ☐

Remarks: (if observed, list morphological adaptations below).
Percentage of dominant plants that are OBL, FACW, and FAC is greater than or equal to 50%.

SOIL Sampling Point: 187

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-16	10 YR 4/1	90	10 YR 5/6	10	C	M	Clayey Silt	

[1]Type: C=Concentration, D=Depletion, RM-Reduced Matrix, CS=Covered or Coated Sand Grains. [2]Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ Organic Bodies (A6) (LRR P, T, U)
- ☐ 5 cm Mucky Mineral (A7) (LRR P, T, U)
- ☐ Mucky Presence (A8) (LRR P, T, U)
- ☐ 1 cm Muck (A9) (LLR P, T)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Coast Prairie Redox (A16) (MLRA
- ☐ Sandy Mucky Mineral (S1) (LRR O, S)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)
- ☐ Dark Surface (S7) (LRR P, S, T, U)
- ☐ Polyvalue Below Surface (S8) (LRR S,T,
- ☐ Thin Dark Surface (S9) (LRR S, T, U)
- ☐ Loamy Mucky Mineral (F1) (LRR O)
- ☐ Loamy Gleyed Matrix (F2)
- ☑ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Marl (F10) (LRR U)
- ☐ Depleted Ochric (F11) (MLRA 151)
- ☐ Iron-Manganese Masses (F12) (LRR O, P, T)
- ☐ Umbric Surface (F13) (LRR P, T, U)
- ☐ Delta Ochric (F17) (MLRA 151)
- ☐ Reduced Vertic (F18) (MLRA 150A, 150B)
- ☐ Piedmont Floodplain Soils (F19) (MLRA 149A)
- ☐ Anomalous Bright Loamy Soils (F20) (MLRA 149A, 153C, 153D)

Indicators for Problematic Hydric Soils[3]:

- ☐ 1 cm Muck (A9) (LRR O)
- ☐ 2 cm Muck (A10) (LRR S)
- ☐ Reduced Vertic (F18) (outside MLRA
- ☐ Piedmont Floodplain Soils (F19) (LRR P, S, T)
- ☐ Anomalous Bright Loamy Soils (F20)

(MLRA 153B)

- ☐ Red Parent Material (TF2)
- ☐ Very Shallow Dark Surface (TF12) (LLR T,
- ☐ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type:

Depth (inches):

Hydric Soil Present? Yes ☑ No ☐

Remarks:

The soils parameter is met.

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region - Version 2.0

Project Site: Blue Marlin Offshore Port Project
City/ County: Cameron
Sampling Date: 6/1/2020
Applicant/Owner: Blue Marlin Offshore Port LLC
State: Louisiana
Sampling Point: 188
Investigator(s): H.Kelly, M.Jay
Section, Township, Range:
Landform (hillside, terrace, etc.): Plain
Local relief (concave, convex, none): Concave
Slope (%): <1
Subregion (LRRA or MLRA): LRR-T
Lat: 29.827510
Long: -93.771216
Datum: NAD 83, Decimal Degrees
Soil Map Unit Name: Bancker muck, 0 to 0.2 percent slopes, very frequently flooded
NWI Classification: E2EM1P5

Are climatic/hydrological conditions on the site typical for this time of year? ☑ Yes ☐ No (If no, explain in Remarks)
Are Vegetation, Soil, or Hydrology significantly disturbed? ☐ Yes ☑ No
Are "Normal Circumstances" Present? ☑ Yes ☐ No
Are Vegetation, Soil, or Hydrology naturally problematic? ☐ Yes ☑ No
(If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS- Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic vegetation present?	☑ Yes ☐ No	Is the Sampled Area within the Wetland? Yes: ☑ No: ☐
Hydric Soils Present?	☑ Yes ☐ No	
Wetland Hydrology Present?	☑ Yes ☐ No	

Remarks:
All three parameters, hydrophytic vegetation, hydrology and hydric soils were met. The sample plot is within a wetland.

Habitat ID: H-118
Habitat Type: E2EM

Hydrology

Wetland Hydrology Indicators:
Primary indicators (minimum of one required; check all that apply)

☑ Surface Water
☑ High Water Table
☑ Saturation
☐ Water Marks
☐ Sediment Deposits
☐ Drift Deposits (B3)
☐ Algal Mat or Crust
☐ Iron Deposits
☐ Inundated Visible on Aerial Imagery

☐ Water-Stained Leaves
☑ Aquatic Fauna
☐ Marl Deposits (B15) (LRRU)
☐ Hydrogen Sulfide Odor (C1)
☑ Oxidized Rhizoshperes in Living Roots (C3)
☐ Presence of Reduced Iron (C4)
☐ Recent Iron Reduction in Tilled Soil (C6)
☐ Thick Muck Surface (C7)
☐ Other

Secondary Indicators (minimum of tw o required)
☐ Surface Soil Cracks (B6)
☐ Sparsely Vegetated Concave Surface
☐ Drainage Patterns (B10)
☐ Moss Trim Lines
☐ Dry-Season Water Table
☐ Crayfish Burrows
☐ Saturation Visible on Aerial Imagery (C9)
☐ Geomorphic Position (D2)
☐ Shallow Aquitard (D3)
☐ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	☑ Yes ☐ No	Depth (Inches): 4
Water Table Present?	☑ Yes ☐ No	Depth (Inches): 0
Saturation Present? (includes capillary fringe)	☑ Yes ☐ No	Depth (Inches): 0

Wetland Hydrology Present?: Yes ☑ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Five primary indicators and no secondary indicators of hydrology were observed. The hydrology parameter is met.

Vegetation - Use scientific names of plants.

Sampling Point: 188
